# Introduction

## Background

The 2010 edition of the National Model Construction Codes is presented in a format called “objective-based codes” that is structured in three Divisions (A, B and C). The Codes contain explicitly defined objectives and functional statements (see Division A), which are statements on the functions that the components of a building must perform and the objectives that these functions must satisfy. Most of the Code provisions in Division B—called acceptable solutions—are linked to at least one of those objectives and functional statements.

The objectives and functional statements are developed through a process called “bottom-up analysis,” which involves the analysis of each provision in Division B of the Codes to determine its intent followed by the derivation of applicable objectives and functional statements.

The bottom-up analysis is carried out by the standing committees of the Canadian Commission on Building and Fire Codes (CCBFC) with extensive support from the staff of the Canadian Codes Centre (CCC). The technical changes that were incorporated into Division B of the 2010 Codes also underwent the same bottom-up analysis.

*NOTA: Application statements were published along with intent statements for the 2005 edition of the Codes. Intent and application statements, which are additional, non-mandatory information and not an integral part of the Codes, provide guidance to Code users. The intent statements contain useful information not available elsewhere that helps users understand the rationale behind each requirement. This contributes to a more accurate interpretation and application of acceptable solutions and a clearer understanding of what alternative solutions should achieve.*

*Unlike intent statements, application statements repeat the Code provisions in whole or in part and contain information that can be derived from reading related Code requirements. Following a review of the information in the application statements, and given the significant effort required to update them each Code cycle, the CCBFC concluded that maintaining the application statements was an unproductive use of resources and has therefore discontinued their publication.*

The intent statements are included in the on-line versions of the 2010 Codes and are also available for viewing by users of the printed versions of the Codes.

## Understanding the Content of the Supplement to the NBC 2010: Intent Statements

Only the provisions in Parts 3 to 9 of Division B (i.e. the acceptable solutions not including their Appendix Notes) have intent statements and, if applicable, objectives and functional statements.

Clicking on a Sentence reference in the left-hand portion of the screen brings up an analysis window on the right-hand side, which contains that Sentence’s applicable objectives, attributions and intent statements.

### **Code Reference**

For the most part, entire Sentences are analyzed as units of text. However, in some instances, the analysis applies to only a portion of a Sentence; in such cases, the Clause or Subclause being analyzed is identified in the field entitled “Attribution” or the portion of text being analyzed is quoted or summarized in that field and introduced by the phrase “Applies to.”

### **Objective**

The objectives attributed to the provisions or portions of provisions in Division B are derived from the bottom-up analysis. Each analysis window contains tabs displaying the acronyms for each objective attributed to the text being analyzed. Clicking on a tab reveals a panel containing the information related to that objective attribution, e.g. OH1 Indoor Conditions.

Some provisions or portions of provisions in Division B have no objectives attributed to them. In such instances, the tab will display the symbol “+” rather than an objective such as OH1, OS3, etc. See a related discussion below under “Intent.”

### **Attribution**

The specific functional statements and sub-objectives attributed to the text being analyzed are presented in square brackets in the Attribution field. If the attributions and analysis (i.e. intent and application statements) apply to the entire Sentence, no explanatory text will appear before or after the square brackets; if they apply to only a portion of a Sentence, the square brackets will either be preceded by the Clause or Subclause identifier, or followed by a phrase beginning with “Applies to,” which specifies which portion of the Sentence the attributions and analysis apply to.

### **Intent**

An intent statement explains the purpose of a provision or portion of provision found in Division B. It reveals what the standing committee was trying to achieve by introducing the Code provision in the first place or what the Code-user community has come to understand as the reason for the provision's existence.

Generally speaking, intent statements present the consequences of non-compliance with a requirement. They try to answer the question “What are the undesirable thing(s) that might happen if this provision is not complied with?” In many cases, the initial consequences of non-compliance may lead to a chain of consequences; the link between those consequences and the overall objective of the provision may only become apparent in the description of the latter consequences in the chain. All functional statements and objectives identified in Division A and attributed to the provisions in Division B of the 2010 Codes are derived from the intent statements.

Not all Code provisions are technical requirements; some act as definitions, clarifications, application modifiers or pointers to another provision. In such cases, the intent statement explains the role the provision plays in the Code and there is no chain of consequences. These types of provisions have no objectives or functional statements attributed to them. Appendix Note A-1.1.2.1.(1) in Division B of the Code provides information on how these types of provisions shall be interpreted in regards to their relation to objectives and functional statements.

Serious effort was put into using a consistent, logical approach and standardized set of phrases and terms in the development of the intent statements. It is the ongoing responsibility of the standing committees to maintain, update and improve the intent and application statements over time. Any suggestions towards these endeavours are welcome.

#### **“To Limit the Probability”**

Many of the hazards and undesirable events the Codes address, such as deterioration, spread of fire and heat loss, can only be minimized, retarded or controlled through compliance; other undesirable events such as the ignition of fire or structural collapse can never be prevented with absolute assurance. This is why the phrase “to limit the probability” is used in the intent statements rather than “to prevent.”

Using the phrase “to prevent” would mean that it is possible to comply fully with a requirement but still not meet its intent. The phrase “to limit the probability” was therefore adopted to clearly convey the notion that the Codes do not and cannot provide absolute protection.

Intent statements for Part 5 and Part 9 of Division B of the NBC 2010

### **Level of Detail**

In the development of the intent statements for Part 5 and Part 9, it was recognized that:

- non-compliance with a requirement in those Parts could have several adverse consequences,
- the immediately apparent adverse consequence(s) may not be the first or most likely to occur, nor the most serious, and
- one adverse consequence may lead to others that should also be identified.

Describing the logical progression of consequences—from the basic property or performance issue addressed by the provision through to the objectives—resulted in intent statements for some Part 5 and Part 9 provisions that are longer and more detailed than those for provisions in other Parts of the NBC.

Furthermore, some building elements addressed by Part 9 provisions may serve a variety of functions depending on the design of the building. In these cases, intent statements were developed for each function that the building element might serve.

### **Failure vs. Premature Failure**

Virtually all components of a building will eventually fail in the absence of maintenance, and many will eventually fail even with maintenance. This normal, expected failure cannot be addressed by code provisions. However, many NBC provisions do address premature failure—failure that occurs at a time when the component would be expected to continue to perform its function without special maintenance. These provisions do not specify an expected service life (i.e. acceptable lifespan) for a material, component or assembly; in general, they prescribe performance criteria, material properties or service conditions that are expected to provide a reasonable service life (e.g. material type, thickness of a protective coating, minimum temperature of air contacting furnace heat exchangers). Only Sentence 4.1.1.3.(1) and Clause 5.1.4.1.(4)(b) in Division B refer explicitly to service life or to a time period over which a component is expected to perform, without stating a precise minimum period.

The intent statements for all provisions that promote resistance to deterioration describe the consequences of premature failure that would result from failing to comply with the respective requirement.

### **Failure of Required Environmental Separation Elements**

All intent statements describe the initial consequences of non-conformance with a Code provision. Many intent statements also describe a chain of consequences in cases where posterior consequences may be more severe than the initial hazard. One such scenario is the failure of environmental separation elements.

Many hazards that could result from non-compliance with Part 5 and Part 9, such as condensation and the ingress of precipitation, would not only initially lead to adverse health effects but might also lead to the eventual deterioration of building elements, which can, in turn, lead to a multiplicity of negative effects on the performance of required environmental separation elements. Rather than including a detailed description of each and every specific potential effect in the applicable intent statements, the Standing Committee on Housing and Small Buildings and the Standing Committee on Environmental Separation chose the phrase “which could lead to compromised integrity of environmental separators” to capture the concept of broader adverse performance implications.

Because environmental separators provide protection from issues like water ingress and condensation, they protect structural elements from rot, corrosion and conditions conducive to the infiltration of destructive insects. Consequently, most Code provisions dealing with environmental separation elements have a structural safety intent and objective as well as a health intent and objective.

### **Failure of Structural Elements in Environmental Separators**

Other scenarios involve environmental separation elements that also have a structural role and structural elements within environmental separators. In addition to describing the potential direct consequences of loss of structural integrity or structural collapse, the intent statements also describe the chain of consequences that would occur if only the environmental separation function were compromised. A comprehensive analysis of all these compromised functions would, however, increase the volume of text to such a degree that the standing committees decided to summarize the multiplicity of consequences with the phrase “failure of required environmental separation elements.” Thus, many Code provisions that mainly address structural issues also have health objectives stemming from the failure of required environmental separation elements.

### **Format of Health-Related Intents in Part 5 and Part 9**

In many intent statements related to the OH1 Objective, Indoor Conditions, negative effects beyond the initial consequences of non-conformance are identified in sets of short bulleted lists rather than in continuous, full-

length sentences. Each item listed represents a consequence that is as likely to occur as another at this point in the chain of consequences. There is no direct correlation between the order in which the consequences are presented in these lists and the order and certainty of their occurring; each consequence identified in one set will potentially lead to at least one of the consequences in the subsequent set. This approach using simplified lists was implemented to improve the readability of the intent statements and to reduce their length.

## Defined Terms

### 1) The words and terms in italics in this Code have the following meanings:

*Access to exit* means that part of a means of egress within a floor area that provides access to an exit serving the floor area.

*Adfreezing* means the adhesion of soil to a foundation unit resulting from the freezing of soil water. (Also referred to as “frost grip.”)

*Air barrier system* means the assembly installed to provide a continuous barrier to the movement of air.

*Air-supported structure* means a structure consisting of a pliable membrane which achieves and maintains its shape and support by internal air pressure.

*Alarm signal* means an audible signal transmitted throughout a zone or zones or throughout a building to advise occupants that a fire emergency exists.

*Alert signal* means an audible signal to advise designated persons of a fire emergency.

*Alteration* means a change or extension to any matter or thing or to any occupancy regulated by this Code.

*Appliance* means a device to convert fuel into energy and includes all components, controls, wiring and piping required to be part of the device by the applicable standard referred to in this Code.

*Artesian groundwater* means a confined body of water under pressure in the ground.

*Assembly occupancy* means the occupancy or the use of a building, or part thereof, by a gathering of persons for civic, political, travel, religious, social, educational, recreational or like purposes, or for the consumption of food or drink.

*Attic or roof space* means the space between the roof and the ceiling of the top storey or between a dwarf wall and a sloping roof.

*Authority having jurisdiction* means the governmental body responsible for the enforcement of any part of this Code or the official or agency designated by that body to exercise such a function.

*Barrier-free* means that a building and its facilities can be approached, entered, and used by persons with physical or sensory disabilities.

*Basement* means a storey or storeys of a building located below the first storey.

*Bearing surface* means the contact surface between a foundation unit and the soil or rock upon which it bears.

*Boiler* means an appliance intended to supply hot water or steam for space heating, processing or power purposes.

*Braced wall band* means an imaginary continuous straight band extending vertically and horizontally through the building or part of the building, within which braced wall panels are constructed.

*Braced wall panel* means a portion of a wood-frame wall where bracing, sheathing, cladding or interior finish is designed and installed to provide the required resistance to lateral loads due to wind or earthquake.

*Breeching* means a flue pipe or chamber for receiving flue gases from one or more flue connections and for discharging these gases through a single flue connection.

*Building* means any structure used or intended for supporting or sheltering any use or occupancy.

*Building area* means the greatest horizontal area of a building above grade within the outside surface of exterior walls or within the outside surface of exterior walls and the centre line of firewalls.

*Building height* (in storeys) means the number of storeys contained between the roof and the floor of the first storey.

*Business and personal services occupancy* means the occupancy or use of a building or part thereof for the transaction of business or the rendering or receiving of professional or personal services.

*Caisson* (see Pile).

*Care* means the provision of services other than treatment by or through care facility management to residents who require these services because of cognitive, physical or behavioural limitations.

*Care occupancy* means the occupancy or use of a building or part thereof where care is provided to residents. (See Appendix A.)

*Cavity wall* means a construction of masonry units laid with a cavity between the wythes. The wythes are tied together with metal ties or bonding units, and are relied on to act together in resisting lateral loads.

*Chimney* means a primarily vertical shaft enclosing at least one flue for conducting flue gases to the outdoors.

*Chimney liner* means a conduit containing a chimney flue used as a lining of a masonry or concrete chimney.

*Closure* means a device or assembly for closing an opening through a fire separation or an exterior wall, such as a door, a shutter, wired glass or glass block, and includes all components such as hardware, closing devices, frames and anchors.

*Combustible* means that a material fails to meet the acceptance criteria of CAN/ULC-S114, "Test for Determination of Non-Combustibility in Building Materials."

*Combustible construction* means that type of construction that does not meet the requirements for noncombustible construction.

*Combustible dusts* means dusts and particles that are ignitable and liable to produce an explosion.

*Combustible fibres* means finely divided, combustible vegetable or animal fibres and thin sheets or flakes of such materials which, in a loose, unbaled condition, present a flash fire hazard, including cotton, wool, hemp, sisal, jute, kapok, paper and cloth.

*Combustible liquid* means a liquid having a flash point at or above 37.8°C and below 93.3°C.

*Conditioned space* means any space within a building the temperature of which is controlled to limit variation in response to the exterior ambient temperature by the provision, either directly or indirectly, of heating or cooling over substantial portions of the year.

*Constructor* means a person who contracts with an owner or their authorized agent to undertake a project, and includes an owner who contracts with more than one person for the work on a project or undertakes the work on a project or any part thereof.

*Contained use area* means a supervised area containing one or more rooms in which occupant movement is restricted to a single room by security measures not under the control of the occupant.

*Cooktop* means a cooking surface having one or more burners or heating elements.

*Dangerous goods* means those products or substances that are regulated by the “Transportation of Dangerous Goods Regulations.” (See Table 3.2.7.1. of Division B of the NFC.)

*Dead load* means the weight of all permanent structural and non-structural components of a building.

*Deep foundation* means a foundation unit that provides support for a building by transferring loads either by end-bearing to soil or rock at considerable depth below the building, or by adhesion or friction, or both, in the soil or rock in which it is placed. Piles are the most common type of deep foundation.

*Designer* means the person responsible for the design.

*Detention occupancy* means the occupancy by persons who are restrained from or are incapable of evacuating to a safe location without the assistance of another person because of security measures not under their control.

*Distillery* means a process plant where distilled beverage alcohols are produced, concentrated or otherwise processed, and includes facilities on the same site where the concentrated products may be blended, mixed, stored or packaged.

*Distilled beverage alcohol* means a beverage that is produced by fermentation and contains more than 20% by volume of water-miscible alcohol.

*Direct-vented* (as applying to a fuel-fired space- or water-heating appliance) means an appliance and its venting system in which all the combustion air is supplied directly from the outdoors and the products of combustion are vented directly to the outdoors via independent, totally enclosed passageways connected directly to the appliance.

*Dwelling unit* means a suite operated as a housekeeping unit, used or intended to be used by one or more persons and usually containing cooking, eating, living, sleeping and sanitary facilities.

*Excavation* means the space created by the removal of soil, rock or fill for the purposes of construction.

*Exhaust duct* means a duct through which air is conveyed from a room or space to the outdoors.

*Exit* means that part of a means of egress, including doorways, that leads from the floor area it serves to a separate building, an open public thoroughfare, or an exterior open space protected from fire exposure from the building and having access to an open public thoroughfare. (See Appendix A.)

*Exit level* means the level of an exit stairway at which an exterior exit door or exit passageway leads to the exterior.

*Exit storey* (as applying to Subsection 3.2.6. of Division B) means a storey having an exterior exit door.

*Exposing building face* means that part of the exterior wall of a building that faces one direction and is located between ground level and the ceiling of its top storey or, where a building is divided into fire compartments, the exterior wall of a fire compartment that faces one direction.

*Factory-built chimney* means a chimney consisting entirely of factory-made parts, each designed to be assembled with the other without requiring fabrication on site.

*Farm building* means a building or part thereof that does not contain a residential

occupancy and that is associated with and located on land devoted to the practice of farming, and used essentially for the housing of equipment or livestock, or the production, storage or processing of agricultural and horticultural produce or feeds. (See Appendix A.)

*Fill* means soil, rock, rubble, industrial waste such as slag, organic material or a combination of these that is transported and placed on the natural surface of soil or rock or organic terrain. It may or may not be compacted.

*Fire block* means a material, component or system that restricts the spread of fire within a concealed space or from a concealed space to an adjacent space.

*Fire compartment* means an enclosed space in a building that is separated from all other parts of the building by enclosing construction providing a fire separation having a required fire-resistance rating.

*Fire damper* means a closure consisting of a damper that is installed in an air distribution system or a wall or floor assembly and that is normally held open but designed to close automatically in the event of a fire in order to maintain the integrity of the fire separation.

*Fire detector* means a device that detects a fire condition and automatically initiates an electrical signal to actuate an alert signal or alarm signal and includes heat detectors and smoke detectors.

*Fire load* (as applying to an occupancy) means the combustible contents of a room or floor area expressed in terms of the average weight of combustible materials per unit area, from which the potential heat liberation may be calculated based on the calorific value of the materials, and includes the furnishings, finished floor, wall and ceiling finishes, trim and temporary and movable partitions.

*Fire-protection rating* means the time in minutes or hours that a closure will withstand the passage of flame when exposed to fire under specified conditions of test and performance criteria, or as otherwise prescribed in this Code.

*Fire-resistance rating* means the time in minutes or hours that a material or assembly of materials will withstand the passage of flame and the transmission of heat when exposed to fire under specified conditions of test and performance criteria, or as determined by extension or interpretation of information derived therefrom as prescribed in this Code. (See Appendix Note D-1.2.1.(2) of Division B.)

*Fire-retardant-treated wood* means wood or a wood product that has had its surface-burning characteristics, such as flame spread, rate of fuel contribution and density of smoke developed, reduced by impregnation with fire-retardant chemicals.

*Fire separation* means a construction assembly that acts as a barrier against the spread of fire. (See Appendix A.)

*Fire stop* means a system consisting of a material, component and means of support used to fill gaps between fire separations or between fire separations and other assemblies, or used around items that wholly or partially penetrate a fire separation.

*Fire stop flap* means a device intended for use in horizontal assemblies required to have a fire-resistance rating and incorporating protective ceiling membranes, which operates to close off a duct opening through the membrane in the event of a fire.

*Firewall* means a type of fire separation of noncombustible construction that subdivides a building or separates adjoining buildings to resist the spread of fire and that has a fire-resistance rating as prescribed in this Code and has structural stability to remain intact under fire conditions for the required fire-rated time.

*First storey* means the uppermost storey having its floor level not more than 2 m above grade.

*Flame-spread rating* means an index or classification indicating the extent of spread-of-flame on the surface of a material or an assembly of materials as determined in a standard fire test as prescribed in this Code.

*Flammable liquid* means a liquid having a flash point below 37.8°C and having a vapour pressure not more than 275.8 kPa (absolute) at 37.8°C as determined by

*Flash point* means the minimum temperature at which a liquid within a container gives off vapour in sufficient concentration to form an ignitable mixture with air near the surface of the liquid.

*Floor area* means the space on any storey of a building between exterior walls and required firewalls, including the space occupied by interior walls and partitions, but not including exits, vertical service spaces, and their enclosing assemblies.

*Flue* means an enclosed passageway for conveying flue gases.

*Flue collar* means the portion of a fuel-fired appliance designed for the attachment of the flue pipe or breeching.

*Flue pipe* means the pipe connecting the flue collar of an appliance to a chimney.

*Forced-air furnace* means a furnace equipped with a fan that provides the primary means for the circulation of air.

*Foundation* means a system or arrangement of foundation units through which the loads from a building are transferred to supporting soil or rock.

*Foundation unit* means one of the structural members of the foundation of a building such as a footing, raft or pile.

*Frost action* means the phenomenon that occurs when water in soil is subjected to freezing which, because of the water/ice phase change or ice lens growth, results in a total volume increase or the build-up of expansive forces under confined conditions or both, and the subsequent thawing that leads to loss of soil strength and increased compressibility.

*Furnace* means a space-heating appliance using warm air as the heating medium and usually having provision for the attachment of ducts.

*Gas vent* means that portion of a venting system designed to convey vent gases to the outdoors from the vent connector of a gas-fired appliance or directly from the appliance when a vent connector is not used.

*Grade* means the lowest of the average levels of finished ground adjoining each exterior wall of a building, except that localized depressions need not be considered in the determination of average levels of finished ground. (See First storey and Appendix A.)

*Groundwater* means a free standing body of water in the ground.

*Groundwater level* (groundwater table) means the top surface of a free standing body of water in the ground.

*Guard* means a protective barrier around openings in floors or at the open sides of stairs, landings, balconies, mezzanines, galleries, raised walkways or other locations to prevent accidental falls from one level to another. Such a barrier may or may not have openings through it.

*Heat detector* means a fire detector designed to operate at a predetermined temperature or rate of temperature rise.

*Heavy timber construction* means that type of combustible construction in which a degree of fire safety is attained by placing limitations on the sizes of wood structural members and on the thickness and composition of wood floors and roofs and by the avoidance of concealed spaces under floors and roofs.

*High-hazard industrial occupancy* (Group F, Division 1) means an industrial occupancy containing sufficient quantities of highly combustible and flammable or explosive materials which, because of their inherent characteristics, constitute a special fire hazard.

*Horizontal exit* means an exit from one building to another by means of a doorway, vestibule, walkway, bridge or balcony.

*Horizontal service space* means a space such as an attic, duct, ceiling, roof or crawl space oriented essentially in a horizontal plane, concealed and generally inaccessible, through which building service facilities such as pipes, ducts and wiring may pass.

*Impeded egress zone* means a supervised area in which occupants have free movement but require the release, by security personnel, of security doors at the boundary before they are able to leave the area, but does not include a contained use area.

*Indirect service water heater* means a service water heater that derives its heat from a heating medium such as warm air, steam or hot water.

*Industrial occupancy* means the occupancy or use of a building or part thereof for the assembling, fabricating, manufacturing, processing, repairing or storing of goods and materials.

*Interconnected floor space* means superimposed floor areas or parts of floor areas in which floor assemblies that are required to be fire separations are penetrated by openings that are not provided with closures.

*Limiting distance* means the distance from an exposing building face to a property line, the centre line of a street, lane or public thoroughfare, or to an imaginary line between 2 buildings or fire compartments on the same property, measured at right angles to the exposing building face.

*Live load* means a variable load due to the intended use and occupancy that is to be assumed in the design of the structural members of a building. It includes loads due to cranes and the pressure of liquids in containers.

*Loadbearing* (as applying to a building element) means subjected to or designed to carry loads in addition to its own dead load, excepting a wall element subjected only to wind or earthquake loads in addition to its own dead load.

*Low-hazard industrial occupancy* (Group F, Division 3) means an industrial occupancy in which the combustible content is not more than  $50 \text{ kg/m}^2$  or  $1\,200 \text{ MJ/m}^2$  of floor area.

*Major occupancy* means the principal occupancy for which a building or part thereof is used or intended to be used, and shall be deemed to include the subsidiary occupancies that are an integral part of the principal occupancy. The major occupancy classifications used in this Code are as follows:

- A1 Assembly occupancies intended for the production and viewing of the performing arts
- A2 Assembly occupancies not elsewhere classified in Group A
- A3 Assembly occupancies of the arena type
- A4 Assembly occupancies in which the occupants are gathered in the open air
- B1 Detention occupancies in which persons are under restraint or are incapable of self-preservation because of security measures not under their control
- B2 Treatment occupancies

B3	Care occupancies
C	Residential occupancies
D	Business and personal services occupancies
E	Mercantile occupancies
F1	High-hazard industrial occupancies
F2	Medium-hazard industrial occupancies
F3	Low-hazard industrial occupancies

*Masonry or concrete chimney* means a chimney of brick, stone, concrete or masonry units constructed on site.

*Means of egress* means a continuous path of travel provided for the escape of persons from any point in a building or contained open space to a separate building, an open public thoroughfare, or an exterior open space protected from fire exposure from the building and having access to an open public thoroughfare. Means of egress includes exits and access to exits.

*Mechanically vented* (as applying to a fuel-fired space- or water-heating appliance) means an appliance and its combustion venting system in which the products of combustion are entirely exhausted to the outdoors by a mechanical device, such as a fan, blower or aspirator, upstream or downstream from the combustion zone of the appliance, and the portion of the combustion venting system that is downstream of the fan, blower or aspirator is sealed and does not include draft hoods or draft control devices. (See Appendix A.)

*Medium-hazard industrial occupancy* (Group F, Division 2) means an industrial occupancy in which the combustible content is more than 50 kg/m<sup>2</sup> or 1 200 MJ/m<sup>2</sup> of floor area and not classified as a high-hazard industrial occupancy.

*Mercantile occupancy* means the occupancy or use of a building or part thereof for the displaying or selling of retail goods, wares or merchandise.

*Mezzanine* means an intermediate floor assembly between the floor and ceiling of any room or storey and includes an interior balcony.

*Noncombustible* means that a material meets the acceptance criteria of

*Noncombustible construction* means that type of construction in which a degree of fire safety is attained by the use of noncombustible materials for structural members and other building assemblies.

*Occupancy* means the use or intended use of a building or part thereof for the shelter or support of persons, animals or property.

*Occupant load* means the number of persons for which a building or part thereof is designed.

*Open-air storey* means a storey in which at least 25% of the total area of its perimeter walls is open to the outdoors in a manner that will provide cross-ventilation to the entire storey.

*Owner* means any person, firm or corporation controlling the property under consideration.

*Partition* means an interior wall 1 storey or part-storey in height that is not loadbearing.

*Party wall* means a wall jointly owned and jointly used by 2 parties under easement agreement or by right in law, and erected at or upon a line separating 2 parcels of land each of which is, or is capable of being, a separate real-estate entity.

*Perched groundwater* means a free standing body of water in the ground extending to a

limited depth.

*Pile* means a slender deep foundation unit made of materials such as wood, steel or concrete or a combination thereof, that is either premanufactured and placed by driving, jacking, jetting or screwing, or cast-in-place in a hole formed by driving, excavating or boring. (Cast-in-place bored piles are often referred to as caissons in Canada.)

*Plenum* means a chamber forming part of an air duct system.

*Plumbing system* means a drainage system, a venting system and a water system or parts thereof.

*Post-disaster building* means a building that is essential to the provision of services in the event of a disaster, and includes

- hospitals, emergency treatment facilities and blood banks,
- telephone exchanges,
- power generating stations and electrical substations,
- control centres for air, land and marine transportation,
- public water treatment and storage facilities, and pumping stations,
- sewage treatment facilities and buildings having critical national defence functions, and
- buildings of the following types, unless exempted from this designation by the authority having jurisdiction:
  - emergency response facilities,
  - fire, rescue and police stations and housing for vehicles, aircraft or boats used for such purposes, and
  - communications facilities, including radio and television stations.

(See Appendix A.)

*Private sewage disposal system* means a privately owned plant for the treatment and disposal of sewage (such as a septic tank with an absorption field).

*Process plant* means an industrial occupancy where materials, including flammable liquids, combustible liquids, or gases, are produced or used in a process. (See Table 3.2.7.1. of Division B of the NFC.)

*Protected floor space* means that part of a floor area protected from the effects of fire and used as part of a means of egress from an interconnected floor space.

*Public corridor* means a corridor that provides access to exit from more than one suite. (See Appendix A.)

*Public way* means a sidewalk, street, highway, square or other open space to which the public has access, as of right or by invitation, expressed or implied.

*Repair garage* means a building or part thereof where facilities are provided for the repair or servicing of motor vehicles.

*Residential occupancy* means the occupancy or use of a building or part thereof by persons for whom sleeping accommodation is provided but who are not harboured for the purpose of receiving care or treatment and are not involuntarily detained.

*Return duct* means a duct for conveying air from a space being heated, ventilated or air-conditioned back to the heating, ventilating or air-conditioning appliance.

*Rim joist* means the outermost member in floor framing, other than blocking, be it parallel, perpendicular or on an angle to the floor joists. (See Appendix A.)

*Rock* means that portion of the earth's crust that is consolidated, coherent and relatively hard and is a naturally formed, solidly bonded, mass of mineral matter that cannot readily

be broken by hand.

*Sanitary drainage system* means a drainage system that conducts sewage.

*Secondary suite* means a self-contained dwelling unit with a prescribed floor area located in a building or portion of a building of only residential occupancy that contains only one other dwelling unit and common spaces, and where both dwelling units constitute a single real estate entity. (See Appendix A and Article 9.1.2.1. of Division B.)

*Service room* means a room provided in a building to contain equipment associated with building services. (See Appendix A.)

*Service space* means space provided in a building to facilitate or conceal the installation of building service facilities such as chutes, ducts, pipes, shafts or wires.

*Service water heater* means a device for heating water for plumbing services.

*Shallow foundation* means a foundation unit that derives its support from soil or rock located close to the lowest part of the building that it supports.

*Smoke alarm* means a combined smoke detector and audible alarm device designed to sound an alarm within the room or suite in which it is located upon the detection of smoke within that room or suite.

*Smoke detector* means a fire detector designed to operate when the concentration of airborne combustion products exceeds a predetermined level.

*Soil* means that portion of the earth's crust that is fragmentary, or such that some individual particles of a dried sample may be readily separated by agitation in water; it includes boulders, cobbles, gravel, sand, silt, clay and organic matter.

*Space heater* means a space-heating appliance for heating the room or space within which it is located, without the use of ducts.

*Space-heating appliance* means an appliance intended for the supplying of heat to a room or space directly, such as a space heater, fireplace or unit heater, or to rooms or spaces of a building through a heating system such as a central furnace or boiler.

*Sprinklered* (as applying to a building or part thereof) means that the building or part thereof is equipped with a system of automatic sprinklers.

*Stage* means a space that is designed primarily for theatrical performances with provision for quick change scenery and overhead lighting, including environmental control for a wide range of lighting and sound effects and that is traditionally, but not necessarily, separated from the audience by a proscenium wall and curtain opening.

*Storage garage* means a building or part thereof intended for the storage or parking of motor vehicles and containing no provision for the repair or servicing of such vehicles. (See Appendix A.)

*Storage-type service water heater* means a service water heater with an integral hot water storage tank.

*Storey* means that portion of a building that is situated between the top of any floor and the top of the floor next above it, and if there is no floor above it, that portion between the top of such floor and the ceiling above it.

*Stove* means an appliance intended for cooking and space heating.

*Street* means any highway, road, boulevard, square or other improved thoroughfare 9 m or more in width, that has been dedicated or deeded for public use and is accessible to fire department vehicles and equipment.

*Subsurface investigation* means the appraisal of the general subsurface conditions at a building site by analysis of information gained by such methods as geological surveys, in situ testing, sampling, visual inspection, laboratory testing of samples of the subsurface materials and groundwater observations and measurements.

*Suite* means a single room or series of rooms of complementary use, operated under a single tenancy, and includes dwelling units, individual guest rooms in motels, hotels, boarding houses, rooming houses and dormitories as well as individual stores and individual or complementary rooms for business and personal services occupancies. (See Appendix A.)

*Supply duct* means a duct for conveying air from a heating, ventilating or air-conditioning appliance to a space to be heated, ventilated or air-conditioned.

*Theatre* means a place of public assembly intended for the production and viewing of the performing arts or the screening and viewing of motion pictures, and consisting of an auditorium with permanently fixed seats intended solely for a viewing audience.

*Treatment* means the provision of medical or other health-related intervention to persons, where the administration or lack of administration of these interventions may render them incapable of evacuating to a safe location without the assistance of another person. (See Appendix A.)

*Treatment occupancy* means the occupancy or use of a building or part thereof for the provision of treatment, and where overnight accommodation is available to facilitate the treatment. (See Appendix A.)

*Unit heater* means a suspended space heater with an integral air-circulating fan.

*Unprotected opening* (as applying to exposing building face) means a doorway, window or opening other than one equipped with a closure having the required fire-protection rating, or any part of a wall forming part of the exposing building face that has a fire-resistance rating less than that required for the exposing building face.

*Unsafe condition* means any condition that could cause undue hazard to the life, limb or health of any person authorized or expected to be on or about the premises.

*Unstable liquid* means a liquid, including flammable liquids and combustible liquids, that is chemically reactive to the extent that it will vigorously react or decompose at or near normal temperature and pressure conditions or that is chemically unstable when subjected to impact.

*Vapour barrier* means the elements installed to control the diffusion of water vapour.

*Vent connector* (as applying to heating or cooling systems) means the part of a venting system that conducts the flue gases or vent gases from the flue collar of a gas appliance to the chimney or gas vent, and may include a draft control device.

*Vertical service space* means a shaft oriented essentially vertically that is provided in a building to facilitate the installation of building services including mechanical, electrical and plumbing installations and facilities such as elevators, refuse chutes and linen chutes.

*Walkway* means a covered or roofed pedestrian thoroughfare used to connect 2 or more buildings.

## Objectives

1) The objectives of this Code are as follows (see Appendix A):

### OS Safety

An objective of this Code is to limit the probability that, as a result of the design, construction or demolition of the building, a person in or adjacent to the building will be exposed to an unacceptable risk of injury.

#### **OS1 Fire Safety**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in or adjacent to the building will be exposed to an unacceptable risk of injury due to fire. The risks of injury due to fire addressed in this Code are those caused by—

**OS1.1** - fire or explosion occurring

**OS1.2** - fire or explosion impacting areas beyond its point of origin

**OS1.3** - collapse of physical elements due to a fire or explosion

**OS1.4** - fire safety systems failing to function as expected

**OS1.5** - persons being delayed in or impeded from moving to a safe place during a fire emergency

#### **OS2 Structural Safety**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in or adjacent to the building will be exposed to an unacceptable risk of injury due to structural failure. The risks of injury due to structural failure addressed in this Code are those caused by—

**OS2.1** - loads bearing on the building elements that exceed their loadbearing capacity

**OS2.2** - loads bearing on the building that exceed the loadbearing properties of the supporting medium

**OS2.3** - damage to or deterioration of building elements

**OS2.4** - vibration or deflection of building elements

**OS2.5** - instability of the building or part thereof

**OS2.6** - collapse of the excavation

#### **OS3 Safety in Use**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in or adjacent to the building will be exposed to an unacceptable risk of injury due to hazards. The risks of injury due to hazards addressed in this Code are those caused by—

**OS3.1** - tripping, slipping, falling, contact, drowning or collision

**OS3.2** - contact with hot surfaces or substances

**OS3.3** - contact with energized equipment

**OS3.4** - exposure to hazardous substances

**OS3.5** - exposure to high levels of sound from fire alarm systems

**OS3.6** - persons becoming trapped in confined spaces

**OS3.7** - persons being delayed in or impeded from moving to a safe place during an emergency (see Appendix A)

#### **OS4 Resistance to Unwanted Entry**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in the building will be exposed to an unacceptable risk of injury due to the building's low level of resistance to unwanted entry (see Sentence 2.1.1.2.(2) for application limitation). The risks of injury due to unwanted entry addressed in this Code are those caused by—

**OS4.1** - intruders being able to force their way through locked doors or windows

**OS4.2** - occupants being unable to identify potential intruders as such

#### **OS5 Safety at Construction and Demolition Sites**

An objective of this Code is to limit the probability that, as a result of the construction or demolition of the building, the public adjacent to a construction or demolition site will be exposed to an unacceptable risk of injury due to hazards. The risks of injury due to construction and demolition hazards addressed in this Code are those caused by—

**OS5.1** - objects projected onto public ways

**OS5.2** - vehicular accidents on public ways

**OS5.3** - damage to or obstruction of public ways

**OS5.4** - water accumulated in excavations

**OS5.5** - entry into the site

**OS5.6** - exposure to hazardous substances and activities

**OS5.7** - loads bearing on a covered way that exceed its loadbearing capacity

**OS5.8** - collapse of the excavation

**OS5.9** - persons being delayed in or impeded from moving to a safe place during an emergency (see Appendix A)

### OH Health

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person will be exposed to an unacceptable risk of illness.

#### **OH1 Indoor Conditions**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in the building will be exposed to an unacceptable risk of illness due to indoor conditions. The risks of illness due to indoor conditions addressed in this Code are those caused by—

**OH1.1** - inadequate indoor air quality

**OH1.2** - inadequate thermal comfort

**OH1.3** - contact with moisture

#### **OH2 Sanitation**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in the building will be exposed to an unacceptable risk of illness due to unsanitary conditions. The risks of illness due to unsanitary conditions addressed in this Code are those caused by—

**OH2.1** - exposure to human or domestic waste

**OH2.2** - consumption of contaminated water

**OH2.3** - inadequate facilities for personal hygiene

**OH2.4** - contact with contaminated surfaces

**OH2.5** - contact with vermin and insects

### **OH3 Noise Protection**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in the building will be exposed to an unacceptable risk of illness due to high levels of sound originating in adjacent spaces in the building (see Sentence 2.1.1.2.(3) for application limitation). The risks of illness due to high levels of sound addressed in this Code are those caused by—

**OH3.1** - exposure to airborne sound transmitted through assemblies separating dwelling units from adjacent spaces in the building

### **OH4 Vibration and Deflection Limitation**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in the building will be exposed to an unacceptable risk of illness due to high levels of vibration or deflection of building elements.

### **OH5 Hazardous Substances Containment**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, the public will be exposed to an unacceptable risk of illness due to the release of hazardous substances from the building (see Sentence 2.1.1.2.(4) for application limitation).

## **OA Accessibility**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person with a physical or sensory limitation will be unacceptably impeded from accessing or using the building or its facilities (see Sentence 2.1.1.2.(5) for application limitations).

### **OA1 Barrier-Free Path of Travel**

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person with a physical or sensory limitation will be unacceptably impeded from accessing the building or circulating within it (see Sentence 2.1.1.2.(5) for application limitations).

### **OA2 Barrier-Free Facilities**

An objective of this Code is to limit the probability that, as a result of the design

or construction of the building, a person with a physical or sensory limitation will be unacceptably impeded from using the building's facilities (see Sentence 2.1.1.2.(5) for application limitations).

## OP Fire and Structural Protection of Buildings

An objective of this Code is to limit the probability that, as a result of the design, construction or demolition of the building, the building or adjacent buildings will be exposed to an unacceptable risk of damage due to fire or structural insufficiency, or the building or part thereof will be exposed to an unacceptable risk of loss of use also due to structural insufficiency.

### OP1 Fire Protection of the Building

An objective of this Code is to limit the probability that, as a result of its design or construction, the building will be exposed to an unacceptable risk of damage due to fire. The risks of damage due to fire addressed in this Code are those caused by—

**OP1.1** - fire or explosion occurring

**OP1.2** - fire or explosion impacting areas beyond its point of origin

**OP1.3** - collapse of physical elements due to a fire or explosion

**OP1.4** - fire safety systems failing to function as expected

### OP2 Structural Sufficiency of the Building

An objective of this Code is to limit the probability that, as a result of its design or construction, the building or part thereof will be exposed to an unacceptable risk of damage or loss of use due to structural failure or lack of structural serviceability. The risks of damage and of loss of use due to structural failure or lack of structural serviceability addressed in this Code are those caused by—

**OP2.1** - loads bearing on the building elements that exceed their loadbearing capacity

**OP2.2** - loads bearing on the building that exceed the loadbearing properties of the supporting medium

**OP2.3** - damage to or deterioration of building elements

**OP2.4** - vibration or deflection of building elements

**OP2.5** - instability of the building or part thereof

**OP2.6** - instability or movement of the supporting medium

### OP3 Protection of Adjacent Buildings from Fire

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, adjacent buildings will be exposed to an unacceptable risk of damage due to fire. The risks of damage to adjacent buildings due to fire addressed in this Code are those caused by—

**OP3.1** - fire or explosion impacting areas beyond the building of origin

### OP4 Protection of Adjacent Buildings from Structural Damage

An objective of this Code is to limit the probability that, as a result of the design,

construction or demolition of the building, adjacent buildings will be exposed to an unacceptable risk of structural damage. The risks of structural damage to adjacent buildings addressed in this Code are those caused by—

**OP4.1** - settlement of the medium supporting adjacent buildings

**OP4.2** - collapse of the building or portion thereof onto adjacent buildings

**OP4.3** - impact of the building on adjacent buildings

**OP4.4** - collapse of the excavation

## Functional Statements

- 1) The objectives of this Code are achieved by measures, such as those described in the acceptable solutions in Division B, that are intended to allow the building or its elements to perform the following functions (see Appendix A):
  - F01** To minimize the risk of accidental ignition.
  - F02** To limit the severity and effects of fire or explosions.
  - F03** To retard the effects of fire on areas beyond its point of origin.
  - F04** To retard failure or collapse due to the effects of fire.
  - F05** To retard the effects of fire on emergency egress facilities.
  - F06** To retard the effects of fire on facilities for notification, suppression and emergency response.
  - F10** To facilitate the timely movement of persons to a safe place in an emergency.
  - F11** To notify persons, in a timely manner, of the need to take action in an emergency.
  - F12** To facilitate emergency response.
  - F13** To notify emergency responders, in a timely manner, of the need to take action in an emergency.
  - F20** To support and withstand expected loads and forces.
  - F21** To limit or accommodate dimensional change.
  - F22** To limit movement under expected loads and forces.
  - F23** To maintain equipment in place during structural movement.
  - F30** To minimize the risk of injury to persons as a result of tripping, slipping, falling, contact, drowning or collision.
  - F31** To minimize the risk of injury to persons as a result of contact with hot surfaces or substances.
  - F32** To minimize the risk of injury to persons as a result of contact with energized equipment.
  - F33** To limit the level of sound of a fire alarm system.
  - F34** To resist or discourage unwanted access or entry.
  - F35** To facilitate the identification of potential intruders.
  - F36** To minimize the risk that persons will be trapped in confined spaces.
  - F40** To limit the level of contaminants.
  - F41** To minimize the risk of generation of contaminants.
  - F42** To resist the entry of vermin and insects.
  - F43** To minimize the risk of release of hazardous substances.
  - F44** To limit the spread of hazardous substances beyond their point of release.
  - F46** To minimize the risk of contamination of potable water.
  - F50** To provide air suitable for breathing.
  - F51** To maintain appropriate air and surface temperatures.
  - F52** To maintain appropriate relative humidity.

- F53** To maintain appropriate indoor/outdoor air pressure differences.
- F54** To limit drafts.
- F55** To resist the transfer of air through environmental separators.
- F56** To limit the transmission of airborne sound into a dwelling unit from spaces elsewhere in the building (see Sentence 3.1.1.2.(2) for application limitation).
- F60** To control the accumulation and pressure of water on and in the ground.
- F61** To resist the ingress of precipitation, water or moisture from the exterior or from the ground.
- F62** To facilitate the dissipation of water and moisture from the building.
- F63** To limit moisture condensation.
- F70** To provide potable water.
- F71** To provide facilities for personal hygiene.
- F72** To provide facilities for the sanitary disposal of human and domestic wastes.
- F73** To facilitate access to and circulation in the building and its facilities by persons with physical or sensory limitations (see Sentence 3.1.1.2.(3) for application limitation).
- F74** To facilitate the use of the building's facilities by persons with physical or sensory limitations (see Sentence 3.1.1.2.(3) for application limitation).
- F80** To resist deterioration resulting from expected service conditions.
- F81** To minimize the risk of malfunction, interference, damage, tampering, lack of use or misuse.
- F82** To minimize the risk of inadequate performance due to improper maintenance or lack of maintenance.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.1.1.1.(1)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 1.3.3. where the application of Part 3 is stated.

---

### **Provision: 3.1.1.2.(1)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Article 1.4.1.2. to provide definitions of italicized words.

---

### **Provision: 3.1.1.4.(1)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 2.2.3. because the provisions of this Subsection are relevant to information to be provided on plans and specifications with regard to fire protection components.

---

### **Provision: 3.1.2.1.(1)**

#### **Intent(s)**

*Intent 1.* To classify buildings or portions of buildings based on use and occupancy, to determine appropriate requirements in the Code.

---

### **Provision: 3.1.2.1.(2)**

#### **Intent(s)**

*Intent 1.* To classify buildings or portions of buildings based on all major uses and occupancies, to determine appropriate requirements in the Code.

---

### **Provision: 3.1.2.2.(1)**

#### **Intent(s)**

*Intent 1.* To classify a building as a single major occupancy if all occupancies fall within a single Group, or a single Division of a Group, to determine appropriate requirements in the Code.

---

### **Provision: 3.1.2.3.(1)**

#### **Intent(s)**

*Intent 1.* To classify arena type buildings as Group A, Division 3 occupancies if they are used for occasional trade shows and exhibitions, and to exempt buildings from the Group E classification requirements of Sentence 3.1.2.1.(1), to determine appropriate requirements in the Code.

---

### **Provision: 3.1.2.4.(1)**

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To classify police stations as Group B, Division 2 major occupancies if they are small, and to exempt these buildings from the Group B, Division 1 classification requirements of Sentence 3.1.2.1.(1). This is to determine appropriate requirements in the Code.

---

**Provision: 3.1.2.5.(1)**

---

**Intent(s)**

*Intent 1.* To classify convalescent homes and children's custodial homes as residential occupancies if they meet certain conditions, and to exempt these buildings from the Group B classification requirements of Sentence 3.1.2.1.(1) based on the limited size and restricted number of occupants. This is to determine appropriate requirements in the Code.

---

**Provision: 3.1.2.6.(1)**

---

**Intent(s)**

*Intent 1.* To classify buildings or parts thereof as medium-hazard industrial occupancies if they are used for the storage of baled combustible fibres. This is to determine appropriate requirements in the Code.

---

**Provision: 3.1.3.1.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire will spread from one major occupancy to an adjacent major occupancy having a different degree of fire risk, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire will spread from one major occupancy to an adjacent major occupancy having a different degree of fire risk, which could lead to damage to the building.

---

**Provision: 3.1.3.1.(2)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To exclude the fire separation between a dwelling unit and a mercantile occupancy from the value of 2 h that would otherwise be required by Sentence 3.1.3.1.(1), and to permit a 1 h fire separation

---

## **Intent Statements: NBC 2010**

on the basis that the limited number of dwelling units and restrictions on height adequately address evacuation times.

---

### **Provision: 3.1.3.1.(3)**

#### **Objective**

OS1

#### **Attributions**

[F02, F03, F06-OS1.2] [F10, F05-OS1.5]

#### **Intent(s)**

*Intent 1.* To exclude from the fire separation requirements of Sentence 3.1.3.1.(1), the plane surrounding an open space between storeys if certain design conditions are met and measures are taken [as described in Articles 3.2.8.2. to 3.2.8.9.] to:

- provide adequate evacuation times,
- control fuel load and fire spread, and
- provide tenable conditions along exit routes and during evacuation and emergency response operations.

This is to limit the probability of harm to persons during a building fire.

---

#### **Objective**

OP1

#### **Attributions**

[F02, F03, F06-OP1.2]

#### **Intent(s)**

*Intent 1.* To exclude from the fire separation requirements of Sentence 3.1.3.1.(1), the plane surrounding an open space between storeys if certain design conditions are met and measures are taken [as described in Articles 3.2.8.2. to 3.2.8.9.] to control fuel load and fire spread. This is to limit the probability of damage to the building.

---

### **Provision: 3.1.3.2.(1)**

#### **Objective**

OS1

#### **Attributions**

[F02, F03-OS1.2] [F10-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that an explosion or rapidly developing fire originating in a high hazard industrial major occupancy will lead to harm to persons in an assembly occupancy, residential occupancy, or care or detention occupancy due to the nature of these occupancies which require extended evacuation time.

**Provision: 3.1.3.2.(2)**

---

**Objective**

OS1

**Attributions**

[F02, F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that an explosion or rapidly developing fire originating in a medium hazard industrial major occupancy will lead to harm to persons in a residential suite.

**Provision: 3.1.4.1.(1)**

---

**Intent(s)**

*Intent 1.* To clarify that Part 3 buildings of combustible construction may be built with combustible materials, with or without noncombustible components.

**Provision: 3.1.4.1.(2)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that combustible insulation having an inappropriately high flame-spread property will be used, which could lead to the growth and spread of fire, which could lead to harm to persons.

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that combustible insulation having an inappropriately high flame-spread property will be used in certain building locations, which could lead to the growth and spread of fire, which could lead to damage to the building.

**Provision: 3.1.4.2.(1)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.1] [F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that foamed plastic insulation will become exposed to a fire or subjected to high temperatures, which could lead to its ignition and contribution to early fire growth and spread,

---

## **Intent Statements: NBC 2010**

which could negatively affect the ability of persons to escape from a fire, which could lead to harm to persons.

*Intent 2.* To state and expand the application of Subsections 9.29.4. to 9.29.9. to buildings to which Part 3 applies [Clause 3.1.4.2.(1)(a)].

*Intent 3.* To expand the application of Sentence 3.1.5.12.(2) to buildings of combustible construction [Clause 3.1.4.2.(1)(c)].

---

### **Objective**

OP1

### **Attributions**

[F01-OP1.1] [F02-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that foamed plastic insulation will become exposed to a fire or subjected to high temperatures, which could lead to its ignition and contribution to early fire growth and spread, which could lead to damage to the building.

*Intent 2.* To state and expand the application of Subsections 9.29.4. to 9.29.9. to buildings to which Part 3 applies [Clause 3.1.4.2.(1)(a)].

*Intent 3.* To expand the application of Sentence 3.1.5.12.(2) to buildings of combustible construction [Clause 3.1.4.2.(1)(c)].

---

## **Provision: 3.1.4.3.(1)**

---

### **Objective**

OS1

### **Attributions**

[F02-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread along the surface of electrical wiring, which could contribute to fire growth and spread, which could lead to harm to persons.

*Intent 2.* To expand the application of Article 3.1.5.20. to buildings of combustible construction [Subclause 3.1.4.3.(1)(b)(iv)].

---

### **Objective**

OP1

### **Attributions**

[F02-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread along the surface of electrical wiring, which could contribute to fire growth and spread, which could lead to damage to the building.

*Intent 2.* To expand the application of Article 3.1.5.20. to buildings of combustible construction [Subclause 3.1.4.3.(1)(b)(iv)].

**Provision: 3.1.4.3.(2)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread along the surface of communication cables, which could contribute to fire growth and spread, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread along the surface of communication cables, which could contribute to fire growth and spread, which could lead to damage to the building.

**Provision: 3.1.4.3.(3)**

---

**Intent(s)**

*Intent 1.* To allow a relaxation of the rating requirements for specific cables and wires in plenum spaces.

**Provision: 3.1.4.4.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Clause 3.1.5.20.(1)(a) to buildings of combustible construction.

**Provision: 3.1.4.5.(1)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire-retardant treated wood will be inadequately treated to give it appropriate fire retardant and flame-spread properties, which could contribute to fire growth and spread, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that fire-retardant treated wood will be inadequately treated to give it appropriate fire retardant and flame-spread properties, which could contribute to fire growth and spread, which could lead to damage to the building.

**Provision: 3.1.4.6.(1)**

---

**Intent(s)**

*Intent 1.* To clarify that heavy timber construction can be substituted for combustible construction otherwise required to have a 45 min fire-resistance rating.

**Provision: 3.1.4.6.(2)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.1.4.7.

**Provision: 3.1.4.7.(1)**

---

**Intent(s)**

*Intent 1.* To describe the arrangement and characteristics of wood elements in heavy timber construction to limit the probability that the wood elements will prematurely fail when subjected to fire, which could lead to premature failure of the remainder of the heavy timber construction.

**Provision: 3.1.4.7.(2)**

---

**Intent(s)**

*Intent 1.* To describe the minimum dimensions of structural members in heavy timber construction to limit the probability that the wood elements will prematurely fail when subjected to fire, which could lead to premature failure of the remainder of the heavy timber construction.

**Provision: 3.1.4.7.(3)**

---

**Intent(s)**

*Intent 1.* To exempt splice plates for roof arches from the application of Sentence 3.1.4.7.(2), which would otherwise require larger dimensions, if certain conditions are met that limit the probability of premature structural failure of the heavy timber construction during a fire.

**Provision: 3.1.4.7.(4)**

---

**Intent(s)**

*Intent 1.* To exempt floors from the application of Sentence 3.1.4.7.(2), which would otherwise require larger dimensions, if certain conditions are met to limit the probability of premature structural failure of the heavy timber construction during a fire.

**Provision: 3.1.4.7.(5)**

---

**Intent(s)**

*Intent 1.* To exempt floors from the application of Sentence 3.1.4.7.(2), which would otherwise require larger dimensions, if certain conditions are met to limit the probability of premature structural failure of the heavy timber construction during a fire.

**Provision: 3.1.4.7.(6)**

---

**Intent(s)**

*Intent 1.* To exempt roofs from the application of Sentence 3.1.4.7.(2), which would otherwise require larger dimensions, if certain conditions are met to limit the probability of premature structural failure of the heavy timber construction during a fire.

**Provision: 3.1.4.7.(7)**

---

**Intent(s)**

*Intent 1.* To describe the continuity requirements for columns used in heavy timber construction to limit the probability of premature structural failure of the heavy timber construction during a fire.

**Provision: 3.1.4.7.(8)**

---

**Intent(s)**

*Intent 1.* To describe the connection requirements for columns to limit the probability of premature structural failure of the heavy timber construction during a fire.

**Provision: 3.1.4.7.(9)**

---

**Intent(s)**

*Intent 1.* To describe the method of connection for beams and girders entering masonry to limit the probability of premature structural failure of the heavy timber construction during a fire.

**Provision: 3.1.4.7.(10)**

---

**Intent(s)**

*Intent 1.* To describe the connection requirements between columns, beams and girders to limit the probability of premature structural failure of the heavy timber construction during a fire.

**Provision: 3.1.4.7.(11)**

---

**Intent(s)**

*Intent 1.* To describe the support requirements for intermediate floor beams to limit the probability of premature structural failure of the heavy timber construction during a fire.

**Provision: 3.1.4.7.(12)**

---

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt roof arches from the application of Sentence 3.1.4.7.(2), which would otherwise require larger dimensions, if certain conditions are met that limit the probability of premature structural failure of the heavy timber construction during a fire.

---

### **Provision: 3.1.5.1.(1)**

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To clarify what constitutes noncombustible construction.

*Intent 2.* To limit the probability that construction materials will contribute to the growth and spread of fire, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F02-OP1.2]

#### **Intent(s)**

*Intent 1.* To clarify what constitutes noncombustible construction.

*Intent 2.* To limit the probability that construction materials will contribute to the growth and spread of fire, which could lead to damage to the building.

---

### **Provision: 3.1.5.1.(2)**

---

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to the growth and spread of fire.

---

### **Provision: 3.1.5.1.(3)**

---

#### **Intent(s)**

*Intent 1.* To clarify the test methodology for materials consisting of a number of discrete layers.

---

### **Provision: 3.1.5.1.(4)**

---

#### **Intent(s)**

*Intent 1.* To clarify the basis for the acceptance criteria for the test mandated in Sentence 3.1.5.1.(3).

---

### **Provision: 3.1.5.2.(1)**

---

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) on the basis that they are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To direct Code users to Sentence 3.1.9.1.(1) and Article 3.1.11.7. for fire stops and fire blocks referred to in Clause 3.1.5.2.(1)(c).

*Intent 3.* To exempt tubing for pneumatic controls as stated in Clause 3.1.5.2.(1)(d) from the application of Sentence 3.1.5.16.(1), which applies to combustibility of tubing.

---

### **Provision: 3.1.5.3.(1)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1), on the basis that they are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To direct Code users to Subsection 3.1.15., which describes the standard methods of fire tests for the determination of roof covering classifications.

---

### **Provision: 3.1.5.3.(2)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1), on the basis that they are deemed to insignificantly contribute to fire growth and spread.

---

#### **Attributions**

3.1.5.3.(2)(c)

#### **Intent(s)**

*Intent 1.* To expand the application of Article 3.1.11.5.

---

### **Provision: 3.1.5.3.(3)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1), on the basis that they are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.3.(4)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.4.(1)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.1.5.4.(2)**

---

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

### **Provision: 3.1.5.4.(3)**

---

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.4.(2), on the basis that the materials could significantly contribute to fire growth and spread.

### **Provision: 3.1.5.4.(4)**

---

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the requirements of Sentence 3.1.5.4.(3) if certain conditions are met, on the basis that the materials could significantly contribute to fire growth and spread.

#### **Attributions**

3.1.5.4.(4)(b)

#### **Intent(s)**

*Intent 1.* To expand the application of Article 3.2.3.17.

### **Provision: 3.1.5.4.(5)**

---

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

### **Provision: 3.1.5.5.(1)**

---

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To state the application of Sentences 3.1.5.5.(3) and 3.1.5.5.(4).

#### **Intent(s)**

*Intent 1.* To expand the application of Sentence 3.1.5.12.(3).

**Provision: 3.1.5.5.(2)**

---

**Objective**

OP3

**Attributions**

[F03, F02-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that an exposing building face will have insufficient fire resistance, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

*Intent 2.* To limit the probability that an exposing building face will be ignited and contribute to a fire, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

**Provision: 3.1.5.5.(3)**

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

**Provision: 3.1.5.5.(4)**

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

**Provision: 3.1.5.5.(5)**

---

**Intent(s)**

*Intent 1.* To clarify that the wall assembly must be subjected to weathering tests before the fire tests to limit the probability that the weathering of the material will negatively effect its ability to minimize fire growth and spread.

**Provision: 3.1.5.6.(1)**

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

**Provision: 3.1.5.7.(1)**

---

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

**Provision: 3.1.5.8.(1)**

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

**Provision: 3.1.5.8.(2)**

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

**Intent(s)**

*Intent 1.* To state the application of Sentence 3.1.11.3.(2).

**Provision: 3.1.5.8.(3)**

---

**Intent(s)**

*Intent 1.* To clarify that certain combustible materials are permitted in buildings on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

**Provision: 3.1.5.8.(4)**

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

**Provision: 3.1.5.9.(1)**

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

**Provision: 3.1.5.10.(1)**

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

**Provision: 3.1.5.10.(2)**

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

**Provision: 3.1.5.10.(3)**

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

**Provision: 3.1.5.11.(1)**

**Intent(s)**

*Intent 1.* To exempt gypsum board from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the combustible component of gypsum board (paper) is deemed to insignificantly contribute to the growth and spread of fire.

---

**Provision: 3.1.5.12.(1)**

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To direct Code users to Sentences 3.1.5.12.(3) and 3.1.5.12.(4).

---

**Provision: 3.1.5.12.(2)**

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

**Provision: 3.1.5.12.(3)**

**Intent(s)**

*Intent 1.* To expand the application of Sentence 3.1.5.12.(2).

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.1.5.12.(4)**

#### **Intent(s)**

*Intent 1.* To expand the application of Sentence 3.1.5.12.(2).

---

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.12.(5)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.12.(6)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To exempt certain combustible materials from the application of Sentences 3.1.5.12.(2), 3.1.5.12.(3) and 3.1.5.12.(4) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 3.* To direct Code users to Subsection 3.1.12. for determining flame-spread ratings.

---

### **Provision: 3.1.5.12.(7)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.13.(1)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.13.(2)**

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To exempt wood framed partitions from the requirements of Sentence 3.1.5.13.(1) if certain conditions are met, on the basis that the partitions are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.13.(3)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.14.(1)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.15.(1)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.15.(2)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To direct Code users to Subsection 3.6.5.

---

### **Provision: 3.1.5.15.(3)**

#### **Intent(s)**

*Intent 1.* To exempt combustible ducts from the requirements of Sentences 3.6.5.1.(1) and 3.6.5.1.(2) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.16.(1)**

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.16.(2)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To exempt combustible sprinkler piping from the application of Sentence 3.1.5.16.(1) if certain conditions are met, on the basis that the piping will still be able to perform its intended function.

---

### **Provision: 3.1.5.16.(3)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To exempt polypropylene pipes and fittings from the application of Sentence 3.1.5.16.(1) if certain conditions are met, on the basis that these materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.17.(1)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.18.(1)**

#### **Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To direct Code users to Clause 3.1.5.20.(1)(b)

---

### **Provision: 3.1.5.18.(2)**

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that fire will spread along the surface of optical fibre cables or electrical wires or cables which could contribute to fire growth and spread, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F02-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread along the surface of communication cables, which could contribute to fire growth and spread, which could lead to damage to the building.

---

### **Provision: 3.1.5.18.(3)**

---

### **Objective**

OS1

### **Attributions**

[F02-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread along the surface of wiring systems, including optical fibre cables or electrical wires or cables for the transmission of voice, sound or data, which could contribute to fire growth and spread, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F02-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread along the surface of wiring systems, including optical fibre cables or electrical wires or cables for the transmission of voice, sound or data which could contribute to fire growth and spread, which could lead to damage to the building.

---

### **Intent(s)**

*Intent 1.* To exempt short exposed wiring drops originating within a plenum from the requirements of Sentence 3.1.5.18.(2) on the basis that the exposed wiring, which extends not more than 9 m from the plenum, is deemed to insignificantly contribute to fire growth and spread.

---

### **Provision: 3.1.5.18.(4)**

---

### **Intent(s)**

*Intent 1.* To allow a relaxation of the rating requirements for specific cables and wires in plenum spaces.

---

### **Provision: 3.1.5.19.(1)**

---

### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

*Intent 2.* To exempt combustible travelling cables on elevating devices from the application of Sentence 3.1.5.18.(1), on the basis that the materials are deemed to insignificantly contribute to fire growth and spread.

---

---

**Intent(s)**

*Intent 1.* To exempt certain combustible materials from the application of Sentence 3.1.5.1.(1) if certain conditions are met, on the basis that the materials are deemed to insignificantly contribute to the growth and spread of fire.

**Provision: 3.1.6.1.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Sections 3.3. and 3.4.

**Provision: 3.1.6.2.(1)**

---

**Objective**

OS3

**Attributions**

[F10, F12, F36-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that collapse of the structure will trap persons within the structure in an emergency, which could lead to excessive delays in evacuation, which could lead to harm to persons.

*Intent 2.* To limit the probability that collapse of the structure will lead to the structure draping down the outside of the building, which could lead to the blocking of exits from the building in an emergency, which could lead to excessive delays in evacuation, which could lead to harm to persons.

*Intent 3.* To limit the probability that collapse of the structure will lead to the structure draping down the outside of the building, which could lead to the blocking of exits from the building in an emergency, which could lead to emergency responders being unable to access the structure in a timely manner, which could lead to ineffective emergency response operations, which could lead to harm to persons.

---

**Objective**

OS2

**Attributions**

[F20-OS2.2]

**Intent(s)**

*Intent 1.* To limit the probability of inadequate anchorage of the structure to the ground or basement, which could lead to collapse of the structure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.1.6.2.(2)**

---

#### **Objective**

OS3

#### **Attributions**

[F10, F36-OS3.7] Applies to portion of Code text: "An *air-supported structure* shall not be used for Groups B, C, ... *major occupancies* or for classrooms."

#### **Intent(s)**

*Intent 1.* To limit the probability that persons who require additional time to evacuate a building will be trapped within the structure in an emergency, which could lead to excessive delays in evacuation, which could lead to harm to persons.

---

#### **Objective**

OS1

#### **Attributions**

[F01, F02, F36-OS1.5] Applies to portion of Code text: "An *air-supported structure* shall not be used for ... Group F, Division 1 *major occupancies* ..."

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire or explosion will lead to collapse of the structure, which could lead to persons becoming trapped within the structure, which could lead to excessive delays in evacuation, which could lead to harm to persons.

### **Provision: 3.1.6.2.(3)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that internal features will contribute to a delay in egress during an emergency involving the collapse of the air-supported structure, which could lead to harm to persons.

### **Provision: 3.1.6.3.(1)**

---

#### **Intent(s)**

*Intent 1.* To expand the application of Subsection 3.2.3.

### **Provision: 3.1.6.3.(2)**

---

#### **Objective**

OS1

#### **Attributions**

3.1.6.3.(2)(a) [F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To exempt such structures from the application of Subsection 3.2.3. if certain conditions are met to provide an acceptable level of protection. This is to limit the probability that:

- a fire in a tent or air-supported structure will spread into another building on the same property, which could lead to harm to persons in the building, and
- a fire in a building will spread into a tent or air-supported structure, which could lead to harm to persons in the tent or air-supported structure.

---

**Objective**

OS3

**Attributions**

3.1.6.3.(2)(b) [F10-OS3.7]

**Intent(s)**

*Intent 1.* To exempt such structures from the application of Subsection 3.2.3. if certain conditions are met to provide an acceptable level of protection. This is to limit the probability that insufficient space for egress will lead to excessive delays in evacuation, which could lead to harm to persons.

---

**Objective**

OP3

**Attributions**

3.1.6.3.(2)(a) [F03-OP3.1]

**Intent(s)**

*Intent 1.* To exempt such structures from the application of Subsection 3.2.3. if certain conditions are met to provide an acceptable level of protection. This is to limit the probability that a fire in a tent or air-supported structure will spread into another building on the same property, which could lead to damage to the adjacent building.

---

**Provision: 3.1.6.3.(3)**

---

**Intent(s)**

*Intent 1.* To exempt such structures from the spatial separation requirements of Sentence 3.1.6.3.(1) and Clause 3.1.6.3.(2)(a) if such structures are unoccupied and do not pose a hazard to persons in nearby structures.

---

**Provision: 3.1.6.3.(4)**

---

**Intent(s)**

*Intent 1.* To exempt tents from the spatial separation requirements of Sentence 3.1.6.3.(1) and Clause 3.1.6.3.(2)(a) if such tents are limited in size, restricted to certain locations and do not pose a hazard to persons nearby.

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability of ignition of combustible materials and vegetation, which could lead to the spread of fire, which could lead to harm to persons.

*Intent 2.* To limit the probability that a fire on the ground will spread to the tent or air-supported structure, which could lead to harm to persons inside the structure.

---

### **Objective**

OP1

### **Attributions**

[F01-OP1.1] [F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability of ignition of combustible materials and vegetation, which could lead to the spread of fire, which could lead to damage to the building or facility.

*Intent 2.* To limit the probability that a fire on the ground will spread to the tent or air-supported structure, which could lead to damage to the building or facility.

---

## **Provision: 3.1.6.5.(1)**

---

### **Objective**

OS1

### **Attributions**

[F02-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fabric and material used for such structures will significantly contribute to fire growth and spread, which could lead to harm to persons.

---

## **Provision: 3.1.6.6.(1)**

---

### **Objective**

OS3

### **Attributions**

[F20-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that interruption of electrical power to the blowers will collapse the structure before the time required for evacuation in an emergency, which could lead to harm to persons.

---

## **Provision: 3.1.6.7.(1)**

---

### **Objective**

OP1

### **Attributions**

[F34-OP1.1]

### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that unauthorized persons will have access to electrical systems and equipment, which could lead to improper use or operation of the systems or equipment, which could lead to a fire or explosion, which could lead to damage to the building.

---

### **Objective**

OS3

### **Attributions**

[F34-OS3.3]

### **Intent(s)**

*Intent 1.* To limit the probability that unauthorized persons will have access to electrical systems and equipment, which could lead to contact with live electrical equipment, which could lead to harm to persons.

---

### **Objective**

OS1

### **Attributions**

[F34-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that unauthorized persons will have access to electrical systems and equipment, which could lead to improper use or operation of the systems or equipment, which could lead to a fire or explosion, which could lead to harm to persons.

---

### **Provision: 3.1.6.7.(2)**

---

### **Objective**

OP1

### **Attributions**

[F81-OP1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that electrical cables will be damaged, which could lead to unsafe conditions, which could lead to a fire or explosion, which could lead to damage to the building.

---

### **Objective**

OS1

### **Attributions**

[F81-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that electrical cables will be damaged, which could lead to unsafe conditions, which could lead to a fire or explosion, which could lead to harm to persons.

---

### **Provision: 3.1.7.1.(1)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2] [F04-OS1.3]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that materials, assemblies or structural members will have insufficient resistance to the spread of fire, which could lead to harm to persons.

*Intent 2.* To limit the probability that materials, assemblies or structural members will have insufficient resistance to fire, which could lead to their failure or collapse, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2] [F04-OP1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that materials, assemblies or structural members will have insufficient resistance to the spread of fire, which could lead to damage to the building.

*Intent 2.* To limit the probability that materials, assemblies or structural members will have insufficient resistance to fire, which could lead to their failure or collapse, which could lead to damage to the building.

---

### **Provision: 3.1.7.1.(2)**

### **Intent(s)**

*Intent 1.* To exempt such materials and structural members from the application of Sentence 3.1.7.1.(1) on the basis that the ratings assigned in Appendix Appendix D Division A are considered equivalent to the ratings assigned by the test method stated in Sentence 3.1.7.1.(1).

---

### **Provision: 3.1.7.2.(1)**

### **Intent(s)**

*Intent 1.* To exempt exterior walls from the application of Sentence 3.1.7.1.(1) if certain conditions are met to limit the probability of the spread of fire from one building to another.

*Intent 2.* To direct Code users to Sentence 3.2.3.1.(9).

---

### **Provision: 3.1.7.3.(1)**

### **Intent(s)**

*Intent 1.* To clarify that the fire-resistance rating of certain floor, roof and ceiling assemblies is determined by exposing the underside of the assemblies to fire.

---

### **Provision: 3.1.7.3.(2)**

### **Intent(s)**

*Intent 1.* To clarify that the fire-resistance rating of certain wall assemblies is determined by exposing both sides of the assembly to fire.

---

### **Provision: 3.1.7.3.(3)**

---

**Intent(s)**

*Intent 1.* To clarify that the fire-resistance rating for exterior wall assemblies is determined by exposure to fire from inside the building.

**Provision: 3.1.7.4.(1)**

---

**Intent(s)**

*Intent 1.* To clarify that the use of materials or assemblies that exceed Code requirements with respect to fire-resistance ratings does not impose any obligation to use such materials or assemblies.

**Provision: 3.1.7.5.(1)**

---

**Objective**

OS1

**Attributions**

[F04-OS1.3]

**Intent(s)**

*Intent 1.* To limit the probability that such structures will have insufficient resistance to fire, which could lead to the collapse of the structures and their supported assemblies, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F04-OP1.3]

**Intent(s)**

*Intent 1.* To limit the probability that such structures will have insufficient resistance to fire, which could lead to the collapse of the structures and their supported assemblies, which could lead to damage to the building.

**Provision: 3.1.7.5.(2)**

---

**Intent(s)**

*Intent 1.* To exempt structures supporting certain rooms or spaces from the application of Sentence 3.1.7.5.(1) on the basis that the collapse of such rooms and spaces, which are not normally occupied, does not pose a hazard to persons.

**Provision: 3.1.7.5.(3)**

---

**Objective**

OS1

**Attributions**

[F04-OS1.3]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that supporting structures will be burnt away in a fire, which could lead to insufficient resistance to fire, which could lead to the collapse of the structures and their supported assemblies, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F04-OP1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that supporting structures will be burnt away in a fire, which could lead to insufficient resistance to fire, which could lead to the collapse of the structures and their supported assemblies, which could lead to damage to the building.

---

## **Provision: 3.1.8.1.(1)**

---

### **Objective**

OS1

### **Attributions**

3.1.8.1.(1)(a) [F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire separations will have insufficient resistance to the spread of fire through the assemblies and where the fire separations abut other assemblies, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

3.1.8.1.(1)(a) [F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire separations will have insufficient resistance to the spread of fire through the assemblies and where the fire separations abut other assemblies, which could lead to damage to the building.

---

### **Attributions**

3.1.8.1.(1)(b)

### **Intent(s)**

*Intent 1.* To direct Code users to other provisions within Part 3 to determine requirements for fire-resistance ratings of certain assemblies required to be fire separations.

**Provision: 3.1.8.1.(2)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2] Applies to the requirement that openings in *fire separations* be protected with *closures*, shafts or other means.

**Intent(s)**

*Intent 1.* To exempt openings in fire separations from the application of Clause 3.1.8.1.(1)(a) if certain conditions are met to limit the probability that fire will spread through openings in a fire separation, which could lead to harm to persons in the area on the other side of the fire separation.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2] Applies to the requirement that openings in *fire separations* be protected with *closures*, shafts or other means.

**Intent(s)**

*Intent 1.* To exempt openings in fire separations from the application of Clause 3.1.8.1.(1)(a) if certain conditions are met to limit the probability that fire will spread through openings in a fire separation, which could lead to damage to the building on the other side of the fire separation.

---

**Intent(s)**

*Intent 1.* To direct Code users to Articles 3.1.8.4. to 3.1.8.17. and Subsections 3.1.9. and 3.2.8., which apply to the protection of openings in fire separations.

**Provision: 3.1.8.2.(1)**

---

**Objective**

OS1

**Attributions**

[F04-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that the collapse of the combustible construction under fire conditions will lead to the collapse of the fire separation, which could lead to the spread of fire, which could lead to harm to persons on the other side of the fire separation.

---

**Objective**

OP1

**Attributions**

[F04-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that the collapse of the combustible construction under fire conditions will lead to the collapse of the fire separation, which could lead to the spread of fire, which could lead to damage to the building on the other side of the fire separation.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.1.8.3.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to another fire compartment through concealed spaces located above a vertical fire separation, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to another fire compartment through concealed spaces located above a vertical fire separation, which could lead to damage to the building.

### **Provision: 3.1.8.3.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke will spread from one fire compartment to another fire compartment through gaps where the fire separation abuts other assemblies, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke will spread from one fire compartment to another fire compartment through gaps where the fire separation abuts other assemblies, which could lead to damage to the building.

**Provision: 3.1.8.3.(3)**

---

**Objective**

OS1

**Attributions**

3.1.8.3.(3)(a) [F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to another fire compartment through a shaft, which could lead to harm to persons in the other fire compartment.

---

**Objective**

OP1

**Attributions**

3.1.8.3.(3)(a) [F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to another fire compartment through a shaft, which could lead to damage to the building in the other fire compartment.

---

**Objective**

OS1

**Attributions**

3.1.8.3.(3)(b) [F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that smoke will spread from one fire compartment to another fire compartment through gaps where the shaft abuts certain assemblies, which could lead to harm to persons in the other fire compartment.

---

**Objective**

OP1

**Attributions**

3.1.8.3.(3)(b) [F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that smoke will spread from one fire compartment to another fire compartment through gaps where the shaft abuts certain assemblies, which could lead to damage to the building in the other fire compartment.

**Provision: 3.1.8.3.(4)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to another fire compartment through gaps where the fire separation abuts other assemblies, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to another fire compartment through gaps where the fire separation abuts other assemblies, which could lead to damage to the building or facility.

---

### **Provision: 3.1.8.4.(1)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that closures will have insufficient resistance to the spread of fire, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that closures will have insufficient resistance to the spread of fire, which could lead to damage to the building.

---

### **Provision: 3.1.8.4.(2)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread through openings in a fire separation, which could lead to harm to persons in the area on the other side of the fire separation.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread through openings in a fire separation, which could lead to damage to the building on the other side of the fire separation.

**Provision:** 3.1.8.5.(1)

---

**Intent(s)**

*Intent 1.* To clarify how the fire-protection rating for certain closures is determined.

**Provision:** 3.1.8.5.(2)

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability of improper installation of closures, which could lead to the spread of fire from one fire compartment to another fire compartment, which could lead to harm to persons in the other fire compartment.

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability of improper installation of closures, which could lead to the spread of fire from one fire compartment to another fire compartment, which could lead to damage to the building in the other fire compartment.

**Provision:** 3.1.8.5.(3)

---

**Objective**

OS1

**Attributions**

[F81-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that an unrestricted door swing will lead to damage to a fire separation, which could lead to the spread of fire from one fire compartment to another fire compartment, which could lead to harm to persons in the other fire compartment.

**Objective**

OP1

**Attributions**

[F81-OP1.2]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that an unrestricted door swing will lead to damage to a fire separation, which could lead to the spread of fire from one fire compartment to another fire compartment, which could lead to damage to the building in the other fire compartment.

---

### **Provision: 3.1.8.5.(4)**

#### **Objective**

OP1

#### **Attributions**

[F81-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that mechanical components of doors [e.g. closures] will be damaged, which could lead to their improper operation in a fire situation, which could lead to the spread of fire from one side of a fire separation to the other side of the separation, which could lead to damage to the building.

*Intent 2.* To limit the probability that protective guarding devices will interfere with the proper operation of doors in a fire situation, which could lead to the spread of fire from one side of a fire separation to the other side of the separation, which could lead to damage to the building.

---

#### **Objective**

OS1

#### **Attributions**

[F81-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that mechanical components of doors [e.g. closures] will be damaged, which could lead to their improper operation in a fire situation, which could lead to the spread of fire from one side of a fire separation to the other side of the separation, which could lead to harm to persons on the other side of the separation.

*Intent 2.* To limit the probability that protective guarding devices will interfere with the proper operation of doors in a fire situation, which could lead to the spread of fire from one side of a fire separation to the other side of the separation, which could lead to harm to persons on the other side of the separation.

---

### **Provision: 3.1.8.6.(1)**

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that large closures--which are permitted to have a lower resistance to fire than do the fire separations--will reduce the fire-resistance rating of the fire separations, which could lead to the spread of fire from one fire compartment to another fire compartment, which could lead to harm to persons in the other fire compartment.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that large closures--which are permitted to have a lower resistance to fire than do the fire separations--will reduce the fire-resistance rating of the fire separations, which could lead to the spread of fire from one fire compartment to another fire compartment, which could lead to damage to the building in the other fire compartment.

**Provision: 3.1.8.6.(2)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that large closures--which are permitted to have a lower resistance to fire than do the fire separations--will reduce the fire-resistance rating of the fire separations, which could lead to the spread of fire from one fire compartment to another fire compartment, which could lead to harm to persons in the other fire compartment.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that large closures--which are permitted to have a lower resistance to fire than do the fire separations--will reduce the fire-resistance rating of the fire separations, which could lead to the spread of fire from one fire compartment to another fire compartment, which could lead to damage to the building in the other fire compartment.

**Provision: 3.1.8.7.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to another fire compartment through openings in a fire separation, which could lead to harm to persons in the other fire compartment.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to another fire compartment through openings in a fire separation, which could lead to damage to the portion of the building in the other fire compartment.

---

### **Provision: 3.1.8.7.(2)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to Sentence 3.1.8.4.(2) for the determination of fire-protection ratings.

---

### **Provision: 3.1.8.8.(1)**

---

### **Intent(s)**

*Intent 1.* To exempt certain branch ducts from the application of Sentence 3.1.8.7.(1), which would otherwise require fire dampers, on the basis that the lack of fire dampers in this case will not lead to significant spread of fire.

*Intent 2.* To direct Code users to Article 3.6.3.4. for exhaust duct risers referred to in Clause 3.1.8.8.(1)(b).

---

### **Provision: 3.1.8.8.(2)**

---

### **Intent(s)**

*Intent 1.* To exempt certain ducts from the application of Sentence 3.1.8.7.(1), which would otherwise require fire dampers, on the basis that the installation of fire dampers in this case would lead to a higher level of fire-resistance at the fire damper location than that provided by the fire separation.

---

### **Provision: 3.1.8.8.(3)**

---

### **Intent(s)**

*Intent 1.* To exempt certain ducts from the application of Sentence 3.1.8.7.(1), which would otherwise require fire dampers, on the basis that the installation of fire dampers in this case would lead to a higher level of fire-resistance at the fire damper location than that provided by the fire separation.

---

### **Provision: 3.1.8.8.(4)**

---

### **Intent(s)**

*Intent 1.* To exempt certain ducts from the application of Sentence 3.1.8.7.(1), which would otherwise require fire dampers, on the basis that the lack of fire dampers in this case will not lead to significant spread of fire.

**Provision: 3.1.8.8.(5)**

---

**Intent(s)**

*Intent 1.* To exempt certain ducts from the application of Sentence 3.1.8.7.(1), which would otherwise require fire dampers, on the basis that the lack of fire dampers in this case will not lead to significant spread of fire.

**Provision: 3.1.8.8.(6)**

---

**Intent(s)**

*Intent 1.* To exempt certain ducts from the application of Sentence 3.1.8.7.(1), which would otherwise require fire dampers, on the basis that:

- the lack of fire dampers in this case will not lead to significant spread of fire,
- accidental closing of the fire dampers by the cooking operations would lead to an undue hardship to the operations, and
- the fire dampers and their operating parts could collect grease, be very difficult to clean, and add to the fire hazard.

**Provision: 3.1.8.9.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire damper will not close when activated by fire conditions, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to harm to persons in the other fire compartment.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire damper will not close when activated by fire conditions, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to damage to the building in the other fire compartment.

**Provision: 3.1.8.9.(2)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability of delayed closure of the fire damper under fire conditions, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to harm to persons in the other fire compartment.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability of delayed closure of the fire damper under fire conditions, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to damage to the building in the other fire compartment.

---

### **Provision: 3.1.8.9.(3)**

---

### **Objective**

OS1

### **Attributions**

[F04-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that the dislodging of the fire damper will interfere with the operation of the fire damper or its ability to protect the opening in the fire separation, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to harm to persons in the other fire compartment.

---

### **Objective**

OP1

### **Attributions**

[F04-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that the dislodging of the fire damper will interfere with the operation of the fire damper or its ability to protect the opening in the fire separation, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to damage to the building in the other fire compartment.

---

### **Provision: 3.1.8.9.(4)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

**Intent 1.** To limit the probability that a fire damper will not close when activated by fire conditions, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to harm to persons in the other fire compartment.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

**Intent 1.** To limit the probability that a fire damper will not close when activated by fire conditions, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to damage to the building in the other fire compartment.

---

**Provision: 3.1.8.9.(5)**

---

**Objective**

OS1

**Attributions**

[F82-OS1.2] Applies to portion of Code text: "A tightly fitted access door shall be installed for each *fire damper* to provide access for the inspection of the damper ..."

**Intent(s)**

**Intent 1.** To limit the probability that fire dampers will not be properly maintained, which could lead to their failure to close in fire conditions, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to harm to persons in the other fire compartment.

---

**Objective**

OP1

**Attributions**

[F82-OP1.2] Applies to portion of Code text: "A tightly fitted access door shall be installed for each *fire damper* to provide access for the inspection of the damper ..."

**Intent(s)**

**Intent 1.** To limit the probability that fire dampers will not be properly maintained, which could lead to their failure to close in fire conditions, which could lead to the spread of fire from one fire compartment to another fire compartment through openings in the fire separation between the fire compartments, which could lead to damage to the building in the other fire compartment.

---

**Objective**

OH1

**Attributions**

[F82-OH1.2] Applies to portion of Code text: "A tightly fitted access door shall be installed for each *fire damper* to provide access for ... the resetting of the release device."

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that a fire damper will not be reset after a fire, which could lead to improper operation of the air handling system, which could lead to discomfort to persons, which could lead to harm to persons.

**Provision: 3.1.8.10.(1)**

---

**Intent(s)**

*Intent 1.* To exempt certain door assemblies from the application of Sentence 3.1.8.4.(2) if certain conditions are met, on the basis that the door assemblies are deemed to provide sufficient protection against the spread of fire.

**Provision: 3.1.8.10.(2)**

---

**Intent(s)**

*Intent 1.* Exempt certain sills and floor coverings from the application of NFPA 80 referred to in Sentence 3.1.8.4.(2) on the basis that the sills and coverings are deemed to insignificantly contribute to the spread of fire.

**Provision: 3.1.8.10.(3)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To override the clearances in NFPA 80 referred to in Sentence 3.1.8.5.(2). This is to limit the probability that fire will spread through gaps between a door and a door frame, which could lead to harm to persons on the other side of the fire compartment.

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To override the clearances in NFPA 80 referred to in Sentence 3.1.8.5.(2). This is to limit the probability that fire will spread through gaps between a door and a door frame, which could lead to damage to the building on the other side of the fire compartment.

**Provision: 3.1.8.11.(1)**

---

**Objective**

OS1

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that penetrations of a fire separation will not be sealed, which could lead to a failure of the integrity of the fire separations, which could lead to the spread of fire and smoke from one fire compartment to another fire compartment, which could lead to harm to persons in the other fire compartment.

*Intent 2.* To exempt penetrations of a fire separation from the application of Sentence 3.1.9.1.(1), on the basis that a higher level of performance with respect to sealing is required for these fire separations.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that penetrations of a fire separation will not be sealed, which could lead to a failure of the integrity of the fire separations, which could lead to the spread of fire and smoke from one fire compartment to another fire compartment, which could lead to damage to the building.

*Intent 2.* To exempt penetrations of a fire separation from the application of Sentence 3.1.9.1.(1), on the basis that a higher level of performance with respect to sealing is required for these fire separations.

### **Provision: 3.1.9.1.(4)**

---

#### **Intent(s)**

*Intent 1.* To exempt penetrations made by sprinklers through rated assemblies from the requirements of Sentence (1), which would otherwise require the penetration to be sealed by a fire stop, if certain conditions are met, on the basis that the application of the fire stop material may render the sprinklers ineffective.

### **Provision: 3.1.9.1.(5)**

---

#### **Intent(s)**

*Intent 1.* To exempt penetrations made by fire dampers through rated assemblies from the requirements of Sentence (1), which would otherwise require the penetration to be sealed by a fire stop, if certain conditions are met, on the basis that the application of the fire stop material may render the dampers ineffective.

**Provision: 3.1.9.2.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2] [F02, F04-OS1.3] Applies to portion of Code text: "Except as permitted by Articles 3.1.9.3. and 3.1.9.4., pipes, ducts, electrical outlet boxes, totally enclosed raceways or other similar service equipment that penetrate an assembly required to have a *fire-resistance rating* shall be *noncombustible* ..."

**Intent(s)**

*Intent 1.* To limit the probability that certain service equipment that penetrates fire-rated assemblies will contribute to the growth and spread of fire within the assemblies, which could lead to a structural failure and collapse of the assemblies, which could lead to harm to persons.

*Intent 2.* To limit the probability that certain service equipment that penetrates fire-rated assemblies--which also form a fire separation--will contribute to the growth and spread of fire within or through the assemblies, which could lead to a loss of integrity of the fire separation, which could lead to the spread of fire and smoke from one fire compartment to another fire compartment, which could lead to harm to persons in the other fire compartment.

---

**Intent(s)**

*Intent 1.* To exempt service equipment from the requirement to be noncombustible if certain testing has been conducted on the assemblies with the equipment installed, on the basis that the testing demonstrates that combustible service equipment will not reduce the structural integrity of the assembly in a fire condition.

---

**Objective**

### **Intent(s)**

*Intent 1.* To exclude structural members supported on two separate wall assemblies from the requirements of Sentence 3.1.10.1.(1) on the basis that, in the event that one wall collapses, the other wall will not collapse and will provide at least one half of the required fire-resistance rating otherwise required for a firewall.

*Intent 2.* To limit the probability that fire will spread from the building to an adjacent building, which could lead to damage to the adjacent building.

---

## **Provision: 3.1.10.1.(3)**

---

### **Intent(s)**

*Intent 1.* To clarify that the continuity of firewalls referred to in Sentence 3.1.10.3.(1) can include structural frame support if certain conditions are met. This is to limit the probability of the structural integrity of the firewall being compromised in fire conditions.

---

## **Provision: 3.1.10.1.(4)**

---

### **Objective**

OS1

### **Attributions**

[F04-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that the collapse of building service components associated with a firewall will lead to the collapse of the firewall, which could lead to the spread of fire, which could lead to harm to persons on the other side of the firewall.

---

**Objective**

OP1

**Attributions**

[F04-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that the collapse of building service components associated with a firewall will lead to the collapse of the firewall, which could lead to the spread of fire from an adjacent building to the building, which could lead to damage to the building.

---

**Objective**

OP3

**Attributions**

[F04-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that the collapse of building service components associated with a firewall will lead to the collapse of the firewall, which could lead to the spread of fire from the building to an adjacent building, which could lead to damage to the adjacent building.

---

**Provision: 3.1.10.2.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2] Applies to portion of Code text: *“A firewall that separates a building or buildings with floor areas containing a Group E or a Group F, Division 1 or 2 major occupancy shall be constructed as a fire separation of noncombustible construction having a fire-resistance rating not less than 4 h ...”*

**Intent(s)**

*Intent 1.* To limit the probability that a firewall will have insufficient fire-resistance, which could lead to the spread of fire from one building to another, which could lead to harm to persons in the building not originally involved in the fire.

*Intent 2.* To limit the probability that fire will spread from one building to another during the time needed for emergency responders to carry out their duties, which could lead to harm to persons in the building not originally involved in the fire.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2] Applies to portion of Code text: *“A firewall that separates a building or buildings with floor areas containing a Group E or a Group F, Division 1 or 2 major occupancy shall be constructed as a fire separation of noncombustible construction having a fire-resistance rating not less than 4 h ...”*

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that a firewall will have insufficient fire-resistance, which could lead to the spread of fire from an adjacent building to the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread from an adjacent building to the subject building during the time needed for emergency responders to carry out their duties, which could lead to damage to the building.

---

### **Intent(s)**

*Intent 1.* To exempt certain upper portions of firewalls from the requirement to have a higher fire-resistance rating, on the basis that these upper portions of firewalls have the necessary fire-resistance rating for maintaining an appropriate level of safety.

---

### **Objective**

OP3

### **Attributions**

[F03-OP3.1] Applies to portion of Code text: “A *firewall* that separates a *building* or *buildings* with *floor areas* containing a Group E or a Group F, Division 1 or 2 *major occupancy* shall be constructed as a *fire separation* of *noncombustible construction* having a *fire-resistance rating* not less than 4 h ...”

### **Intent(s)**

*Intent 1.* To limit the probability that a firewall will have insufficient fire-resistance, which could lead to the spread of fire from the building to an adjacent building, which could lead to damage to the adjacent building.

*Intent 2.* To limit the probability that fire will spread from the subject building to an adjacent building during the time needed for emergency responders to carry out their duties, which could lead to damage to the adjacent building.

---

**Provision: 3.1.10.3.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2] Applies to portion of Code text: "A *firewall* shall extend from the ground continuously through, or adjacent to, all *storeys* of a *building* or *buildings* so separated ..."

**Intent(s)**

*Intent 1.* To limit the probability of a firewall not being continuous, which could lead to gaps or openings in the firewall during a fire, which could lead to the spread of fire from one building to another, which could lead to harm to persons in the building not originally involved in the fire.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2] Applies to portion of Code text: "A *firewall* shall extend from the ground continuously through, or adjacent to, all *storeys* of a *building* or *buildings* so separated ..."

**Intent(s)**

*Intent 1.* To limit the probability of a firewall not being continuous, which could lead to gaps or openings in the firewall during a fire, which could lead to the spread of fire from an adjacent building to the building, which could lead to damage to the building.

---

**Intent(s)**

*Intent 1.* To exempt certain firewalls from the requirement to be continuous if certain conditions are met that provide an equivalent level of protection. This is to limit the probability that fire will spread from one side of the firewall to the other.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP3

### **Attributions**

[F03-OP3.1] Applies to portion of Code text: “A *firewall* shall extend from the ground continuously through, or adjacent to, all *storeys* of a *building* or *buildings* so separated ...”

### **Intent(s)**

*Intent 1.* To limit the probability of a firewall not being continuous, which could lead to gaps or openings in the firewall during a fire, which could lead to the spread of fire from the building to an adjacent building, which could lead to damage to the adjacent building.

---

### **Provision: 3.1.10.3.(2)**

### **Intent(s)**

*Intent 1.* To exempt certain firewalls from the application of Sentence 3.1.10.4.(1), which would otherwise require the firewall to extend beyond the upper roof surface to form a parapet, if certain conditions are met that provide an equivalent level of protection. This is to limit the probability that fire will spread from one side of the firewall to the other.

---

### **Provision: 3.1.10.4.(1)**

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that a firewall will not extend sufficiently above a roof surface, which could lead to the spread of fire from the roof of an adjacent building to the roof of the building, which could lead to damage to the building.

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that a firewall will not extend sufficiently above a roof surface, which could lead to the spread of fire from the roof of one building to the roof of another building, which could lead to harm to persons in the building not originally involved in the fire.

---

### **Objective**

OP3

### **Attributions**

[F03-OP3.1]

### **Intent(s)**

**Intent 1.** To limit the probability that a firewall will not extend sufficiently above a roof surface, which could lead to the spread of fire from the roof of the building to the roof of the adjacent building, which could lead to damage to the adjacent building.

---

**Provision: 3.1.10.4.(2)**

---

**Intent(s)**

**Intent 1.** To exempt certain firewalls from the application of Sentence 3.1.10.4.(1), which would otherwise require the firewall to extend beyond the upper roof surface to form a parapet, if certain conditions are met that provide an equivalent level of protection. This is to limit the probability that fire will spread from one building to another.

---

**Provision: 3.1.10.5.(1)**

---

**Intent(s)**

**Intent 1.** To direct Code users to Article 3.1.8.6. for size limitations of openings through firewalls, which are a special type of fire separation.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2] Applies to portion of Code text: "... the aggregate width of openings shall be not more than 25% of the entire length of the *firewall*."

**Intent(s)**

**Intent 1.** To limit the probability of a large number of openings in a firewall, which could lead to the failure of the protective closures for these openings during a fire, which could lead to the spread of fire from an adjacent building to the building, which could lead to damage to the building.

**Intent 2.** To limit the probability of a large number of openings in a firewall, which could lead to the failure of the integrity of the firewall, which could lead to the spread of fire from an adjacent building to the building, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

[F03-OS1.2] Applies to portion of Code text: "... the aggregate width of openings shall be not more than 25% of the entire length of the *firewall*."

**Intent(s)**

**Intent 1.** To limit the probability of a large number of openings in a firewall, which could lead to the failure of the protective closures for these openings during a fire, which could lead to the spread of fire from one building to another, which could lead to harm to persons in the building not originally involved in the fire.

**Intent 2.** To limit the probability of a large number of openings in a firewall, which could lead to the failure of the integrity of the firewall, which could lead to the spread of fire from one building to another, which could lead to harm to persons in the building not originally involved in the fire.

---

## **Intent Statements: NBC 2010**

[F03, F04-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that certain spaces will not be separated from certain other parts of the building, which could lead to the spread of fire within these spaces, which could lead to harm to persons.

*Intent 2.* To limit the probability that fire stopping material used to block and separate certain spaces will not remain in place for a certain minimum time when subjected to fire conditions, which could lead to the spread of fire within these spaces, which could lead to harm to persons.

*Intent 3.* To state the application of Article 3.1.11.7.

---

### **Intent(s)**

*Intent 1.* To limit the probability that inappropriate criteria will be stated for the testing of materials or assemblies with respect to spread of flame, which could lead to the use of inappropriate materials or assemblies, which could lead to the materials or assemblies contributing to the spread of fire, which could lead to damage to the building.

*Intent 2.* To limit the probability that inappropriate criteria will be stated for the testing of materials or assemblies with respect to smoke generation, which could lead to the use of inappropriate materials or assemblies, which could lead to the generation of an inappropriate amount of smoke from the materials or assemblies when subjected to fire conditions, which could lead to damage to the building.

---

### **Provision: 3.1.12.1.(3)**

### **Intent(s)**

*Intent 1.* To exempt materials, assemblies or structural members from the application of Sentences 3.1.12.1.(1) and 3.1.12.1.(2), which would otherwise require certain testing, if certain other test methods are met, on the basis that the other test methods provide an equivalent means of testing for flame spread and smoke development.

---

### **Provision: 3.1.13.1.(1)**

### **Intent(s)**

*Intent 1.* To direct Code users to the NFC for requirements regarding interior finishes, furnishings and decorative materials.

---

### **Provision: 3.1.13.1.(2)**

### **Intent(s)**

*Intent 1.* To describe which materials are to be included in the category of interior finish for the purpose of applying this Code.

---

**Provision: 3.1.13.2.(1)**

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that certain finishes having an inappropriately high flame-spread property will be used, which could lead to the spread of fire across the exposed surfaces of the finishes, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that certain finishes having an inappropriately high flame-spread property will be used in certain building locations, which could lead to the spread of fire across the exposed surfaces of the finishes, which could lead to damage to the building.

---

**Provision: 3.1.13.2.(2)**

**Intent(s)**

*Intent 1.* To exempt certain doors from the application of Sentence 3.1.13.2.(1) and allow a higher maximum flame-spread rating on the basis that the higher rating will not significantly contribute to the spread of flame across the door surface.

---

**Provision: 3.1.13.2.(3)**

**Intent(s)**

*Intent 1.* To exempt doors in dwelling units from the application of Sentences 3.1.13.2.(1) and 3.1.13.2.(2), which would otherwise require a certain maximum flame-spread rating, on the basis that the doors will not significantly contribute to the spread of flame.

---

**Provision: 3.1.13.2.(4)**

**Intent(s)**

*Intent 1.* To exempt portions of wall and ceiling finishes from the application of Sentence 3.1.13.2.(1) and allow a higher maximum flame-spread rating, on the basis that these surface portions will not significantly contribute to the spread of flame.

---

**Provision: 3.1.13.2.(5)**

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt combustible doors, skylights, glazing and light diffusers and lenses from the application of Sentence 3.1.13.2.(4), on the basis that these building elements will not significantly contribute to the spread of flame.

### **Provision: 3.1.13.3.(1)**

---

#### **Intent(s)**

*Intent 1.* To exempt certain finishes from the application of Sentence 3.1.13.2.(1) and allow a higher maximum flame-spread rating, on the basis that these building elements will not significantly contribute to the spread of flame, so that the finishes can meet the plumbing fixture criteria of CSA standards.

### **Provision: 3.1.13.4.(1)**

---

#### **Intent(s)**

*Intent 1.* To exempt light diffusers and lenses from the application of Sentence 3.1.5.1.(1), which would otherwise require the diffusers and lenses to be of noncombustible construction, and Sentences 3.1.13.2.(1) and 3.1.13.6.(5), which would otherwise require a lower maximum flame-spread rating, if certain conditions are met, on the basis that these building elements will not significantly contribute to the spread of flame.

### **Provision: 3.1.13.5.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that combustible skylights will be inappropriately large and spaced closely together, which could lead to an inappropriate amount of combustible material located in close proximity, which could contribute significantly to the growth and spread of fire, which could lead to impeded evacuation of persons using the corridor, which could lead to harm to persons.

### **Provision: 3.1.13.6.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that interior wall finishes that have an inappropriately high flame spread property will be used in certain building locations, which could lead to the spread of fire across the exposed surfaces of the finishes, which could lead to harm to persons.

*Intent 2.* To exempt interior wall finishes used in certain locations from the application of Sentence 3.1.13.2.(1), which would otherwise allow a higher maximum flame-spread rating, on the basis that a lower flame-spread rating is needed in these locations to protect persons during evacuation.

**Provision: 3.1.13.6.(2)**

---

**Intent(s)**

*Intent 1.* To exempt interior wall finishes in corridors from the application of Sentences 3.1.13.2.(1) and 3.1.13.6.(1), which would otherwise require certain maximum flame-spread ratings, if certain conditions are met, on the basis that these finishes will not significantly contribute to the spread of flame.

**Provision: 3.1.13.6.(3)**

---

**Intent(s)**

*Intent 1.* To exempt interior wall finishes in corridors from the application of Sentences 3.1.13.2.(1), 3.1.13.6.(1) and 3.1.13.6.(2), which would otherwise require certain maximum flame-spread ratings, if certain conditions are met, on the basis that these finishes will not significantly contribute to the spread of flame, and the condition imposed [sprinklering] will control the growth and spread of fire.

**Provision: 3.1.13.6.(4)**

---

**Intent(s)**

*Intent 1.* To expand the application of the flame-spread rating limits specified in Sentences 3.1.13.6.(1), 3.1.13.6.(2) and 3.1.13.6.(3) so that they will apply to occupancies in the corridor as well as to the corridor itself.

**Provision: 3.1.13.6.(5)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that interior ceiling finishes that have an inappropriately high flame-spread property will be used in certain building locations, which could lead to the spread of fire across the exposed surfaces of the finishes, which could lead to harm to persons.

*Intent 2.* To exempt interior ceiling finishes used in certain locations from the application of Sentence 3.1.13.2.(1), which would otherwise permit higher flame-spread ratings, on the basis that a lower flame-spread rating is needed in these locations to protect persons during evacuation.

**Provision: 3.1.13.7.(1)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that interior finishes that have inappropriately high flame-spread and smoke-development properties will be used in high buildings, which could lead to the development of an inappropriate amount of smoke and the spread of fire across the exposed surfaces of the finishes, which could lead to harm to persons.

---

### **Intent(s)**

*Intent 1.* To expand the requirements of Article 3.1.13.2. to apply to finishes in a high building.

---

### **Objective**

OP1

### **Attributions**

[F02-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that interior finishes that have inappropriately high flame-spread and smoke development properties will be used in high buildings, which could lead to the development of an inappropriate amount of smoke and the spread of fire across the exposed surfaces of the finishes, which could lead to damage to the building.

---

### **Provision: 3.1.13.7.(2)**

### **Intent(s)**

*Intent 1.* To exempt interior finishes used in high buildings from the application of Table 3.1.13.7., which would otherwise limit flame-spread ratings and smoke development classifications, if a certain condition is met, on the basis that the condition [sprinklering] will control smoke development and flame spread to acceptable levels.

---

### **Provision: 3.1.13.7.(3)**

### **Intent(s)**

*Intent 1.* To exempt trim and millwork used in certain locations in high buildings from the application of Sentence 3.1.13.7.(1) and Article 3.1.13.2., which would otherwise require lower flame-spread ratings and smoke development classifications, if certain conditions are met, on the basis that these materials will not significantly contribute to smoke development or flame spread.

---

### **Provision: 3.1.13.7.(4)**

### **Intent(s)**

*Intent 1.* To exempt doors in certain locations in high buildings from the application of Sentence 3.1.13.7.(1) and Article 3.1.13.2., which would otherwise require lower flame-spread ratings and smoke development classifications, if certain conditions are met, on the basis that these doors will not significantly contribute to smoke development or flame spread.

---

### **Provision: 3.1.13.8.(1)**

### **Intent(s)**

*Intent 1.* To clarify that the provisions of Subsection 3.1.5. related to flame-spread ratings apply to buildings required to be of noncombustible construction.

*Intent 2.* To clarify that the flame-spread ratings for exits in Subsection 3.1.13. also apply to any surface in the exit that would be exposed by cutting through the material in any direction.

---

**Provision: 3.1.13.9.(1)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that combustible wall and ceiling finishes will be used in an underground walkway, which could lead to fire growth and the spread of fire, which could lead to harm to persons.

*Intent 2.* To exempt interior wall finishes in underground walkways from the application of Sentence 3.1.13.2.(1), which would otherwise allow finishes with flame-spread ratings up to 150, on the basis that noncombustible finish materials are needed in these locations to protect persons during evacuation.

---

**Objective**

OP3

**Attributions**

[F02-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that combustible wall and ceiling finishes will be used in an underground walkway, which could lead to fire growth and the spread of fire to an adjacent [connected] building, which could lead to damage to the adjacent building.

*Intent 2.* To exempt interior wall finishes in underground walkways from the application of Sentence 3.1.13.2.(1).

---

**Provision: 3.1.13.10.(1)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that wall and ceiling finishes that have inappropriately high flame-spread ratings will be used in certain passageways that provide means of egress, which could lead to the spread of fire across the exposed surfaces of the finishes, which could lead to a delay in evacuation, which could lead to harm to persons.

*Intent 2.* To exempt interior wall finishes in exterior exit passageways [that provide the only means of egress from the rooms or suites they serve] from the application of Sentence 3.1.13.2.(1).

---

## **Intent Statements: NBC 2010**

[F02-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that inappropriate test criteria will be used for the testing of certain roof deck assemblies, which could lead to the spread of fire under the assembly, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.1.14.2.(2)**

---

#### **Intent(s)**

*Intent 1.* To exempt metal roof deck assemblies from the application of Sentence 3.1.14.2.(1), which would otherwise require the assemblies to be fire tested, if certain conditions are met, on the basis that the assemblies will not significantly contribute to the spread of fire.

### **Provision: 3.1.15.1.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that an inappropriate method of determining roof covering classifications will be used, which could lead to the use of inappropriate roof coverings, which could lead to fire growth and the spread of fire across the roof coverings, which could lead to the spread of fire to occupied parts of the building, which could lead to harm to persons in the building.

*Intent 2.* To limit the probability that an inappropriate method of determining a roof covering classification will be used, which could lead to the use of an inappropriate roof covering, which could lead to fire growth and the spread of fire across the roof covering, which could lead to the spread of fire to an adjacent building, which could lead to harm to persons in the adjacent building.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that an inappropriate method of determining roof covering classifications will be used, which could lead to the use of inappropriate roof coverings, which could lead to fire growth and the spread of fire across the roof coverings, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

**Objective**

OP3

**Attributions**

[F02-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that an inappropriate method of determining a roof covering classification will be used, which could lead to the use of an inappropriate roof covering, which could lead to fire growth and the spread of fire across the roof covering, which could lead to the spread of fire to an adjacent building, which could lead to damage to the adjacent building.

---

**Provision: 3.1.15.2.(1)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that an inappropriately classified roof covering will be used, which could lead to fire growth and the spread of fire across the roof covering, which could lead to the spread of fire to occupied parts of the building, which could lead to harm to persons in the building.

*Intent 2.* To limit the probability that an inappropriately classified roof covering will be used, which could lead to fire growth and the spread of fire across the roof covering, which could lead to the spread of fire to an adjacent building, which could lead to harm to persons in the adjacent building.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that an inappropriately classified roof covering will be used, which could lead to fire growth and the spread of fire across the roof covering, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP3

### **Attributions**

[F02-OP3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that an inappropriately classified roof covering will be used, which could lead to fire growth and the spread of fire across the roof covering, which could lead to the spread of fire to an adjacent building, which could lead to damage to the adjacent building.

---

### **Provision: 3.1.15.2.(2)**

### **Intent(s)**

*Intent 1.* To exempt roof coverings for certain buildings from the application of Sentence 3.1.15.2.(1), which would otherwise require a classification, on the basis that:

- in the case of tents and air-supported structures, it is not practical to meet the fire test and classification criteria, and
- in the case of Group A, Division 2 occupancies, the conditions imposed provide an appropriate level of protection by limiting the size of the building and limiting the combustibility of the roof covering material exposed to a fire in the building.

---

### **Provision: 3.1.16.1.(1)**

### **Objective**

OS1

### **Attributions**

[F02-OS1.2, OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that certain fabrics having an inappropriately high flame-spread property will be used, which could lead to the spread of fire across the exposed surfaces of the fabric and to other parts of the building [interior or exterior], which could lead to:

- harm to persons, and
- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F02-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that certain fabrics having an inappropriately high flame-spread property will be used, which could lead to the spread of fire across the exposed surfaces of the fabric and to other parts of the building [interior or exterior], which could lead to damage to the building.

**Provision: 3.1.17.1.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability of overcrowding, which could lead to delayed egress during emergency evacuation, which could lead to harm to persons.

*Intent 2.* To determine the minimum design occupant load in order to calculate egress and exit capacity.

---

**Objective**

OH2

**Attributions**

[F72-OH2.1] [F71-OH2.3]

**Intent(s)**

*Intent 1.* To limit the probability of overcrowding, which could lead to the inability of persons to use water closets and lavatories in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

*Intent 2.* To determine the minimum design occupant load in order to calculate the minimum number of water closets.

**Provision: 3.1.17.1.(2)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability of overcrowding, which could lead to delayed egress during emergency evacuation, which could lead to harm to persons.

*Intent 2.* To exempt floor areas from the application of Sentence 3.1.17.1.(1) and allow for another occupant load if certain measures are taken to limit the probability of overcrowding.

---

**Objective**

OH2

**Attributions**

[F72-OH2.1] [F71-OH2.3]

**Intent(s)**

*Intent 1.* To limit the probability of overcrowding, which could lead to the inability of persons to use water closets and lavatories in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

*Intent 2.* To exempt floor areas from the application of Sentence 3.1.17.1.(1) and allow for another occupant load if certain measures are taken to limit the probability of overcrowding.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.1.17.1.(3)**

#### **Intent(s)**

*Intent 1.* To clarify that certain structures are considered part of the floor area.

---

### **Provision: 3.1.17.1.(4)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of overcrowding, which could lead to delayed egress during emergency evacuation, which could lead to harm to persons.

*Intent 2.* To determine the minimum design occupant load in order to calculate egress and exit capacity, when rooms are intended for different occupancies at different times.

---

#### **Objective**

OH2

#### **Attributions**

[F72-OH2.1] [F71-OH2.3]

#### **Intent(s)**

*Intent 1.* To limit the probability of overcrowding, which could lead to the inability of persons to use water closets and lavatories in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

*Intent 2.* To determine the minimum design occupant load in order to calculate the minimum number of water closets, when rooms are intended for different occupancies at different times.

---

### **Provision: 3.2.1.1.(1)**

#### **Intent(s)**

*Intent 1.* To exclude certain rooftop enclosures from the calculation of building height on the basis that such enclosures are normally only briefly and intermittently occupied by persons and thus do not pose an undue fire safety risk to persons.

---

### **Provision: 3.2.1.1.(2)**

#### **Intent(s)**

*Intent 1.* To exempt space under tiers of seats in buildings of the arena type from the calculation of building height on the basis that the space is used only for dressing rooms, concession stands and similar purposes, and thus does not pose an undue fire safety risk to persons.

---

### **Provision: 3.2.1.1.(3)**

#### **Intent(s)**

*Intent 1.* To exclude mezzanines from the calculation of building height if certain conditions are met that limit the size of the mezzanines and their degree of visual obstruction, on the basis that this configuration does not pose an undue fire safety risk to persons.

---

**Provision: 3.2.1.1.(4)**

---

**Intent(s)**

*Intent 1.* To exclude mezzanines from the calculation of building height and to exempt them from the conditions stated in Sentence 3.2.1.1.(3) if certain conditions are met that limit the size of the mezzanines, on the basis that this configuration does not pose an undue fire safety risk to persons.

---

**Provision: 3.2.1.1.(5)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentences 3.2.1.1.(3) and 3.2.1.1.(4), which would otherwise exclude mezzanines from the calculation of building height, and require that under certain conditions [where one or more levels of mezzanine is partially or wholly superimposed above another mezzanine in the storey] each level additional to the first level be considered as a storey in calculating the building height.

---

**Provision: 3.2.1.1.(6)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.1.1.(5), which would otherwise require that under certain conditions [where one or more levels of mezzanine is partially or wholly superimposed above another mezzanine in the storey] each level additional to the first level be considered as a storey in calculating the building height.

---

**Provision: 3.2.1.1.(7)**

---

**Intent(s)**

*Intent 1.* To exempt enclosed spaces from the application of Clause 3.2.1.1.(3)(b) if certain conditions are met that limit the size and location of the enclosed space on the mezzanine, on the basis that this situation does not pose an undue safety risk to persons.

---

**Provision: 3.2.1.1.(8)**

---

**Intent(s)**

*Intent 1.* To exempt certain service spaces from being considered as a storey in calculating the building height if certain conditions are met [the service spaces conform to Articles 3.2.5.14. and 3.3.1.24., and Sentences 3.2.4.19.(10), Sentence 3.2.7.3.(2), Sentence 3.3.1.3.(7), Sentence 3.4.2.4.(3) and 3.4.4.4.(9)], on the basis that such spaces do not impose an undue fire safety risk to persons.

*Intent 2.* To direct Code users to Articles 3.2.5.14. and 3.3.1.24., and Sentences 3.3.1.3.(7), Sentence 3.2.7.3.(2), Sentence 3.3.1.3.(7), Sentence 3.4.2.4.(3) and 3.4.4.4.(9).

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.1.2.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To allow a basement storage garage to be considered as a separate building from the portion above if certain measures are taken.

These measures are to limit the probability of the spread of fire from the garage to the upper portions of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons in the upper portions of the building, including emergency responders.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To allow a basement storage garage to be considered as a separate building from the portion above if certain measures are taken.

These measures are to limit the probability of the spread of fire from the garage to the upper portions of the building, which could lead to damage to the building.

### **Provision: 3.2.1.2.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To exempt openings in certain rated fire separations from the application of Sentence 3.2.1.2.(1), which would otherwise require rated closures, if certain measures are taken.

These measures are to limit the probability of the spread of fire from the garage to the upper portions of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons in the upper portions of the building, including emergency responders.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To exempt openings in certain rated fire separations from the application of Sentence 3.2.1.2.(1), which would otherwise require rated closures, if certain measures are taken.

These measures are to limit the probability of the spread of fire from the garage to the upper portions of the building, which could lead to damage to the building.

---

**Provision: 3.2.1.2.(3)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability of the spread of fire from the garage to the upper portion of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons in the upper portions of the building, including emergency responders.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability of the spread of fire from the garage to the upper portion of the building, which could lead to damage to the building.

---

**Provision: 3.2.1.3.(1)**

---

**Intent(s)**

*Intent 1.* To state the conditions under which roof assemblies must be considered as exterior walls for the purposes of the application of Section 3.2.

---

**Provision: 3.2.1.4.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2] [F04-OS1.3]

**Intent(s)**

*Intent 1.* To limit the probability of the spread of fire from the basement to an upper storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons, including emergency responders.

*Intent 2.* To limit the probability of the premature collapse of the floor assemblies in a fire situation during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons, including emergency responders.

*Intent 3.* To direct Code users to Articles 3.2.2.20. to 3.2.2.88. for the determination of minimum fire-resistance ratings for the floor assemblies.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2] [F04-OP1.3]

### **Intent(s)**

*Intent 1.* To limit the probability of the spread of fire from the basement to an upper storey, which could lead to damage to the building.

*Intent 2.* To limit the probability of the premature collapse of the floor assemblies in a fire situation, which could lead to damage to the building.

*Intent 3.* To direct Code users to Articles 3.2.2.20. to 3.2.2.88. for the determination of minimum fire-resistance ratings for the floor assemblies.

---

## **Provision: 3.2.1.4.(2)**

---

### **Objective**

OS1

### **Attributions**

[F04-OS1.2, OS1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the supports for a floor assembly will prematurely fail in a fire situation, which could lead to the collapse of the floor assembly, which could lead to the spread of fire from the basement to an upper storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons, including emergency responders.

*Intent 2.* To limit the probability that the supports for a floor assembly will prematurely fail in a fire situation, which could lead to the collapse of the floor assembly during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons, including emergency responders.

---

### **Objective**

OP1

### **Attributions**

[F04-OP1.2, OP1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the supports for a floor assembly will prematurely fail in a fire situation, which could lead to the collapse of the floor assembly, which could lead to the spread of fire from the basement to an upper storey, which could lead to damage to the building.

*Intent 2.* To limit the probability that the supports for a floor assembly will prematurely fail in a fire situation, which could lead to the collapse of the floor assembly, which could lead to damage to the building.

**Provision: 3.2.1.5.(1)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2, OS1.3]

**Intent(s)**

*Intent 1.* To limit the probability of the spread of fire within the basement, which could lead to harm to persons.

*Intent 2.* To limit the probability of the spread of fire within the basement, which could lead to the collapse of the floor assembly above the basement during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons, including emergency responders.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2, OP1.3]

**Intent(s)**

*Intent 1.* To limit the probability of the spread of fire within the basement, which could lead to damage to the building.

*Intent 2.* To limit the probability of the spread of fire within the basement, which could lead to the collapse of the floor assembly above the basement, which could lead to damage to the building.

**Provision: 3.2.1.5.(2)**

---

**Intent(s)**

*Intent 1.* To exempt open-air stories from the application of Sentence 3.2.1.5.(1), which would otherwise require the storey to be sprinklered or subdivided into fire compartments, on the basis that this situation does not pose an undue fire safety risk because heat and products of combustion from a fire can be dissipated.

**Provision: 3.2.1.6.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Articles 3.2.2.20. to 3.2.2.88. to certain mezzanine floor assemblies.

**Provision: 3.2.2.1.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to provisions throughout Subsection 3.2.2. that limit the probability of the spread of fire and collapse.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.2.2.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02, F03, F04-OS1.2, OS1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that inadequate fire safety features will contribute to the spread of fire or collapse, which could lead to a failure of the integrity of a fire separation or structural element, which could lead to the spread of fire and smoke or collapse, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F02, F03, F04-OP1.2, OP1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that inadequate fire safety features will contribute to the spread of fire or collapse, which could lead to the failure of the integrity of a fire separation or structural element, which could lead to the spread of fire and smoke or collapse, which could lead to damage to the building.

### **Provision: 3.2.2.3.(1)**

---

#### **Intent(s)**

*Intent 1.* To exempt from the application of Article 3.2.2.1., which relates to fire protection, certain noncombustible building elements that are not critical to the stability of the building's structural framework.

---

#### **Intent(s)**

*Intent 1.* To exempt from the application of Article 3.2.2.1., which relates to fire protection, certain exterior structural members that are effectively shielded from a fire inside the building, provided they are shielded from heat radiation in the event of a fire within the building by construction that will provide the same degree of protection that would be necessary if the member were located inside the building with the protection extending on either side of the member a distance equal to the projection of the member from the face of the wall.

### **Provision: 3.2.2.4.(1)**

---

#### **Intent(s)**

*Intent 1.* To clarify that Articles 3.2.2.20. to 3.2.2.88. apply to a building of a single major occupancy based on the height and area of the building.

### **Provision: 3.2.2.4.(2)**

---

#### **Intent(s)**

*Intent 1.* To state that Articles 3.2.2.5. to 3.2.2.8. provide rules relating to the treatment of multiple major occupancies in the same building.

**Provision: 3.2.2.5.(1)**

---

**Intent(s)**

*Intent 1.* To clarify the applicable height and area of a building.

**Provision: 3.2.2.6.(1)**

---

**Objective**

OS1

**Attributions**

[F02, F03, F04-OS1.2, OS1.3]

**Intent(s)**

*Intent 1.* To limit the probability that inadequate fire safety features will contribute to the spread of fire or collapse, which could lead to the failure of the integrity of a fire separation or structural element, which could lead to the spread of fire and smoke or collapse, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02, F03, F04-OP1.2, OP1.3]

**Intent(s)**

*Intent 1.* To limit the probability that inadequate fire safety features will contribute to the spread of fire or collapse, which could lead to the failure of the integrity of a fire separation or structural element, which could lead to the spread of fire and smoke or collapse, which could lead to damage to the building.

**Provision: 3.2.2.7.(1)**

---

**Intent(s)**

*Intent 1.* To clarify that the requirements of Subsection 3.2.2. for each portion of a building containing a major occupancy are to be applied to that portion as if the entire building were of that major occupancy.

*Intent 2.* To override the requirement of Sentence 3.2.2.6.(1) which states that the entire building must be constructed in accordance with the most stringent requirements of each of the different major occupancies in the building.

**Provision: 3.2.2.7.(2)**

---

**Intent(s)**

*Intent 1.* To clarify that the requirements of Subsection 3.2.2., pertaining to the minimum fire-resistance rating of floors for each portion of a building containing a major occupancy, are to be applied to that portion as if the entire building were of that major occupancy.

*Intent 2.* To override the requirement of Sentence 3.2.2.6.(1) which states that the entire building must be constructed in accordance with the most stringent requirements of each of the different major occupancies in the building.

**Provision: 3.2.2.8.(1)**

---

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To exempt buildings containing certain occupancies of limited area from the application of Sentence 3.2.2.6.(1) and 3.2.2.7., which might otherwise impose more onerous requirements for floors, roofs, and supporting elements, on the basis that these occupancies do not occupy a significant portion of the floor area.

---

### **Provision: 3.2.2.9.(1)**

### **Intent(s)**

*Intent 1.* To clarify the criteria used to determine if a crawl space has to be designed in accordance with the rules for basements stated in Articles 3.2.1.4. and 3.2.1.5.

---

### **Provision: 3.2.2.9.(2)**

### **Intent(s)**

*Intent 1.* To exempt the floor assembly above a crawl space from the requirements of Subsection 3.2.2. with regard to fire separations and fire-resistance rating.

---

### **Provision: 3.2.2.10.(1)**

### **Objective**

OS1

### **Attributions**

[F12-OS1.2, OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that fire emergency response operations will be delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F12-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire emergency response operations will be delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

### **Provision: 3.2.2.10.(2)**

### **Intent(s)**

*Intent 1.* To clarify that an access route conforming to Subsection 3.2.5. is acceptable as a street for the purposes of Subsections 3.2.2. and 3.2.5.

**Provision: 3.2.2.10.(3)**

---

**Intent(s)**

*Intent 1.* To clarify that a building that has not less than 50% of its perimeter within 15 m of a street or streets is considered to face two streets for the purposes of Subsection 3.2.2.

**Provision: 3.2.2.10.(4)**

---

**Intent(s)**

*Intent 1.* To clarify that a building that has not less than 75% of its perimeter within 15 m of a street or streets is considered to face three streets for the purposes of Subsection 3.2.2.

**Provision: 3.2.2.10.(5)**

---

**Intent(s)**

*Intent 1.* To clarify that enclosed spaces, tunnels, bridges and similar structures are not streets for the purposes of Part 3, more specifically Subsections 3.2.2. and 3.2.5.

**Provision: 3.2.2.11.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Articles 3.2.2.20. to 3.2.2.88. to include the construction requirements of an exterior balcony.

**Provision: 3.2.2.12.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Articles 3.2.2.20. to 3.2.2.88. relating to mezzanines to include an elevated exterior passageway used as part of a means of egress.

**Provision: 3.2.2.13.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Articles 3.2.2.20. to 3.2.2.88. relating to floor assemblies to include the portion of a roof that supports an occupancy.

**Provision: 3.2.2.14.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Articles 3.2.2.20. to 3.2.2.88. to a roof-top enclosure for elevator machinery or a service room.

**Provision: 3.2.2.14.(2)**

---

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt the roof assembly and the supporting elements of a roof-top enclosure for elevator machinery or for a service room from the application of Articles 3.2.2.20. to 3.2.2.88. relating to fire-resistance ratings.

---

### **Provision: 3.2.2.14.(3)**

#### **Intent(s)**

*Intent 1.* To expand the application of Articles 3.2.2.20. to 3.2.2.88. to the type of construction for the portion of a stairway enclosure that is above a roof.

---

### **Provision: 3.2.2.14.(4)**

#### **Intent(s)**

*Intent 1.* To exempt the roof assembly and the supporting elements of a roof-top enclosure for a stairway from the application of Articles 3.2.2.20. to 3.2.2.88. relating to fire-resistance ratings and fire separations.

---

### **Provision: 3.2.2.15.(1)**

#### **Intent(s)**

*Intent 1.* To clarify that minimum precautions against the spread of fire and collapse shall be the same as those required for basements under a building of 1 storey in building height having the same occupancy and building area.

---

### **Provision: 3.2.2.15.(2)**

#### **Objective**

OS1

#### **Attributions**

3.2.2.15.(2)(a) [F02, F04-OS1.2, OS1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 4.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

### **Provision: 3.2.2.15.(3)**

### **Intent(s)**

*Intent 1.* To exclude a basement used as a residential occupancy from the requirements of Clause 3.2.2.15.(2)(a) pertaining to the installation of an automatic sprinkler system.

*Intent 2.* To expand the application of Sentence 3.2.5.1.(1) to a storey of residential occupancy located immediately below the first storey and that is not required to be sprinklered.

---

### **Provision: 3.2.2.16.(1)**

### **Intent(s)**

*Intent 1.* To exempt certain buildings from the application of Articles 3.2.2.20., Article 3.2.2.23., Article 3.2.2.24., Article 3.2.2.29., Article 3.2.2.31., Article 3.2.2.36., Article 3.2.2.37., Article 3.2.2.38., Article 3.2.2.39., Article 3.2.2.48., Article 3.2.2.54., Article 3.2.2.62., Article 3.2.2.68., Article 3.2.2.72., Article 3.2.2.73., Article 3.2.2.78., and 3.2.2.80., which would otherwise require the roof assembly to be of noncombustible construction, and permit a roof assembly of heavy timber construction.

**Provision: 3.2.2.16.(2)**

---

**Intent(s)**

*Intent 1.* To exempt buildings referred to in Sentence 3.2.2.6.(1) from the application of Articles 3.2.2.20., Article 3.2.2.23., Article 3.2.2.24., Article 3.2.2.29., Article 3.2.2.31., Article 3.2.2.36., Article 3.2.2.37., Article 3.2.2.38., Article 3.2.2.39., Article 3.2.2.48., Article 3.2.2.54., Article 3.2.2.62., Article 3.2.2.68., Article 3.2.2.72., Article 3.2.2.73., Article 3.2.2.78., and 3.2.2.80., which would otherwise require the structural members to be of noncombustible construction, and permit structural members of heavy timber construction.

**Provision: 3.2.2.17.(1)**

---

**Intent(s)**

*Intent 1.* To exempt certain buildings from the application of Articles 3.2.2.25., Article 3.2.2.30., and 3.2.2.32., which would otherwise require the roof assembly to have a fire-resistance rating.

**Provision: 3.2.2.18.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Articles 3.2.4.8., Article 3.2.4.9., Article 3.2.4.10., and 3.2.5.12. for requirements for the installation of a sprinkler system required by one or more of Articles 3.2.2.20. to 3.2.2.86.

**Provision: 3.2.2.18.(2)**

---

**Objective**

OS1

**Attributions**

[F02, F04-OS1.2, OS1.3]

**Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

### **Objective**

OP1

### **Attributions**

[F02, F04-OP1.2, OP1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Provision: 3.2.2.19.(1)**

---

### **Intent(s)**

*Intent 1.* To exempt certain buildings from the application of Articles 3.2.2.36. and 3.2.2.37., which might otherwise require more stringent requirements than would normally be needed for the type of building use, on the basis that the building is limited in size, the occupant load is restricted, there are no sleeping areas, there is free movement within the space, the fire load is not high, and the building is fully sprinklered. [Persons should not be unduly delayed in reaching a safe place or be exposed to a spreading fire.]

---

### **Provision: 3.2.2.20.(1)**

---

### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.2.20.(2).

---

### **Provision: 3.2.2.20.(2)**

---

### **Objective**

OS1

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported mezzanine during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that a mezzanine exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

3.2.2.22.(2)(b), 3.2.2.22.(2)(c) [F04-OP1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported mezzanine during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that a mezzanine exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Provision: 3.2.2.23.(1)**

---

### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.2.23.(2)

---

### **Provision: 3.2.2.23.(2)**

---

### **Objective**

OS1

### **Attributions**

[F02-OS1.2] Applies to portion of Code text: "... the *building* referred to in Sentence 3.2.2.23.(1) shall be of *noncombustible construction* ..."

### **Intent(s)**

*Intent 1.* To limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

### **Attributions**

3.2.2.23.(2)(a)

### **Intent(s)**

*Intent 1.* To exclude the upper storeys of a building from the requirements of automatic sprinkler system installation on the basis that Articles 3.2.2.20. to 3.2.2.88. would not otherwise require sprinkler installation.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2] Applies to portion of Code text: "... the *building* referred to in Sentence 3.2.2.23.(1) shall be of *noncombustible construction* ..."

**Intent(s)**

*Intent 1.* To limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

**Intent(s)**

*Intent 1.* To exempt a heavy timber roof structure and its immediate supports, complying with Article 3.2.2.16., from the requirement for noncombustible construction.

---

**Objective**

OS1

**Attributions**

[F02, F04-OS1.2, OS1.3] Applies to portion of Code text: "... a) ... the *building* shall be *sprinklered* throughout ..."

**Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

---

**Provision: 3.2.2.25.(2)**

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To clarify that there are no restrictions on the use of combustible or noncombustible construction, as defined in Section 3.1.

---

### **Objective**

OS1

### **Attributions**

[F04-OS1.3] Applies to portion of Code text: "... c) roof assemblies shall have, if of *combustible construction*, a *fire-resistance rating* not less than 45 min, ..." and to Clause 3.2.2.25.(2)(d).

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported combustible roof assembly during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that a combustible roof assembly exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F04-OP1.3] Applies to portion of Code text: "... c) roof assemblies shall have, if of *combustible construction*, a *fire-resistance rating* not less than 45 min, ..." and to Clause 3.2.2.25.(2)(d).

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported combustible roof assembly during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that a combustible roof assembly exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Attributions**

3.2.2.25.(2)(c)

### **Intent(s)**

*Intent 1.* To exclude a fire-retardant treated wood roof system from the fire-resistance rating requirements on the basis that the building is restricted to one storey in building height, the system conforms to Article 3.1.14.1., and the building area is restricted in size.

---

### **Objective**

OS1

### **Attributions**

3.2.2.25.(2)(a) [F03-OS1.2] Applies to the requirement that *noncombustible* floor assemblies be *fire separations*.

### **Intent(s)**

*Intent 1.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior

of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

3.2.2.25.(2)(a) [F03-OP1.2] Applies to the requirement that *noncombustible* floor assemblies be *fire separations*.

**Intent(s)**

*Intent 1.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

**Intent 1.** To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 2.** To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 3.** To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 4.** To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 5.** To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Provision: 3.2.2.26.(2)**

#### **Intent(s)**

**Intent 1.** To clarify that there are no restrictions on the use of combustible or noncombustible construction, as defined in Section 3.1.

---

#### **Objective**

OS1

#### **Attributions**

3.2.2.26.(2)(a) [F03-OS1.2] Applies to the requirement that *noncombustible* floor assemblies be *fire separations*.

#### **Intent(s)**

**Intent 1.** To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

3.2.2.26.(2)(a) [F03-OP1.2] Applies to the requirement that *noncombustible* floor assemblies be *fire separations*.

#### **Intent(s)**

**Intent 1.** To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.2.31.(2)

---

### **Attributions**

3.2.2.31.(1)(a)

### **Intent(s)**

*Intent 1.* To exclude the upper storeys of a building from the requirements of automatic sprinkler system installation on the basis that Articles 3.2.2.20. to 3.2.2.88. would not otherwise require sprinkler installation.

---

### **Objective**

OS1

### **Attributions**

[F02, F04-OS1.2, OS1.3] Applies to portion of Code text: "... a) ... the *building* is *sprinklered* throughout ..."

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F02, F04-OP1.2, OP1.3] Applies to portion of Code text: "... a) ... the *building* is *sprinklered* throughout ..."

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 2.** To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 3.** To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 4.** To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 5.** To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

**Provision: 3.2.2.31.(2)**

---

**Intent(s)**

**Intent 1.** To exempt a heavy timber roof structure and its immediate supports, complying with Article 3.2.2.16., from the requirement for noncombustible construction.

---

**Objective**

OS1

**Attributions**

[F02-OS1.2] Applies to portion of Code text: "Except as permitted by Clause 3.2.2.31.(2)(c) ... the *building* referred to in Sentence 3.2.2.31.(1) shall be of *noncombustible construction* ..."

**Intent(s)**

**Intent 1.** To limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2] Applies to portion of Code text: "Except as permitted by Clause 3.2.2.31.(2)(c) ... the *building* referred to in Sentence 3.2.2.31.(1) shall be of *noncombustible construction* ..."

**Intent(s)**

**Intent 1.** To limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Attributions**

3.2.2.32.(2)(b)

### **Intent(s)**

*Intent 1.* To clarify that a noncombustible roof assembly does not require a fire-resistance rating.

---

### **Objective**

OS1

### **Attributions**

[F04-OS1.3] Applies to portion of Code text: "... b) roof assemblies shall have, if of *combustible construction*, a *fire-resistance rating* not less than 45 min, ..." and to Clause (c).

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported combustible roof assembly during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that a combustible roof assembly exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F04-OP1.3] Applies to portion of Code text: "... b) roof assemblies shall have, if of *combustible construction*, a *fire-resistance rating* not less than 45 min, ..." and to Clause (c).

**Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported combustible roof assembly during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that a combustible roof assembly exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

**Attributions**

3.2.2.32.(2)(b)

**Intent(s)**

*Intent 1.* To exclude a fire-retardant treated wood roof system from the fire-resistance rating requirements on the basis that the building is restricted to one storey in building height, the system conforms to Article 3.1.14.1., and the building area is restricted in size.

**Provision: 3.2.2.32.(3)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2] [F04-OS1.3]

**Intent(s)**

*Intent 1.* To limit the probability that high fire loads present during trade shows and similar exhibitions will lead to harm to persons in the event of a fire.

*Intent 2.* To limit the probability that a fire will spread rapidly through the building, which could lead to building collapse during the time required to achieve safe occupant egress and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Objective**

OP1

3.2.2.36.(2)(b), 3.2.2.36.(2)(d) [F03-OP1.2] [F04-OP1.2, OP1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 4.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

## **Intent Statements: NBC 2010**

*Intent 2.* To limit the probability that a mezzanine exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Provision: 3.2.2.40.(1)**

---

#### **Attributions**

3.2.2.40.(1)(b), 3.2.2.40.(1)(c)

#### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.2.40.(2).

---

#### **Attributions**

3.2.2.40.(1)(a)

#### **Intent(s)**

*Intent 1.* To exclude the upper storeys of a building from the requirements of automatic sprinkler system installation on the basis that Articles 3.2.2.20. to 3.2.2.88. would not otherwise require sprinkler installation.

---

#### **Objective**

OS1

#### **Attributions**

[F02, F04-OS1.2, OS1.3] Applies to portion of Code text: "... a) ... the *building* is *sprinklered* throughout ..."

#### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**[F02, F04-OP1.2, OP1.3] Applies to portion of Code text: "... a) ... the *building* is *sprinklered* throughout ..."**Intent(s)**

- Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.
- Intent 2.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.
- Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.
- Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.
- Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

**Provision: 3.2.2.40.(2)**

---

**Intent(s)**

- Intent 1.* To clarify that there are no restrictions on the use of combustible or noncombustible construction, as defined in Section 3.1.

---

3.2.2.43.(2)(b), 3.2.2.43.(2)(c) [F04-OP1.3]

**Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported mezzanine during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

*Intent 2.* To limit the probability that a mezzanine exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Provision: 3.2.2.44.(1)**

---

#### **Attributions**

3.2.2.44.(1)(b), 3.2.2.44.(1)(c)

#### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.2.44.(2).

---

#### **Attributions**

3.2.2.44.(1)(a)

#### **Intent(s)**

*Intent 1.* To exclude the upper storeys of a building from the requirements of automatic sprinkler system installation on the basis that Articles 3.2.2.20. to 3.2.2.83. would not otherwise require sprinkler installation.

---

#### **Objective**

OS1

#### **Attributions**

[F02, F04-OS1.2, OS1.3] Applies to portion of Code text: "... a) ... the *building* is *sprinklered* throughout ..."

#### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Objective**

OP1

3.2.2.63.(1)(a)

### **Intent(s)**

**Intent 1.** To exclude the upper storeys of a building from the requirements of automatic sprinkler system installation on the basis that Articles 3.2.2.20. to 3.2.2.88. would not otherwise require sprinkler installation.

---

**Objective**

OS1

**Attributions**

[F02, F04-OS1.2, OS1.3] Applies to portion of Code text: "... a) ... the *building* is *sprinklered* throughout ..."

**Intent(s)**

**Intent 1.** To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

**Intent 2.** To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

**Intent 3.** To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

**Intent 4.** To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

**Intent 5.** To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02, F04-OP1.2, OP1.3] Applies to portion of Code text: "... a) ... the *building* is *sprinklered* throughout ..."

**Intent(s)**

**Intent 1.** To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 2.** To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

**Intent 3.** To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

*Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Provision: 3.2.2.63.(2)**

---

#### **Intent(s)**

*Intent 1.* To clarify that there are no restrictions on the use of combustible or noncombustible construction, as defined in Section 3.1.

---

#### **Objective**

OS1

#### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 4.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported mezzanine during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that a mezzanine exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Provision: 3.2.2.76.(1)**

#### **Attributions**

3.2.2.76.(1)(a), 3.2.2.76.(1)(b)

#### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.2.76.(2).

---

### **Provision: 3.2.2.76.(2)**

#### **Intent(s)**

*Intent 1.* To clarify that there are no restrictions on the use of combustible or noncombustible construction, as defined in Section 3.1.

---

#### **Objective**

OS1

#### **Attributions**

3.2.2.76.(2)(a) [F03-OS1.2] Applies to the requirement that *noncombustible* floor assemblies be *fire separations*.

#### **Intent(s)**

*Intent 1.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

3.2.2.76.(2)(a) [F03-OP1.2] Applies to the requirement that *noncombustible* floor assemblies be *fire separations*.

OP1

### **Attributions**

[F03-OP1.2] [F04-OP1.2, OP1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 4.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

## **Provision: 3.2.2.78.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.2.78.(2).

**Provision: 3.2.2.78.(2)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2] Applies to portion of Code text: "... the *building* referred to in Sentence 3.2.2.78.(1) shall be of *noncombustible construction* ..."

**Intent(s)**

*Intent 1.* To limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Attributions**

3.2.2.78.(2)(a)

**Intent(s)**

*Intent 1.* To exclude the upper storeys of a building from the requirements of automatic sprinkler system installation on the basis that Articles 3.2.2.20. to 3.2.2.78. would not otherwise require sprinkler installation.

---

**Attributions**

3.2.2.78.(2)(b)

**Intent(s)**

*Intent 1.* To exclude the floor assembly in an open-air storage garage from the 2 h fire-resistance rating on the basis that a 1 h rating is provided and that the fire load is low and the potential number of occupants exposed to a fire hazard at any one time is low.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2] Applies to portion of Code text: "... the *building* referred to in Sentence 3.2.2.78.(1) shall be of *noncombustible construction* ..."

**Intent(s)**

*Intent 1.* To limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

**Intent(s)**

*Intent 1.* To exempt a heavy timber roof structure and its immediate supports, complying with Article 3.2.2.16., from the requirement for noncombustible construction.

---

## **Intent Statements: NBC 2010**

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F02, F04-OP1.2, OP1.3] Applies to portion of Code text: "... a) ... the *building is sprinklered* throughout ..."

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Provision: 3.2.2.80.(2)**

### **Intent(s)**

*Intent 1.* To exempt a heavy timber roof structure and its immediate supports, complying with Article 3.2.2.16., from the requirement for noncombustible construction.

---

**Objective**

OS1

**Attributions**

[F02-OS1.2] Applies to portion of Code text: "... the *building* referred to in Sentence 3.2.2.80.(1) shall be of *noncombustible construction* ..."

**Intent(s)**

*Intent 1.* To limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2] Applies to portion of Code text: "... the *building* referred to in Sentence 3.2.2.80.(1) shall be of *noncombustible construction* ..."

**Intent(s)**

*Intent 1.* To limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

3.2.2.80.(2)(a), 3.2.2.80.(2)(c) [F03-OS1.2] [F04-OS1.2, OS1.3]

**Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 4.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

OS1

### **Attributions**

3.2.2.80.(2)(b), 3.2.2.80.(2)(c) [F04-OS1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported mezzanine during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that a mezzanine exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

3.2.2.80.(2)(b), 3.2.2.80.(2)(c) [F04-OP1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported mezzanine during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that a mezzanine exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

**Provision: 3.2.2.81.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.2.81.(2).

---

**Provision: 3.2.2.81.(2)**

---

**Intent(s)**

*Intent 1.* To clarify that there are no restrictions on the use of combustible or noncombustible construction, as defined in Section 3.1.

---

**Objective**

OS1

**Attributions**

[F04-OS1.3] Applies to portion of Code text: "... c) roof assemblies shall have, if of *combustible construction*, a *fire-resistance rating* not less than 45 min ..." and to Clause (d).

**Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported combustible roof assembly during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

*Intent 2.* To limit the probability that a combustible roof assembly exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F04-OP1.3] Applies to portion of Code text: "... c) roof assemblies shall have, if of *combustible construction*, a *fire-resistance rating* not less than 45 min, ..." and to Clause (d).

**Intent(s)**

*Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of a supported combustible roof assembly during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

*Intent 2.* To limit the probability that a combustible roof assembly exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

**Attributions**

3.2.2.81.(2)(c)

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To exclude a fire-retardant treated wood roof system from the fire-resistance rating requirements on the basis that the building is restricted to one storey in building height, the system conforms to Article 3.1.14.1., and the building area is restricted in size.

---

### **Objective**

OS1

### **Attributions**

3.2.2.81.(2)(a) [F03-OS1.2] Applies to the requirement that *noncombustible* floor assemblies be *fire separations*.

### **Intent(s)**

*Intent 1.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

3.2.2.81.(2)(a) [F03-OP1.2] Applies to the requirement that *noncombustible* floor assemblies be *fire separations*.

### **Intent(s)**

*Intent 1.* To limit the probability that floor assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

### **Objective**

OS1

[F02, F04-OS1.2, OS1.3] Applies to portion of Code text: "... a) ... the *building* is *sprinklered* throughout ..."

### **Intent(s)**

- Intent 1.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor or roof assemblies during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.
- Intent 2.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.
- Intent 3.* To limit the probability that loadbearing walls, columns and arches exposed to fire will prematurely fail or collapse, which could lead to the failure or collapse of supported floor assemblies, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.
- Intent 4.* To limit the probability that floor or roof assemblies exposed to fire will prematurely fail or collapse, which could lead to the spread of fire from a lower storey of a building to an upper storey or to the exterior of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.
- Intent 5.* To limit the probability that, in the event of a fire, the absence of fire suppression systems within a storey will lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

#### **Intent(s)**

*Intent 1.* To state the application of Article 3.2.2.88.

---

## Intent Statements: NBC 2010

---

### Objective

OS1

### Attributions

[F02-OS1.2] Applies to portion of Code text: “A building used as a storage garage with all storeys constructed as open-air storeys and having no other occupancy above it is permitted to have its floor, wall, ceiling and roof assemblies constructed without a fire-resistance rating provided it is: a) of noncombustible construction...”

### Intent(s)

*Intent 1.* To exempt certain buildings from the requirements for a fire-resistance rating of floor, wall, ceiling and roof assemblies in Articles 3.2.2.78. to 3.2.2.84. if measures are taken to limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons.

---

### Objective

OP1

### Attributions

[F02-OP1.2] Applies to portion of Code text: “A building used as a storage garage with all storeys constructed as open-air storeys and having no other occupancy above it is permitted to have its floor, wall, ceiling and roof assemblies constructed without a fire-resistance rating provided it is: a) of noncombustible construction...”

### Intent(s)

*Intent 1.* To exempt certain buildings from the requirements for a fire-resistance rating of floor, wall, ceiling and roof assemblies in Articles 3.2.2.78. to 3.2.2.84. if measures are taken to limit the probability that combustible construction materials within a storey of a building will be involved in a fire, which could lead to the growth of fire, which could lead to the spread of fire within the storey during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to damage to the building.

---

## Provision: 3.2.3.1.(1)

---

### Objective

OP3

### Attributions

[F03-OP3.1]

### Intent(s)

*Intent 1.* To limit the probability of the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

*Intent 2.* To direct Code users to Article 3.2.3.2. for the calculation of the maximum area of unprotected openings in an exposing building face.

---

## Provision: 3.2.3.1.(2)

---

### Intent(s)

---

## **Intent Statements: NBC 2010**

*Intent 1.* To clarify how the area of unprotected openings is calculated using Tables 3.2.3.1.-B, Table 3.2.3.1.-C, Table 3.2.3.1.-D or 3.2.3.1.-E

---

### **Provision: 3.2.3.1.(3)**

---

#### **Intent(s)**

*Intent 1.* To clarify how the type of construction and cladding, and the fire-resistance rating of an exterior wall are determined in Subsection 3.3.

*Intent 2.* To direct Code users to Sentences 3.2.3.2.(2) and 3.2.3.2.(3) for requirements pertaining to fire compartments.

*Intent 3.* To direct Code users to Tables 3.2.3.1.-B, Table 3.2.3.1.-C, Table 3.2.3.1.-D or 3.2.3.1.-E for the calculation of the maximum area of unprotected openings in an exposing building face.

---

### **Provision: 3.2.3.1.(4)**

---

#### **Intent(s)**

*Intent 1.* To clarify how the actual percentage of unprotected openings permitted in an exterior wall is determined in Subsection 3.2.3.

---

### **Provision: 3.2.3.1.(5)**

---

#### **Objective**

OP3

#### **Attributions**

[F03-OP3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a building that is close to the property line to an adjacent building through concentrations of unprotected opening areas during the time required for emergency responders to perform their duties, which could lead to damage to the adjacent building.

---

### **Provision: 3.2.3.1.(6)**

---

#### **Objective**

OP3

#### **Attributions**

[F03-OP3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a building that is close to the property line to an adjacent building through closely spaced unprotected openings during the time required for emergency responders to perform their duties, which could lead to damage to the adjacent building.

---

### **Provision: 3.2.3.1.(7)**

---

#### **Intent(s)**

*Intent 1.* To define the configuration of a single room or space for the determination of minimum spacing requirements of unprotected openings in exposing building faces.

---

**Intent Statements: NBC 2010****Provision: 3.2.3.1.(8)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* This is to limit the probability of the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

**Provision: 3.2.3.1.(9)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To state how to treat radiation from the hot unexposed wall surface and add an equivalent area in calculating the area of unprotected openings in an exposing building face. This is to limit the probability of the spread of fire from the building to an adjacent building, which could lead to damage to adjacent buildings.

**Provision: 3.2.3.1.(10)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To state how to treat closures and add an equivalent area in calculating the area of unprotected openings in an exposing building face. This is to limit the probability of the spread of fire from the building to an adjacent building, which could lead to damage to adjacent buildings.

*Intent 2.* To direct Code users to Sentence 3.2.3.1.(9) for the calculation of the area of unprotected openings in an exposing building face.

**Provision: 3.2.3.2.(1)**

---

**Intent(s)**

*Intent 1.* To state how to calculate the area of an exposing building face.

**Provision: 3.2.3.2.(2)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.3.2.(1) and state a different [less onerous] method for calculating the area of an exposing building face, if certain conditions are met, on the basis that the conditions provide an equivalent level of protection.

This [the conditions] is to limit the probability that an entire exposing building face will be involved in a fire, which could lead to the spread of fire from the subject building to an adjacent building, which could lead to damage to the adjacent building.

**Provision: 3.2.3.2.(3)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.3.2.(1) and state a different [less onerous] calculation method for determining the area of an exposing building face, if certain conditions are met, on the basis that the conditions provide an equivalent level of protection. These conditions are to limit the probability that an entire exposing building face will be involved in a fire, which could lead to the spread of fire from the building to an adjacent building, which could lead to damage to adjacent buildings.

**Provision: 3.2.3.3.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Article 3.2.3.7., which would otherwise not apply to an exterior wall enclosing an attic or roof space located above an exposing building face.

**Provision: 3.2.3.4.(1)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from the building to an adjacent building during the time needed for emergency responders to carry out their duties, which could lead to damage to adjacent buildings.

*Intent 2.* To expand the definition and applicable requirements of this Code for a firewall [more specifically Subsections 3.1.8. and 3.1.10.] and make them also applicable to a party wall.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.3.5.(1)**

---

#### **Objective**

OP3

#### **Attributions**

[F03-OP3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability of the spread of fire from the building to an adjacent building through unprotected openings, which could lead to damage to adjacent buildings.

*Intent 2.* To limit the probability that closures will have insufficient fire resistance, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

### **Provision: 3.2.3.5.(2)**

---

#### **Objective**

OP3

#### **Attributions**

[F03-OP3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a closure will be constructed of a material that would not adequately control the spread of fire by means of radiation through exterior openings, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

*Intent 2.* To limit the application of Sentence 3.2.3.5.(1) and prohibit the use of wired glass or glass block as closures in openings in certain walls.

### **Provision: 3.2.3.6.(1)**

---

#### **Objective**

OP3

#### **Attributions**

[F03-OP3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability of the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

### **Provision: 3.2.3.6.(2)**

---

#### **Objective**

OP3

#### **Attributions**

[F03-OP3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from the building to an adjacent building through roof soffits where buildings are very closely spaced during the time required for emergency responders to perform their duties, which could lead to damage to the adjacent building.

---

**Provision: 3.2.3.6.(3)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from the building to an adjacent building through roof soffits where buildings are closely spaced during the time required for emergency responders to perform their duties, which could lead to damage to the adjacent building.

---

**Provision: 3.2.3.6.(4)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from the building to an adjacent building through roof soffits or openings in soffits where buildings are very closely spaced during the time required for emergency responders to perform their duties, which could lead to damage to the adjacent building.

---

**Provision: 3.2.3.6.(5)**

---

**Intent(s)**

*Intent 1.* To clarify that combustible or noncombustible finish material may be installed on protected soffits where these would not affect the degree of combustibility of the building.

---

**Provision: 3.2.3.7.(1)**

---

**Objective**

OP3

**Attributions**

[F03, F02-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that an exposing building face will have insufficient fire resistance, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

*Intent 2.* To limit the probability that an exposing building face will be ignited and contribute to a fire, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.3.7.(2)**

---

#### **Objective**

OP3

#### **Attributions**

[F03, F02-OP3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that an exposing building face will have insufficient fire resistance, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

*Intent 2.* To limit the probability that exterior cladding will be ignited and contribute to, or be involved in, a fire, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

### **Provision: 3.2.3.7.(3)**

---

#### **Objective**

OP3

#### **Attributions**

[F02, F03-OP3.1]

#### **Intent(s)**

*Intent 1.* To exempt cladding from the requirements of Sentences 3.2.3.7.(1) and 3.2.3.7.(2) [specifically “Type of Cladding Required” in Table 3.2.3.7.], if certain conditions are met.

This is to limit the probability that:

- fire will spread from the subject building to an adjacent building, which could lead to damage to the adjacent building,
- fire will spread from the subject building to an adjacent building through unprotected openings, which could lead to damage to the adjacent building, and
- an exposing building face will be ignited and contribute to, or be involved in, a fire, which could lead to the spread of fire from the subject building to an adjacent building, which could lead to damage to the adjacent building.

### **Provision: 3.2.3.7.(4)**

---

#### **Objective**

OP3

#### **Attributions**

[F03, F02-OP3.1]

#### **Intent(s)**

*Intent 1.* To exempt cladding from the requirements of Sentences 3.2.3.7.(1) and 3.2.3.7.(2) [specifically “Type of Cladding Required” in Table 3.2.3.7.], if certain conditions are met.

This is to limit the probability that:

- fire will spread from the subject building to an adjacent building, which could lead to damage to the adjacent building,

---

## **Intent Statements: NBC 2010**

- fire will spread from the subject building to an adjacent building through unprotected openings, which could lead to damage to the adjacent building, and
- an exposing building face will be ignited and contribute to, or be involved in, a fire, which could lead to the spread of fire from the subject building to an adjacent building, which could lead to damage to the adjacent building.

---

### **Provision: 3.2.3.7.(5)**

#### **Intent(s)**

*Intent 1.* To exempt wall assemblies from the requirements of Table 3.2.3.7., if certain conditions are met [the wall assembly conforms to Article 3.1.5.5. and is shown to have low potential for the vertical spread of fire].

*Intent 2.* To direct Code users to Article 3.1.5.5. for requirements pertaining to combustible components for exterior walls.

---

### **Provision: 3.2.3.7.(6)**

#### **Intent(s)**

*Intent 1.* To clarify the sequence of application of Article 3.2.3.12. with respect to Sentences 3.2.3.7.(1) and 3.2.3.7.(2).

---

### **Provision: 3.2.3.8.(1)**

#### **Objective**

OP3

#### **Attributions**

[F03, F02-OP3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that an exposing building face will have insufficient fire resistance, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

*Intent 2.* To limit the probability that the foamed plastic insulation will be ignited and contribute to, or be involved in, a fire, which could lead to the spread of fire from the building to an adjacent building during the time required for emergency responders to perform their duties, which could lead to damage to adjacent buildings.

---

### **Provision: 3.2.3.8.(2)**

#### **Intent(s)**

*Intent 1.* To state the criteria for testing and the conditions of acceptance for wall assemblies tested in compliance with Clause 3.2.3.8.(1)(b).

---

### **Provision: 3.2.3.8.(3)**

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt wall assemblies from the requirements of Sentence 3.2.3.8.(1), if certain conditions are met [the wall assembly conforms to Article 3.1.5.5. and is shown to have low potential for the vertical spread of fire].

*Intent 2.* To direct Code users to Article 3.1.5.5. for requirements pertaining to combustible components for exterior walls.

---

### **Provision: 3.2.3.9.(1)**

#### **Objective**

OS1

#### **Attributions**

[F04-OS1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that the structural members in the subject building will prematurely fail from exposure to a fire outside of the building during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to harm to persons in the subject building.

---

#### **Objective**

OP1

#### **Attributions**

[F04-OP1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that the structural members in the subject building will prematurely fail from exposure to a fire outside of the building during the time required for emergency responders to perform their duties, which could lead to damage to the subject building.

---

### **Provision: 3.2.3.9.(2)**

#### **Intent(s)**

*Intent 1.* To exempt exterior structural members of heavy timber construction from the application of Table 3.2.3.7., which would otherwise require noncombustible cladding, if their distance from a property line or centreline of a public thoroughfare is sufficient to limit the probability of severe exposure to a fire.

---

### **Provision: 3.2.3.10.(1)**

#### **Objective**

OP3

#### **Attributions**

[F03-OP3.1]

#### **Intent(s)**

*Intent 1.* To exempt open-air storage garages from the requirements of Sentences 3.1.5.5.(2), 3.2.3.1.(1), 3.2.3.7.(1) and 3.2.3.7.(2), which would otherwise limit the area of unprotected openings, and permit unlimited unprotected openings, on the basis that the fire load of the contents is relatively low, the space is well ventilated and the limiting distance is not less than 3 m. These conditions are to limit the

probability of the spread of fire from the garage to an adjacent building, which could lead to damage to adjacent buildings.

---

**Provision: 3.2.3.10.(2)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To exempt certain exposing building faces from the requirements of Sentences 3.1.5.5.(2), 3.2.3.1.(1) , 3.2.3.7.(1) and 3.2.3.7.(2), which would otherwise limit the area of unprotected openings, and permit unlimited unprotected openings, on the basis that the building face is readily accessible to firefighters [who can effectively carry out fire suppression operations] and the limiting distance is not less than 9 m. These conditions are to limit the probability of the spread of fire from the building to an adjacent building, which could lead to damage to adjacent buildings.

---

**Provision: 3.2.3.11.(1)**

---

**Objective**

OP3

**Attributions**

3.2.3.11.(1)(b) [F03-OP3.1]

**Intent(s)**

*Intent 1.* To exempt certain exposing building faces from the requirements of Sentences 3.2.3.1.(1) and 3.2.3.7.(1), 3.2.3.7.(2) and 3.2.3.7.(3), which would otherwise require a fire-resistance rating, on the basis that the building has a low fire load, the exposing building face is of noncombustible construction and the limiting distance is not less than 3 m. These conditions are to limit the probability of the spread of fire from the building to an adjacent building, which could lead to damage to adjacent buildings.

---

**Objective**

OP3

**Attributions**

3.2.3.11.(1)(a) [F04-OP3.1]

**Intent(s)**

*Intent 1.* To exempt certain exposing building faces from the requirements of Sentences 3.2.3.1.(1) and 3.2.3.7.(1), 3.2.3.7.(2) and 3.2.3.7.(3), which would otherwise require a fire-resistance rating, on the basis that the building has a low fire load, the exposing building face is of noncombustible construction and is not a loadbearing wall. These conditions are to limit the probability that the exposing building face will prematurely fail in a fire situation, which could lead to the collapse of the loadbearing exterior wall, which could lead to the spread of fire from the building to an adjacent building, which could lead to damage to adjacent buildings.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.3.12.(1)**

---

#### **Objective**

OP3

#### **Attributions**

[F03-OP3.1]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.3.1.(1) and permit an increase [doubling] in the area of unprotected openings, if certain conditions are met [openings glazed with certain types of assemblies].

This [the conditions] is to limit the probability of the spread of fire from the subject building to an adjacent building, which could lead to damage to the adjacent building.

*Intent 2.* To direct Code users to Article 3.1.8.14. and in Appendix Appendix D Division A for requirements pertaining to glass block and wired glass assemblies.

### **Provision: 3.2.3.13.(1)**

---

#### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.3.13.(4).

*Intent 2.* To supersede the requirements of Sentence 3.2.3.14.(1) and permit lesser distances between two unprotected openings in certain compartments, if certain conditions are met [one of the openings is protected in conformance with the requirements of Sentence 3.2.3.13.(4)].

### **Provision: 3.2.3.13.(2)**

---

#### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.2.3.13.(4).

### **Provision: 3.2.3.13.(3)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability of the spread of fire from the passageways to an adjacent building, which could lead to damage to adjacent buildings.

---

**Provision: 3.2.3.18.(2)**

---

**Objective**

OP3

**Attributions**

[F02-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that materials used for the construction of below-grade covered vehicular passageways will contribute to the growth and spread of fire, which could lead to the spread of fire from the passageways to an adjacent building, which could lead to damage to adjacent buildings.

---

**Provision: 3.2.3.19.(1)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability of the spread of fire from one building to the adjacent building connected by means of the walkway, which could lead to damage to the connected building.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.2.3.19.(2)**

#### **Objective**

OP3

#### **Attributions**

[F02-OP3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that materials used for the construction of the walkways will contribute to the growth and spread of fire, which could lead to the spread of fire from one building to the adjacent building connected by means of the walkway, which could lead to damage to the connected building.

---

### **Provision: 3.2.3.19.(3)**

#### **Objective**

OP3

#### **Attributions**

[F02, F12-OP3.1]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.3.19.(2) and permit combustible heavy timber construction if certain conditions are met [not less than 50% of the area of any enclosing perimeter walls is open to the outdoors, and the walkways are at ground level]. These conditions are to limit the probability that:

- fire will spread from one building to the adjacent building connected by means of the walkway, which could lead to damage to the connected building, and
- emergency responders will be delayed or ineffective in carrying out fire suppression operations, which could lead to the spread of fire from one building to the adjacent building connected by means of the walkway, which could lead to damage to the connected building.

---

### **Provision: 3.2.3.19.(4)**

#### **Intent(s)**

*Intent 1.* To exclude certain walkways from the application of Article 3.2.3.14. and Article 3.2.3.15., on the basis that such walkways do not pose a significant risk of exposure to adjacent buildings.

---

### **Provision: 3.2.3.19.(5)**

#### **Intent(s)**

*Intent 1.* To clarify the definition of aboveground walkways with regards to maximum width.

---

### **Provision: 3.2.3.20.(1)**

#### **Objective**

OP3

#### **Attributions**

[F01, F02-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that the use of underground walkways will create an undue fire hazard, which could lead to the start or spread of fire to a connected building, which could lead to damage to the connected building.

*Intent 2.* To limit the probability of the spread of fire from one building to the adjacent building connected by means of the walkway, which could lead to damage to the connected building.

**Provision: 3.2.3.20.(2)**

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.3.19.(1) and require an increased minimum fire-resistance rating of 1 h [as opposed to 45 min] for the separation of buildings connected by underground walkways, on the basis that underground walkways pose greater difficulties to emergency responders [e.g. result in delays and ineffectiveness in fire suppression operations]. This increased minimum fire-resistance rating is to limit the probability of the spread of fire from one building to the adjacent building connected by means of the walkway, which could lead to damage to the connected building.

**Provision: 3.2.3.20.(3)**

---

**Objective**

OP3

**Attributions**

[F02-OP3.1] Applies to portion of Code text: "An underground *walkway* shall be of *noncombustible construction ...*"

**Intent(s)**

*Intent 1.* To limit the probability that the material used to construct underground walkways will contribute to the growth and spread of fire, which could lead to the spread of fire from one building to the adjacent building connected by means of the walkway, which could lead to damage to the connected building.

---

**Objective**

OP2

**Attributions**

[F80-OP2.3] Applies to portion of Code text: "An underground *walkway* shall be ... suitable for an underground location."

**Intent(s)**

*Intent 1.* To limit the probability that material used to construct underground walkways will deteriorate and prematurely fail, which could lead to damage to the walkways.

---

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will not be promptly notified of a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.1.(5)**

#### **Intent(s)**

*Intent 1.* To exempt certain buildings from the application of Sentence 3.2.4.1.(4), which might otherwise require a fire alarm system, on the basis that the buildings are limited in size and the dwelling units have a direct means of evacuation to the exterior [persons should not be delayed in reaching a safe place].

---

### **Provision: 3.2.4.1.(6)**

#### **Intent(s)**

*Intent 1.* To exempt certain buildings from the application of Sentence 3.2.4.1.(4), which might otherwise require a fire alarm system, on the basis that the buildings are limited in size and the suites have a direct means of evacuation to the exterior [persons should not be delayed in reaching a safe place].

---

### **Provision: 3.2.4.1.(7)**

#### **Intent(s)**

*Intent 1.* To exempt open-air storage garages from the application of Sentence 3.2.4.1.(4), which might otherwise require a fire alarm system, on the basis that there are no other occupancies in the building [thus minimizing fire risks], construction is noncombustible and storeys are open air.

**Provision: 3.2.4.2.(1)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that persons on one side of a firewall will not be promptly notified of a fire situation involving the other side of the firewall, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.2.(2)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that different fire alarm systems will be used within a building, which could lead to confusion about the appropriate course of action to be taken in a fire emergency, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.2.(3)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that persons in one portion of a building will not be promptly notified of a fire situation involving another portion of the building, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.2.(4)**

---

**Objective**

OS1

**Attributions**

[F10-OS1.5] [F03-OS1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentences 3.2.4.1.(4), and 3.2.4.2.(2) and 3.2.4.2.(3), and permit a fire alarm system in [only] a portion of a building, if certain conditions are met.

These conditions are to limit the probability that:

- excessive travel distances will occur, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons,

---

## **Intent Statements: NBC 2010**

- the separations between the portions of the building will have insufficient fire resistance, which could lead to the spread of fire from one portion of the building to another portion of the building, which could lead to harm to persons in the other portion of the building, and
- fire and products of combustion will spread from one portion of the building to another portion of the building through openings in the separation between building portions, which could lead to harm to persons in the other portion of the building.

---

### **Provision: 3.2.4.2.(5)**

#### **Objective**

OS1

#### **Attributions**

[F11, F13-OS1.2]

#### **Intent(s)**

*Intent 1.* To exclude certain rooms from the application of Sentence 3.2.4.2.(4), which would otherwise allow these rooms to be considered as separate buildings for the purpose of fire alarm system design and installation.

This is to limit the probability that a fire will develop and grow undetected in an unoccupied service room or storage room, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

### **Provision: 3.2.4.2.(6)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons on one side of a vestibule or walkway will not be promptly notified of a fire situation involving the other side of the vestibule or walkway, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

#### **Intent(s)**

*Intent 1.* To exempt buildings interconnected by walkways or vestibules from the application of Sentence 3.2.4.2.(1), which would otherwise require only a single fire alarm system, if certain conditions are met.

---

### **Provision: 3.2.4.3.(1)**

#### **Objective**

OS1

#### **Attributions**

3.2.4.3.(1)(a) [F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that an inappropriate type of fire alarm system [e.g. 2stage system] will be used for an area liable to rapid fire or explosive conditions, which could lead to delays in the notification of persons of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

3.2.4.3.(1)(b) [F11-OS1.4] [F13-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that an inappropriate type of fire alarm system [e.g. singlestage system] will be used for an area where persons are unable to move by themselves, which could lead to:

- their unnecessary evacuation in response to a false or unwanted alarm, which could lead to harm to persons, and
- designated persons [staff] being unaware or misinformed as to the type of fire emergency, which could lead to inappropriate actions being taken, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

3.2.4.3.(1)(c), 3.2.4.3.(1)(d) [F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that an inappropriate type of fire alarm system, other than a single or 2-stage system, would be installed in a building, which could lead to inappropriate actions or delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To exempt certain Group B occupancies [in Clause 3.2.4.3.(1)(c)] from the application of Clause 3.2.4.3.(1)(b) which would otherwise require a 2stage fire alarm system.

---

**Provision: 3.2.4.4.(1)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not be promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

**Provision: 3.2.4.4.(2)**

---

**Objective**

OS1

**Attributions**

3.2.4.4.(2)(a) [F11-OS1.4] [F13-OS1.5]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability of:

- unnecessary evacuation in response to a false or unwanted alarm, which could lead to harm to persons, and
- inappropriate actions being taken by designated persons [staff], which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Objective**

OS1

### **Attributions**

3.2.4.4.(2)(b), 3.2.4.4.(2)(c) [F11-OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that persons will not be promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

## **Provision: 3.2.4.4.(3)**

---

### **Objective**

OS1

### **Attributions**

[F13-OS1.5]

### **Intent(s)**

*Intent 1.* To clarify that the operation of 2 stage fire alarm systems referred to in Sentence 3.2.4.4.(2) may be zone coded under certain conditions.

*Intent 2.* To limit the probability that a person in charge of fire safety and emergency response will be unable to ascertain the location of actuation of an alert signal without the need to respond to an annunciation panel and without delay, which could lead to directing evacuation of persons into a hazardous area, which could lead to harm to persons.

---

## **Provision: 3.2.4.4.(4)**

---

### **Objective**

OS1

### **Attributions**

[F13-OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that a person in charge of fire safety and emergency response will be confused concerning the zone in which an alert signal originated when more than one zone has initiated an alert signal, which could lead to directing the evacuation of persons into a hazardous area, which could lead to harm to persons.

**Provision: 3.2.4.5.(1)**

---

**Objective**

OS1

**Attributions**

[F11, F81-OS1.5] [F13, F12, F81-OS1.5, OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire alarm and voice communication systems will not operate properly in a fire situation, which could lead to persons and emergency responders not being promptly notified of the fire situation, which could lead to inappropriate action, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that fire alarm and voice communication systems will not operate properly in a fire situation, which could lead to emergency responders being unaware or misinformed, which could lead to delays or ineffectiveness in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

[F12, F11-OS3.7] Applies to voice communication systems.

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to communicate in an emergency situation, which could lead to delays or inefficiencies in carrying out emergency response operations, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will not be properly instructed in an emergency situation, which could lead to inappropriate action by such persons, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.5.(2)**

---

**Objective**

OS1

**Attributions**

[F82-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that fire alarm systems will not perform as originally intended in a fire situation, which could lead to persons not being promptly notified of the fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.4.6.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02, F81, F82-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that integrated life safety and fire protection systems will not meet proper standards, which could lead to such systems not performing in the way intended in a fire situation, which could lead to an inadequate water supply to fire suppression systems or a fire not being suppressed or controlled, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

*Intent 2.* To limit the probability that integrated life safety and fire protection systems will not perform as originally intended in a fire situation, which could lead to persons not being promptly notified of the fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F02, F81, F82-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that integrated life safety and fire protection systems will not meet proper standards, which could lead to such systems not performing in the way intended in a fire situation, which could lead to an inadequate water supply to fire suppression systems or a fire not being suppressed or controlled, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.2.4.7.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that alarm signals will be prematurely silenced in a fire situation, which could lead to persons misinterpreting whether or not a real fire situation exists, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

### **Provision: 3.2.4.7.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F81, F34-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that unauthorized persons will have access to the silencing switch, which could lead to the premature silencing of alarm signals in a fire situation, which could lead to persons misinterpreting whether or not a real fire situation exists, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

**Provision: 3.2.4.8.(1)**

---

**Objective**

OS1

**Attributions**

[F13-OS1.5, OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

*Intent 2.* To state the application of Sentence 3.2.4.8.(4) for requirements pertaining to the means of signalling fire departments.

---

**Objective**

OP1

**Attributions**

[F13-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

*Intent 2.* To state the application of Sentence 3.2.4.8.(4) for requirements pertaining to the means of signalling fire departments.

---

**Provision: 3.2.4.8.(2)**

---

**Objective**

OS1

**Attributions**

[F13-OS1.5, OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

*Intent 2.* To state the application of Sentence 3.2.4.8.(4) for requirements pertaining to the means of signalling fire departments.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP1

### **Attributions**

[F13-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

*Intent 2.* To state the application of Sentence 3.2.4.8.(4) for requirements pertaining to the means of signalling fire departments.

---

### **Provision: 3.2.4.8.(3)**

---

### **Objective**

OS1

### **Attributions**

[F13-OS1.5, OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

*Intent 2.* To state the application of Sentence 3.2.4.8.(4) for requirements pertaining to the means of signalling fire departments.

---

### **Objective**

OP1

### **Attributions**

[F13-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

*Intent 2.* To state the application of Sentence 3.2.4.8.(4) for requirements pertaining to the means of signalling fire departments.

---

### **Objective**

OS1

### **Attributions**

[F81, F13-OS1.5, OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire alarm signals will not be properly transmitted to the fire department in a fire situation, which could lead to emergency responders not being promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F81, F13-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire alarm signals will not be properly transmitted to the fire department in a fire situation, which could lead to emergency responders not being promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

**Provision: 3.2.4.8.(5)**

---

**Objective**

OS1

**Attributions**

[F13-OS1.5, OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not be familiar with procedures to notify the fire department or will be unaware of the emergency telephone number, which could lead to emergency responders not being promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

*Intent 2.* To alert building occupants to a method of notifying the fire department of the need to respond to an emergency in a building.

---

**Objective**

OP1

**Attributions**

[F13-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not be familiar with procedures to notify the fire department or will be unaware of the emergency telephone number, which could lead to emergency responders not being promptly notified of a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

*Intent 2.* To alert building occupants to a method of notifying the fire department of the need to respond to an emergency in a building.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.4.8.(6)**

---

#### **Objective**

OP1

#### **Attributions**

[F13-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be notified in a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

#### **Objective**

OS1

#### **Attributions**

[F13-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be notified in a fire situation, which could lead to delays in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to harm to persons.

### **Provision: 3.2.4.9.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.5, OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will be delayed in locating the annunciator, which could lead to delays in determining the zone of annunciation and the area of fire origin, which could lead to delays or ineffectiveness in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire, which could lead to harm to persons, including emergency responders.

*Intent 2.* To direct Code users to Sentence 3.2.5.5.(1) for requirements pertaining to access routes.

### **Provision: 3.2.4.9.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.5, OS1.2]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that emergency responders will be delayed in locating the area of fire origin, which could lead to delays or ineffectiveness in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

---

### **Provision: 3.2.4.9.(3)**

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.9.(1) and not require an annunciator, on the basis that the area of fire origin should be readily located.

---

### **Provision: 3.2.4.9.(4)**

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be aware of the status of the fire alarm system, which could lead to delays or ineffectiveness in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

---

### **Provision: 3.2.4.9.(5)**

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.9.(1) and not require an annunciator, on the basis that the [small] building can be considered as a single fire alarm zone and the area of fire origin should be readily located.

---

### **Provision: 3.2.4.9.(6)**

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Clause 3.2.4.9.(2)(a) and permit increased zone areas, on the basis that such areas can be considered as a single fire compartment or zone.

---

### **Provision: 3.2.4.9.(7)**

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.5, OS1.2]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that indicators required on annunciators or trouble signal devices will not be present on the main control unit, which could lead to delays or ineffectiveness in carrying out fire emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

---

### **Provision: 3.2.4.10.(1)**

#### **Objective**

OS1

#### **Attributions**

[F82-OS1.5, OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that deficiencies in fire alarm systems will go unnoticed, which could lead to improper operation of the systems in a fire situation, which could lead to persons not being properly notified, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that deficiencies in fire alarm systems will go unnoticed, which could lead to improper operation of the systems in a fire situation, which could lead to emergency responders not being properly notified, which could lead to delays in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

---

### **Provision: 3.2.4.10.(2)**

#### **Objective**

OS1

#### **Attributions**

[F82-OS1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require electrical supervision of valves controlling water supplies in a standpipe system, to limit the probability that the closing of valves that are intended to be normally open, or the opening of valves that are intended to be normally closed, will go unnoticed, which could lead to an inadequate water supply to the standpipe system in a fire situation, which could lead to the fire not being suppressed or controlled, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F82-OP1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require electrical supervision of valves controlling water supplies in a standpipe system, to limit the probability that the closing of valves that are intended to be normally open, or the opening of valves that are intended to be normally closed, will go unnoticed, which could lead to an inadequate water supply to the standpipe system in a fire situation, which could lead to the fire not being suppressed or controlled, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will not be detected in certain spaces, which could lead to persons not being promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.11.(3)**

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2] [F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.11.(2), which would otherwise require fire detectors to be installed in certain spaces, if the floor area is sprinklered.

---

### **Provision: 3.2.4.11.(4)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will not be detected in the elevator hoistways and dumbwaiter shafts, which could lead to persons not being promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To clarify the requirements of Sentence 3.2.4.11.(2), in regards to the detection of fire in the elevator hoistways and dumbwaiter shafts where a sprinkler system is not installed within the hoistway or shaft.

---

### **Provision: 3.2.4.12.(1)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that smoke will not be promptly detected in spaces where the presence of smoke or fire could be critically detrimental to the safety of persons, which could lead to persons not being notified of a fire situation in such spaces, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.12.(2)**

#### **Intent(s)**

*Intent 1.* To exempt certain suites of care occupancy from the requirements of Clause 3.2.4.12.(1)(a), which would otherwise require the installation of smoke detectors in sleeping rooms, on the basis that smoke alarms are installed in such suites.

---

### **Provision: 3.2.4.12.(3)**

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that staff serving sleeping rooms in Group B occupancies will not be able to easily identify the room or location of fire alarm initiation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.12.(4)**

#### **Objective**

OS1

#### **Attributions**

[F10-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that the elevator functionality will be affected if the elevator machine room is involved in a fire, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons in the elevators.

---

### **Provision: 3.2.4.12.(5)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke will not be promptly detected in spaces where the presence of smoke or fire could be critically detrimental to the safety of persons, which could lead to persons not being notified of a fire situation in such spaces, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.12.(6)**

---

**Intent(s)**

*Intent 1.* To clarify that smoke detectors installed at the entrance to the walkways in conformance with Article 3.1.8.12. have met the requirements of Sentence 3.2.4.12.(5) to avoid duplicate installation of smoke detectors in those locations.

**Provision: 3.2.4.12.(7)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.4, OS1.5]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.12.(5), and allow the installation of fire detectors instead of smoke detectors when certain conditions are met.

This is to limit the probability of:

- unnecessary evacuation in response to a false or unwanted alarm, which could lead to harm to persons, and
- inappropriate actions being taken by designated persons [staff], which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.13.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability of the spread of smoke between storeys, suites or fire compartments by means of an air handling system, which could lead to harm to persons.

*Intent 2.* To limit the probability that smoke originating from a fire in an air handling system will spread through the duct system, which could lead to harm to persons.

**Provision: 3.2.4.14.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability of the spread of smoke between storeys, suites or fire compartments by means of an air handling system, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.4.15.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F10-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that elevators will be recalled to a floor level involved in a fire, which could lead to harm to persons in the elevators.

### **Provision: 3.2.4.15.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will not be promptly notified of a fire involving the elevator recall level, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

### **Provision: 3.2.4.15.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.15.(1) and not require the alternate floor recall feature if the floor area containing the recall level is sprinklered throughout.

This is to limit the probability that a fire involving the recall level will not be suppressed or controlled, which could lead to harm to persons in the elevators when the elevators are recalled to this level.

### **Provision: 3.2.4.16.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5] [F12-OS1.5, OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that operation of the sprinkler system will not sound alarm signals, which could lead to persons not being promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

*Intent 2.* To limit the probability that emergency responders will not be able to locate the area of fire origin, which could lead to delays or inefficiencies in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F12-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to locate the area of fire origin, which could lead to delays or inefficiencies in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

### **Provision: 3.2.4.16.(2)**

---

### **Objective**

OS1

### **Attributions**

[F11-OS1.5] [F13-OS1.5, OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that operation of the sprinkler system will not sound alarm or alert signals, which could lead to persons not being promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that emergency responders will not be promptly notified of a fire situation, which could lead to delays or inefficiencies in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to locate the area of fire origin, which could lead to delays or inefficiencies in carrying out fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F12-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to locate the area of fire origin, which could lead to delays or inefficiencies in carrying out fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

### **Provision: 3.2.4.17.(1)**

---

### **Objective**

OS1

### **Attributions**

[F11-OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability of delays in the manual activation of the fire alarm system by a person who is aware of a fire, which could lead to other persons not being promptly notified of a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.17.(2)**

---

### **Objective**

OS1

### **Attributions**

[F02-OS1.2] [F12-OS1.2, OS1.5] [F10-OS1.5]

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.17.(1) and exempt certain occupancies and locations from the need to have manual stations, if certain conditions are met.

These conditions are to limit the probability that:

- a fire will not be suppressed or controlled, which could lead to the spread of fire,
- emergency responders will be delayed in carrying out fire emergency response operations, which could lead to:
  - delays in evacuation or moving to a safe place, and
  - the spread of fire, and
- persons will be delayed in evacuation or moving to a safe place in a fire situation.

This is to limit the probability of harm to persons.

**Provision: 3.2.4.17.(3)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2] [F12-OS1.2, OS1.5] [F10-OS1.5]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.17.(1) and exempt certain occupancies and locations from the need to have manual stations, if certain conditions are met.

These conditions are to limit the probability that:

- a fire will not be suppressed or controlled, which could lead to the spread of fire,
- emergency responders will be delayed in carrying out fire emergency response operations, which could lead to:
  - delays in evacuation or moving to a safe place, and
  - the spread of fire, and
- persons will be delayed in evacuation or moving to a safe place in a fire situation.

This is to limit the probability of harm to persons.

**Provision: 3.2.4.17.(4)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability of delays in the manual activation of the fire alarm system by a person who is aware of a fire, which could lead to other persons not being promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.17.(5)**

---

**Objective**

OS1

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability of delays in the manual activation of the fire alarm system by a person who is aware of a fire, which could lead to other persons not being promptly notified of a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.18.(1)**

---

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To clarify that the same audible signal devices are permitted to be used to sound the alert signals and the alarm signals.

---

### **Provision: 3.2.4.18.(2)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability of delays in sounding the alert or alarm signals, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.18.(3)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that the integrity of fire alarm systems will be compromised, which could lead to improper operation of the fire alarm systems in a fire situation, which could lead to persons not being properly notified of the fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.19.(1)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons in some areas of buildings will not be able to hear alert signals in a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.19.(2)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will not recognize alarm signals, which could lead to inappropriate action being taken in a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.19.(3)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not recognize the various types of fire alarm signals, which could lead to inappropriate action being taken in a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.19.(4)**

---

**Objective**

OS3

**Attributions**

[F33-OS3.5]

**Intent(s)**

*Intent 1.* To limit the probability that audible signal devices will be excessively loud, which could lead to harm to persons [e.g. damage the hearing of persons].

**Provision: 3.2.4.19.(5)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that a person in a residential or care occupancy sleeping room will not be promptly notified of a fire situation and awakened from sleep, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.19.(6)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not hear or distinguish fire alarm signals from ambient noises and will not be promptly notified of a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.4.19.(7)**

---

#### **Objective**

OS1

#### **Attributions**

[F11, F81-OS1.5]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.7.(2) and permit manual silencing switches outside the fire alarm control unit, where silenced audible signal devices automatically restore to normal operation after 10 min.

This is to limit the probability that audible signal devices will:

- be inadvertently or purposely silenced [made inoperative or damaged] as a result of false alarms, and
- not be restored to normal operation after being silenced.

This is to limit the probability of the signal devices not operating in a fire situation, which could lead to persons not being promptly notified, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.2.4.19.(8)**

---

#### **Objective**

OS1

#### **Attributions**

[F11, F81-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that disconnected (open circuit) audible signal devices will interfere with the ability of devices in other specified areas, public corridors or suites to sound an alarm, which could lead to persons in areas outside the dwelling unit or suite not being promptly notified of a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.2.4.19.(9)**

---

#### **Objective**

OS1

#### **Attributions**

[F11, F81-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that disconnected or damaged audible signal devices on one floor will interfere with the ability of devices on other floors to operate, which could lead to persons not being promptly notified of a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that disconnected or damaged audible signal devices within specified areas will interfere with the operation of devices outside these areas (or vice-versa), which could lead to persons not being promptly notified of a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.19.(10)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that persons located in service spaces will not be promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.19.(11)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.19.(7), which would otherwise require a means for manual silencing, if certain conditions are met.

**Provision: 3.2.4.19.(12)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that audible signal devices will not function under a second stage alarm, which could lead to the signal devices not operating in a fire situation, which could lead to persons not being promptly notified, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.2.4.20.(1)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that persons with hearing impairment will not be promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to these persons [Clause (a) and (d)]

*Intent 2.* To limit the probability that persons will not hear or distinguish fire alarm signals from ambient noises and will not be promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons [Clauses (b) and(c)]

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.4.20.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons relying on visual information to warn them of an emergency situation will not be promptly notified of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

### **Provision: 3.2.4.21.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F81, F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke alarms will not meet proper standards, which could lead to such devices not performing in the way intended in a fire situation, which could lead to persons not being properly notified of the fire, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that a fire will not be detected in dwelling units, suites in a care occupancy or sleeping rooms, which could lead to persons in such rooms not being promptly notified of the fire, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

### **Provision: 3.2.4.21.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire involving a storey or suite will not be detected, which could lead to persons on that storey or suite or another storey or suite not being promptly notified of the fire, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

### **Provision: 3.2.4.21.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that persons in sleeping rooms will not be promptly notified of a fire in other parts of the dwelling unit or within their room, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that a fire involving a floor level will not be detected, which could lead to persons on that floor level or on another floor level not being promptly notified of the fire, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.21.(4)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To exempt certain care occupancies from the application of Sentence 3.2.4.21.(1), which would otherwise not require smoke alarms within sleeping rooms, when the care occupancy has individual suites for residents. This is to limit the probability that residents in an individual suite will not be promptly notified of a fire in other parts of the care occupancy, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.21.(5)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire will not be quickly detected, which could lead to persons not being promptly notified of the fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.21.(6)**

#### **Objective**

OS1

#### **Attributions**

[F11, F81-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that electrical connections and circuits for smoke alarms will be disconnected, which could lead to the smoke alarms not operating in a fire situation, which could lead to persons not being promptly notified of the fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.4.21.(7)**

---

#### **Objective**

OS1

#### **Attributions**

[F11, F81-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke detectors will not meet proper standards, which could lead to such devices not performing in the way intended in a fire situation, which could lead to persons not being properly notified of the fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that a fire will not be detected in suites of residential occupancy, which could lead to persons in such rooms not being promptly notified of the fire, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

#### **Intent(s)**

*Intent 1.* To exempt suites of residential occupancy from the requirements of Sentences 3.2.4.21.(1) and 3.2.4.21.(6), on the basis that smoke detectors installed in accordance with CAN/ULC-S524 and connected to the fire alarm system are deemed to provide an equivalent level of performance to that of smoke alarms.

---

### **Provision: 3.2.4.21.(8)**

---

#### **Intent(s)**

*Intent 1.* To exempt smoke detectors in certain areas from the full installation requirements stipulated within the referenced standard and allow the smoke detectors to function as per the requirements of smoke alarms under this application.

---

### **Provision: 3.2.4.21.(9)**

---

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons in one part of the dwelling unit will not be promptly notified of a fire in another part of the dwelling unit, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.21.(10)**

---

#### **Objective**

OS1

#### **Attributions**

[F81, F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke alarms will not meet proper standards, which could lead to such devices not performing in the way intended in a fire situation, which could lead to persons not being promptly notified of the fire, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

**Provision: 3.2.4.21.(11)**

---

**Objective**

OS1

**Attributions**

[F11, F81-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that smoke alarms will:

- be inadvertently or purposely silenced [made inoperative or damaged] as a result of false alarms, which could lead to the signal devices not operating in a fire situation, which could lead to persons not being promptly notified of the fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- not be restored to normal operation after being silenced, which could lead to the signal devices not operating in a fire situation, which could lead to persons not being notified of the fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

**Provision: 3.2.4.21.(12)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.21.(11) and not require the manually operated silencing device within the circuitry on the basis of the difficulties in achieving this for smoke detectors installed in conformance with CAN/ULC-S524.

---

**Provision: 3.2.4.21.(13)**

---

**Objective**

OS1

**Attributions**

[F11-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not recognize fire alarm signals, which could lead to inappropriate action being taken in a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.2.4.22.(1)**

---

**Objective**

OS3

**Attributions**

[F12, F11-OS3.7]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to communicate in an emergency situation, which could lead to delays or inefficiencies in carrying out emergency response operations, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will not be properly instructed in an emergency situation, which could lead to inappropriate action by such persons, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.22.(2)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that persons will either:

- not be properly instructed, or
- not hear or distinguish the voice message over ambient noises,

which could lead to inappropriate action by such persons, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.22.(3)**

#### **Objective**

OS1

#### **Attributions**

[F11-OS1.5]

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.7.(2) and permit manual [alarm and alert] silencing switches outside the fire alarm control unit, if silencing can only be done after the alarm signal has sounded initially for not less than 60 s.

This [the silencing provision] is to limit the probability that voice messages will not be heard or understood, which could lead to persons not being instructed in a fire situation, which could lead to inappropriate action by such persons, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

This [the alarm signal sounding for not less than 60 s] is to limit the probability that persons will not be aware of a fire situation, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.4.22.(4)**

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.4.7.(2) and permit manual [alarm and alert] silencing switches outside the fire alarm control unit, if silencing can only be done after the alert signal has sounded initially for not less than a certain period of time.

This [the silencing provision] is to limit the probability that voice messages will not be heard or understood, which could lead to persons not being instructed in a fire situation, which could lead to inappropriate action by such persons, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

This [the alert signal sounding for not less than a certain period of time] is to limit the probability that designated persons [staff] will be unaware or misinformed of a fire situation, which could lead to:

- unnecessary evacuation in response to a false or unwanted alarm, which could lead to harm to persons, and
- inappropriate actions being taken by designated persons [staff], which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that firefighting operations will be ineffective, which could lead to a fire not being suppressed or controlled, which could lead to the spread of fire to adjacent buildings, which could lead to damage to the building.

### **Provision: 3.2.5.8.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that manual firefighting operations will be delayed or ineffective, which could lead to a fire not being suppressed or controlled, which could lead to the spread of fire, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F02-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that manual firefighting operations will be delayed or ineffective, which could lead to a fire not being suppressed or controlled, which could lead to the spread of fire, which could lead to damage to the building.

### **Provision: 3.2.5.9.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that standpipe systems will not meet proper standards, which could lead to a fire not being suppressed or controlled, which could lead to the spread of fire, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F02-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that standpipe systems will not meet proper standards, which could lead to a fire not being suppressed or controlled, which could lead to the spread of fire, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.5.9.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.5.9.(1) and preclude dry standpipes on the basis that water would not be readily available to fight a fire in a building that has a dry standpipe system not connected to a water supply. This is to limit the probability that manual firefighting operations will be delayed, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F12-OP1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.5.9.(1) and preclude dry standpipes on the basis that water would not be readily available to fight a fire in a building that has a dry standpipe system not connected to a water supply. This is to limit the probability that manual firefighting operations will be delayed, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.2.5.9.(3)**

---

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.5.9.(1) and permit a different water supply flow rate than that of the referenced standard, on the basis that the specified flow rate is considered adequate, taking into consideration that the National Building Code of Canada has other provisions not covered by the referenced standard.

### **Provision: 3.2.5.9.(4)**

---

#### **Intent(s)**

*Intent 1.* To exempt open-air storage garages from the application of Sentence 3.2.5.8.(1), which might otherwise require a standpipe system, on the basis that there are no other occupancies in the building [thus minimizing fire risks], construction is noncombustible and storeys are open air.

### **Provision: 3.2.5.9.(5)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To exempt a standpipe system from the pressure requirements of the standard referenced in Sentence 3.2.5.9.(1) with respect to the need to install a fire pump in a fully sprinklered building solely to develop the pressure requirements of the standpipe system, if there is sufficient water pressure and quantity from the municipal water connection to satisfy the sprinkler system demand. This is to limit the probability that a fire will not be suppressed or controlled, which could lead to the spread of fire, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

*Intent 1.* To exempt a standpipe system from the pressure requirements of the standard referenced in Sentence 3.2.5.9.(1) with respect to the need to install a fire pump in a fully sprinklered building solely to develop the pressure requirements of the standpipe system, if there is sufficient water pressure and quantity from the municipal water connection to satisfy the sprinkler system demand. This is to limit the probability that a fire will not be suppressed or controlled, which could lead to the spread of fire, which could lead to damage to the building.

---

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2] [F05, F06-OS1.5, OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one storey to another through doors propped open in the exit stair shaft by fire hoses, which could lead to harm to persons.

*Intent 2.* To limit the probability that fire will spread from one storey to the exit stair shaft through doors propped open in the exit stair shaft by fire hoses, which could lead to:

- harm to persons, including emergency responders, and
- emergency response operations being delayed or ineffective, which could lead to:
  - delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
  - the spread of fire, which could lead to harm to persons, including emergency responders.

*Intent 3.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require a different location for hose connections.

---

#### **Objective**

OP1

#### **Attributions**

[F03, F06-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one storey to another through doors propped open in the exit stair shaft by fire hoses, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread from one storey to the exit stair shaft through doors propped open in the exit stair shaft by fire hoses, which could lead to emergency response operations being delayed or ineffective, which could lead to the spread of fire, which could lead to damage to the building.

*Intent 3.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require a different location for hose connections.

### **Provision: 3.2.5.10.(2)**

---

#### **Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and not require hose connections within a floor area, on the basis that Sentence 3.2.5.10.(1) requires the hose stations to be located in exits.

### **Provision: 3.2.5.10.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require sufficient clearance around hose connections, to limit the probability that fire emergency response operations will be delayed, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require sufficient clearance around hose connections, to limit the probability that fire emergency response operations will be delayed, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

**Provision: 3.2.5.10.(4)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require 64 mm diam hose connections to be installed in standpipe systems, to limit the probability that the water supply to floor areas for firefighting will be inadequate, which could lead to fire emergency response operations being ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

**Provision: 3.2.5.10.(5)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentences 3.2.5.9.(1) and 3.2.5.10.(4) and not require hose connections for 64 mm diam hose in buildings that are limited in height [and

---

## **Intent Statements: NBC 2010**

not sprinklered], on the basis that the water supply for such smaller buildings is considered adequate with the provision of 38 mm hose stations [see Sentence 3.2.5.11.(1)].

### **Provision: 3.2.5.11.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require hose stations for 38 mm diam hose in buildings that are not sprinklered, to limit the probability that the water supply to floor areas for firefighting will be inadequate, which could lead to fire emergency response operations being ineffective, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F02-OP1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require hose stations for 38 mm diam hose in buildings that are not sprinklered, to limit the probability that the water supply to floor areas for firefighting will be inadequate, which could lead to fire emergency response operations being ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.2.5.11.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require hose stations for 38 mm diam hose in floor areas that are not sprinklered.

This is to limit the probability that the water supply to floor areas for firefighting will be inadequate, which could lead to fire emergency response operations being ineffective, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F02-OP1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require hose stations for 38 mm diam hose in floor areas that are not sprinklered.

This is to limit the probability that the water supply to floor areas for firefighting will be inadequate, which could lead to fire emergency response operations being ineffective, which could lead to the spread of fire to other parts of the building or facility, which could lead to damage to the building or facility.

---

**Provision: 3.2.5.11.(3)**

---

**Objective**

OS1

**Attributions**

[F02, F12-OS1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require hose stations [for 38 mm diam hose] in certain locations in floor areas, to limit the probability of delays in accessing the water supply to floor areas for firefighting, which could lead to fire emergency response operations being delayed, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02, F12-OP1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of the standard referenced in Sentence 3.2.5.9.(1) and require hose stations [for 38 mm diam hose] in certain locations in floor areas, to limit the probability of delays in accessing the water supply to floor areas for firefighting, which could lead to fire emergency response operations being delayed, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

[F02-OS1.2]

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.2.5.9.(1), which would otherwise require that stand-pipe and hose stations conform to certain design and installation standards [which would require supply from risers], and permit small hose stations to be supplied from interior sprinkler piping, if certain conditions are met [the building is sprinklered in conformance with Article 3.2.5.12.].

This is to limit the probability that fire suppression operations using small hose stations will be ineffective in controlling or suppressing a fire, which could lead to the spread of fire, which could lead to harm to persons.

**Intent(s)**

*Intent 1.* To limit the probability of migration of contaminated air from a building to another during a fire, which could lead to exposure to smoke, which could lead to:

- delays or inefficiencies in fire suppression operations, which could lead to the spread of fire, which could lead to harm to persons, including emergency responders, and
- delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability of migration of contaminated air from a building to another during a fire, which could lead to exposure to smoke, which could lead to delays or inefficiencies in fire suppression operations, which could lead to the spread of fire, which could lead to damage to the building.

---

**Objective**

OP3

**Attributions**

[F03-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability of migration of contaminated air from a building to another during a fire, which could lead to exposure to smoke, which could lead to delays or inefficiencies in fire suppression operations, which could lead to the spread of fire, which could lead to damage to adjacent buildings.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.6.4.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to readily use elevators in a fire situation, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

#### **Objective**

OP1

#### **Attributions**

[F12-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to readily use elevators in a fire situation, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.2.6.4.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to readily locate and use the key-operated switches for emergency recall of elevators in a fire situation, which could lead to delays in the recall of elevators, which could lead to delays in the use of elevators by emergency responders, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

#### **Objective**

OP1

#### **Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to readily locate and use the key-operated switches for emergency recall of elevators in a fire situation, which could lead to delays in the recall of elevators, which could lead to delays in the use of elevators by emergency responders, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

**Provision: 3.2.6.4.(3)**

---

**Objective**

OS1

**Attributions**

[F12-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to control the operation of elevators in a fire situation, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to control the operation of elevators in a fire situation, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

**Provision: 3.2.6.4.(4)**

---

**Objective**

OS1

**Attributions**

[F12-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to readily locate and use the keys in a fire situation, which could lead to:

- delays in the recall of elevators, which could lead to delays in the use of elevators by emergency responders, and
- emergency responders not being able to control the operation of elevators in a fire situation.

This is to limit the probability of delays or inefficiencies in fire emergency response operations, which could lead to:

---

## **Intent Statements: NBC 2010**

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

### **Objective**

OP1

### **Attributions**

[F12-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to readily locate and use the keys in a fire situation, which could lead to:

- delays in the recall of elevators, which could lead to delays in the use of elevators by emergency responders, and
- emergency responders not being able to control the operation of elevators in a fire situation.

This is to limit the probability of delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

## **Provision: 3.2.6.5.(1)**

---

### **Objective**

OS1

### **Attributions**

[F12, F06-OS1.2, OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that an elevator suitable for use by firefighters will not be available during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

*Intent 2.* To state the application of Sentences 3.2.6.5.(2) to 3.2.6.5.(6) for requirements regarding firefighters' elevators.

---

### **Objective**

OP1

### **Attributions**

[F12, F06-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that an elevator suitable for use by firefighters will not be available during the time required for emergency responders to perform their duties, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

*Intent 2.* To state the application of Sentences 3.2.6.5.(2) to 3.2.6.5.(6) for requirements regarding firefighters' elevators.

**Provision: 3.2.6.5.(2)**

---

**Objective**

OS1

**Attributions**

[F12-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that an elevator will not be suitable, in regards to size, capacity or speed, for use by firefighters, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that an elevator will not be suitable, in regards to size, capacity or speed, for use by firefighters, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

**Provision: 3.2.6.5.(3)**

---

**Objective**

OS1

**Attributions**

[F06-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability of direct exposure of the elevator door interlock mechanism to fire, which could lead to the failure of the interlock mechanism and the opening or partial opening of the elevator doors during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to:

- harm to persons, including emergency responders, and
- the failure of the elevator operating mechanism, which could lead to the elevators not operating as intended, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:
  - delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and

---

## **Intent Statements: NBC 2010**

- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

### **Objective**

OP1

### **Attributions**

[F06-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability of direct exposure of the elevator door interlock mechanism to fire, which could lead to the failure of the interlock mechanism and the opening or partial opening of the elevator doors during the time required for emergency responders to perform their duties, which could lead to the failure of the elevator operating mechanism, which could lead to the elevators not operating as intended, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

## **Provision: 3.2.6.5.(4)**

---

### **Objective**

OS1

### **Attributions**

[F12-OS1.2, OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that an elevator for use by firefighters will not have access to all floor levels, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

### **Objective**

OP1

### **Attributions**

[F12-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that an elevator for use by firefighters will not have access to all floor levels, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

## **Provision: 3.2.6.5.(5)**

---

### **Objective**

OS1

### **Attributions**

[F12-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability of delays or inefficiencies in fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

*Intent 2.* To exempt from the application of Sentence 3.2.6.5.(4) elevators where it is necessary to change elevators to reach any floor referred to in Sentence 3.2.6.5.(4).

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability of delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

*Intent 2.* To exempt from the application of Sentence 3.2.6.5.(4) elevators where it is necessary to change elevators to reach any floor referred to in Sentence 3.2.6.5.(4).

---

**Provision: 3.2.6.5.(6)**

---

**Objective**

OS1

**Attributions**

[F06-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that the elevator electrical conductors will be damaged or prematurely fail on exposure to fire, which could lead to the elevators not properly operating during the time required to achieve occupant safety and for emergency responders to perform their duties, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

**Objective**

OP1

**Attributions**

[F06-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that the elevator electrical conductors will be damaged or prematurely fail on exposure to fire, which could lead to the elevators not properly operating during the time required for emergency responders to perform their duties, which could lead to delays or inefficiencies in fire

---

## **Intent Statements: NBC 2010**

emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.2.6.6.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F06-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke will build up on floor areas in a fire situation, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- the spread of fire, which could lead to harm to persons, including emergency responders, and
- delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F06-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke will build up on floor areas in a fire situation, which could lead to:

- delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building, and
- damage to the building.

### **Provision: 3.2.6.6.(2)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To exempt fixed glass windows from the application of Sentence 3.2.6.6.(1).

This is to limit the probability that the breaking of the windows [by firefighters to vent the floor areas] will endanger pedestrians below, which could lead to harm to persons.

### **Provision: 3.2.6.6.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability of excessive delays in locating vent windows in a fire situation, which could lead to delays in the opening of the windows, which could lead to the buildup of smoke on floor areas, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- the spread of fire, which could lead to harm to persons, including emergency responders, and
- delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To clarify that windows used for venting are to be of the openable type, on the basis that if fixed windows were permitted, their breakage [by firefighters for venting purposes] could endanger persons below.

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability of excessive delays in locating vent windows in a fire situation, which could lead to delays in the opening of the windows, which could lead to the buildup of smoke on floor areas, which could lead to:

- delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building, and
- damage to the building.

*Intent 2.* To clarify that windows used for venting are to be of the openable type, on the basis that if fixed windows were permitted, their breakage [by firefighters for venting purposes] could endanger persons below.

---

**Provision: 3.2.6.6.(4)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2] [F12-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To exempt elevator hoistways from the application of Sentence 3.2.6.6.(1).

This is to limit the probability that the use of elevator hoistways for venting floor areas will lead to exposure of persons in the elevator cars to smoke, or the spread of smoke to other parts of the building, which could lead to:

- harm to persons, including emergency responders, in elevator cars, and
- delays or inefficiencies in fire emergency response operations, which could lead to:
  - delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
  - the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.2.6.7.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to readily locate and use the central alarm and control facility, which could lead to delays or ineffectiveness of fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders.

---

#### **Objective**

OP1

#### **Attributions**

[F12-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to readily locate and use the central alarm and control facility, which could lead to delays or ineffectiveness of fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.2.6.7.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.2, OS1.5] [F11-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will be delayed in assessing the status of a building during a fire situation, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to:

- delays in evacuation or moving to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

*Intent 2.* To limit the probability that emergency responders will be delayed or ineffective in controlling emergency equipment and systems, which could lead to:

- delays or inefficiencies in fire suppression operations, which could lead to the spread of fire, which could lead to harm to persons, including emergency responders, and
- delays in evacuation or moving to a safe place, which could lead to harm to persons

*Intent 3.* To limit the probability that persons will not be properly instructed in a fire situation, which could lead to inappropriate action by such persons, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 4.* To direct Code users to Articles 3.2.4.8. and 3.2.4.9., and Sentences 3.2.4.22.(3) and 3.2.4.22.(4).

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will be delayed in assessing the status of a building during a fire situation, which could lead to delays or inefficiencies in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that emergency responders will be delayed or ineffective in controlling emergency equipment and systems, which could lead to delays or inefficiencies in fire suppression operations, which could lead to the spread of fire, which could lead to damage to the building.

*Intent 3.* To direct Code users to Articles 3.2.4.8. and 3.2.4.9., and Sentences 3.2.4.22.(3) and 3.2.4.22.(4).

**Provision: 3.2.6.8.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Article 3.2.4.22.

---

**Objective**

OS3

**Attributions**

[F12, F11-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be able to communicate in an emergency situation, which could lead to delays or inefficiencies in carrying out emergency response operations, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will not be properly instructed in an emergency situation, which could lead to inappropriate action by such persons, which could lead to delays in evacuation or moving to a safe place, which could lead to harm to persons.

**Provision: 3.2.6.9.(1)**

---

**Objective**

OS1

**Attributions**

[F82-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that deficiencies in systems for control of smoke movement and mechanical venting will go unnoticed, which could lead to such systems not operating as originally intended in a fire situation, which could lead to the buildup of smoke on floor areas or in exit stair shafts, which could lead to:

- delays or inefficiencies in emergency suppression operations, which could lead to the spread of fire, which could lead to harm to persons, including emergency responders, and

---

## **Intent Statements: NBC 2010**

- delays in evacuation or moving to a safe place, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F82-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that deficiencies in systems for control of smoke movement and mechanical venting will go unnoticed, which could lead to such systems not operating as originally intended in a fire situation, which could lead to the buildup of smoke on floor areas or in exit stair shafts, which could lead to:

- delays or inefficiencies in emergency suppression operations, which could lead to the spread of fire, which could lead to damage to the building, and
- damage to the building.

---

### **Provision: 3.2.7.1.(1)**

---

### **Objective**

OS3

### **Attributions**

[F30-OS3.1] [F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that egress routes and exits will have inadequate illumination, which could lead to safety hazards [bumping, tripping, falling, etc.], which could lead to harm to persons.

*Intent 2.* To limit the probability that egress routes and exits will have inadequate illumination, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.7.1.(2)**

---

### **Objective**

OS3

### **Attributions**

[F30-OS3.1] [F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that egress routes and exits will have inadequate illumination, which could lead to safety hazards [bumping, tripping, falling, etc.], which could lead to harm to persons.

*Intent 2.* To limit the probability that egress routes and exits will have inadequate illumination in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.2.7.1.(3)**

---

### **Intent(s)**

*Intent 1.* To expand the application of Article 9.34.2.7.

**Provision: 3.2.7.1.(4)**

---

**Intent(s)**

*Intent 1.* To expand the application of Subsection 9.34.2.

**Provision: 3.2.7.2.(1)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.1, OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that heat from recessed lighting fixtures will build up and ignite combustible insulation or other nearby combustible materials, which could lead to the start and spread of fire, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F01-OP1.1, OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that heat from recessed lighting fixtures will build up and ignite combustible insulation or other nearby combustible materials, which could lead to the start and spread of fire, which could lead to damage to the building.

**Provision: 3.2.7.5.(1)****Objective**

OS1

**Attributions**

[F81, F06, F11, F02, F03, F10, F12-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that emergency electrical power systems will not meet proper standards, which could lead to emergency electrical power systems not performing as intended when there is a loss of normal power in a fire situation, which could lead to the inability of the emergency electrical power systems to supply fire protection systems, which could lead to the inability of:

- fire alarm or voice communication systems to promptly notify persons in the building, which could lead to delays in the evacuation or movement of persons to a safe place,
- sprinkler, standpipe and hose systems, and other fire suppression systems [that rely on booster or fire pumps, or electrical power] to control or suppress a fire, which could lead to the spread of fire,
- emergency lighting systems to illuminate egress routes, which could lead to delays in the evacuation or movement of persons to a safe place,
- smoke management systems to control smoke conditions as originally intended, which could lead to delays in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, and
- elevator systems to be used in emergency response operations, which could lead to delays in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place.

This is to limit the probability of harm to persons, including emergency responders.

OP1

### **Attributions**

[F81, F06, F02, F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that emergency electrical power systems will not meet proper standards, which could lead to emergency electrical power systems not performing as intended when there is a loss of normal power in a fire situation, which could lead to the inability of the emergency electrical power systems to supply fire protection systems, which could lead to the inability of:

- sprinkler, standpipe and hose systems, and other fire suppression systems [that rely on booster or fire pumps, or electrical power] to control or suppress a fire, which could lead to the spread of fire, and
- smoke management systems to control smoke conditions as originally intended, which could lead to the migration of smoke from one floor area or fire compartment to other parts of the building.

This is to limit the probability of damage to the building.

---

### **Objective**

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that, during a failure of the normal power supply in a fire emergency situation, emergency generator power supplies to certain building services will not be capable of performing their intended functions for a length of time sufficient for emergency responders to carry out their duties, which could lead to:

- the inability of elevator systems to be used in emergency response operations, which could lead to delays in emergency response operations,
- firefighting operations being ineffective, which could lead to the fire not being controlled or suppressed, and
- the inability of smoke management systems to control smoke conditions, which could lead to delays in emergency response operations.

This is to limit the probability of the spread of fire, which could lead to damage to the building.

---

### **Objective**

OP3

### **Attributions**

3.2.7.9.(1)(b) [F02-OP3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that, during a failure of the normal power supply in a fire emergency situation, emergency generator power supplies to electrical power systems supplying water for firefighting will not be capable of performing their intended functions for a length of time sufficient for emergency responders to carry out their duties, which could lead to firefighting operations being ineffective, which could lead to the fire not being controlled or suppressed, which could lead to the spread of fire to an adjacent building, which could lead to damage to adjacent buildings.

---

### **Objective**

OS3

### **Attributions**

3.2.7.9.(1)(a) [F36-OS3.6] [F12, F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that, during a failure of the normal power supply, persons will be trapped in an elevator, which could lead to harm to persons.

*Intent 2.* To limit the probability that, during a failure of the normal power supply in an emergency situation, emergency generator power supplies to elevators will not be capable of performing their intended functions for a length of time sufficient for emergency responders to carry out their duties, or for persons to evacuate or move to a safe place, which could lead to the inability of elevator systems to be used in emergency response operations, which could lead to delays in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders.

---

## **Provision: 3.2.7.9.(2)**

---

### **Objective**

OS1

### **Attributions**

[F12-OS1.5, OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that, during a failure of the normal power supply in a fire emergency situation, emergency generator power supplies to elevators will not be capable of performing their intended functions for a length of time sufficient for emergency responders to carry out their duties, which could lead to the inability of elevator systems to be used in emergency response operations, which could lead to delays in emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire, which could lead to harm to persons.

*Intent 2.* To clarify that the emergency generator power supply required by Clause 3.2.7.9.(1)(a) is required to simultaneously operate all elevators for firefighters plus one additional elevator for recall.

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that, during a failure of the normal power supply in a fire emergency situation, emergency generator power supplies to elevators will not be capable of performing their intended functions for a length of time sufficient for emergency responders to carry out their duties, which could lead to the inability of elevator systems to be used in emergency response operations, which could lead to delays in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

*Intent 2.* To clarify that the emergency generator power supply required by Clause 3.2.7.9.(1)(a) is required to simultaneously operate all elevators for firefighters plus one additional elevator for recall.

---

**Objective**

OS3

**Attributions**

[F36-OS3.6] [F12-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that, during a failure of the normal power supply, persons will be trapped in an elevator, which could lead to harm to persons.

*Intent 2.* To limit the probability that, during a failure of the normal power supply in an emergency situation, emergency generator power supplies to elevators will not be capable of performing their intended functions for a length of time sufficient for emergency responders to carry out their duties, which could lead to the inability of elevator systems to be used in emergency response operations, which could lead to delays in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders.

*Intent 3.* To clarify that the emergency generator power supply required by Clause 3.2.7.9.(1)(a) is required to simultaneously operate all elevators for firefighters plus one additional elevator for recall.

---

**Provision: 3.2.7.9.(3)**

---

**Intent(s)**

*Intent 1.* To exempt, from the application of Sentence 3.2.7.9.(2), buildings in which all elevators can be recalled to a reference level within a certain period of time, on the basis that the elevators can be returned before the time that the firefighters' elevator will be required for use.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.2.7.10.(1)**

---

#### **Intent(s)**

*Intent 1.* To clarify in which cases electrical conductors are required to be protected.

**Intent(s)**

*Intent 1.* To limit the probability that electrical conductors will fail prematurely when exposed to fire, which could lead to fire alarm systems and emergency equipment not operating properly in a fire situation, which could lead to:

- fire emergency response operations being delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building, and
- the buildup of smoke in exit stairs or floor areas, which could lead to:
  - delays or inefficiencies in fire suppression operations, which could lead to the spread of fire, which could lead to damage to the building, and
  - damage to the building.

---

**Provision: 3.2.7.10.(7)****Intent(s)**

*Intent 1.* To exempt certain fire alarm branch circuits from the requirements of Sentence (2), when the transponders and individual devices are within the same storey, on the basis that occupants will have vacated the floor of fire origin.

---

**Provision: 3.2.7.10.(8)****Objective**

OS1

**Attributions**

[F06-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that power supply conductors will fail prematurely when exposed to fire, which could lead to emergency lighting not operating properly in a fire situation, which could lead to fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Objective**

OP1

### **Attributions**

[F06-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that power supply conductors will fail prematurely when exposed to fire, which could lead to emergency lighting not operating properly in a fire situation, which could lead to fire emergency response operations being delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

### **Provision: 3.2.7.10.(9)**

---

### **Intent(s)**

*Intent 1.* To exempt certain conductors from the requirements of Sentence (2), on the basis that:

- emergency lighting units within the same storey need not operate for extended periods of time as it is assumed that occupants will rapidly vacate the floor of fire origin, and
- it is assumed that a fire within the same storey will render emergency lighting units inoperative as they are not tested nor designed to operate continually under fire conditions.

---

### **Provision: 3.2.8.1.(1)**

---

### **Objective**

OS1

### **Attributions**

[F03, F06-OS1.2] [F05-OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread:

- from a lower floor level to upper floor levels in a fire situation, or
- from a floor area into exit stairs in a fire situation.

This is to limit the probability of the spread of fire in the upper floor levels or in the exit stairs, which could lead to:

- delays or ineffectiveness in fire suppression operations, which could lead to the spread of fire, which could lead to harm to persons, and
- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To state the application of Articles 3.2.8.3. to 3.2.8.9.

---

### **Objective**

OP1

### **Attributions**

[F03, F06-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread:

- from a lower floor level to upper floor levels in a fire situation, or

- from a floor area into exit stairs in a fire situation.

This is to limit the probability of the spread of fire in the upper floor levels or in the exit stairs, which could lead to:

- delays or ineffectiveness in fire suppression operations, which could lead to the spread of fire, which could lead to damage to the building, and
- damage to the building.

*Intent 2.* To state the application of Articles 3.2.8.3. to 3.2.8.9.

---

**Provision: 3.2.8.1.(2)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Sections 3.4., 3.5. and 3.6. for requirements pertaining to the penetration of floor assemblies by exits or vertical service spaces.

---

**Provision: 3.2.8.1.(3)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Clause 3.2.8.1.(1)(b) and not permit a certain occupancy within an interconnected floor space, even though the interconnected floor space is designed with certain fire protection measures, on the basis that persons who are sleeping will be exposed to an undue fire risk.

---

**Provision: 3.2.8.2.(1)**

---

**Intent(s)**

*Intent 1.* To exempt mezzanines serving certain major occupancies from the requirements of Sentence 3.2.8.1.(1) and Articles 3.2.8.3. to 3.2.8.9., which would otherwise require a vertical fire separation or certain fire protection measures, on the basis that the mezzanine area is limited in size and sufficiently open to allow occupants to detect a threat to their safety and not be excessively delayed in reaching an exit.

---

**Provision: 3.2.8.2.(2)**

---

**Intent(s)**

*Intent 1.* To exempt openings through a horizontal fire separation for vehicular ramps in a storage garage from the requirements of Subsection 3.2.8. [specifically Sentence 3.2.8.1.(1) and Articles 3.2.8.3. to 3.2.8.9.], which would otherwise require a vertical fire separation or certain fire protection measures, on the basis that fire risks are minimized and are unlikely to endanger occupants of the building.

---

**Provision: 3.2.8.2.(3)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt openings in fire separations used in manufacturing operations [e.g. openings used for the flow of material from storey to storey] from the requirements of Sentence 3.2.8.1.(1) and Articles 3.2.8.3. to 3.2.8.9., which would otherwise require a vertical fire separation or certain fire protection measures, if equivalent fire protection is provided to compensate for the lack of closure.

This is to limit the probability that fire will spread through the openings to other parts of the building, which could lead to harm to persons in other parts of the building.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To exempt openings in fire separations used in manufacturing operations [e.g. openings used for the flow of material from storey to storey] from the requirements of Sentence 3.2.8.1.(1) and Articles 3.2.8.3. to 3.2.8.9., which would otherwise require a vertical fire separation or certain fire protection measures, if equivalent fire protection is provided to compensate for the lack of closure.

This is to limit the probability that fire will spread through the openings to other parts of the building, which could lead to damage to the building.

---

### **Provision: 3.2.8.2.(4)**

---

### **Intent(s)**

*Intent 1.* To exempt interconnected floor spaces in Group B, Division 1 occupancies from the requirements of Articles 3.2.8.3. to 3.2.8.9., which would otherwise require certain fire protection measures, if the number of interconnected storeys is limited, on the basis that such occupancies [e.g. prisons or detention buildings] are expected to have:

- continuous supervision that will be able to respond to a fire quickly and, if needed, evacuate the occupants, and
- a minimized fire load within any fire compartment.

---

### **Provision: 3.2.8.2.(5)**

---

### **Objective**

OS1

### **Attributions**

[F02, F03-OS1.2]

### **Intent(s)**

*Intent 1.* To exempt openings for escalators and inclined moving walks from the requirements of Articles 3.2.8.3. to 3.2.8.9., which would otherwise require certain fire protection measures, if:

- the size of the openings is limited,
- the building is sprinklered throughout, and
- the interconnected floor space contains only certain major occupancies.

This is to limit the probability that:

- large openings will permit the spread of fire to other parts of the building,
- a fire will not be controlled or suppressed, which could lead to the spread of fire through the openings, and

---

## Intent Statements: NBC 2010

- fire hazards [from the type of occupancy] will not be minimized, which could lead to the start and spread of fire through the openings.

This is to limit the probability of harm to persons.

---

### Objective

OP1

### Attributions

[F02, F03-OP1.2]

### Intent(s)

*Intent 1.* To exempt openings for escalators and inclined moving walks from the requirements of Articles 3.2.8.3. to 3.2.8.9., which would otherwise require certain fire protection measures, if:

- the size of the openings is limited,
- the building is sprinklered throughout, and
- the interconnected floor space contains only certain major occupancies.

This is to limit the probability that:

- large openings will permit the spread of fire to other parts of the building,
- a fire will not be controlled or suppressed, which could lead to the spread of fire through the openings, and
- fire hazards [from the type of occupancy] will not be minimized, which could lead to the start and spread of fire through the openings.

This is to limit the probability of damage to the building.

---

### Provision: 3.2.8.2.(6)

---

### Intent(s)

*Intent 1.* To exempt certain interconnected floor spaces from the requirements of Sentence 3.2.8.1.(1) and Articles 3.2.8.3. to 3.2.8.9., which would otherwise require a vertical fire separation or certain fire protection measures, if:

- the location and number of interconnected floors is limited, which will minimize:
  - vertical fire spread, and
  - delays in emergency responder access and evacuation of occupants,
- the openings through the floor are used only for stairways, escalators or moving walks, or the interconnected floor space is sprinklered, which will minimize vertical fire spread,
- the interconnected floor space contains only certain major occupancies, which will minimize fire risks, and
- the building area is limited, which will minimize delays in emergency responder access and evacuation of occupants.

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread into a public corridor, or from a public corridor into a suite, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that fire will spread into a public corridor, which could lead to fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, or
- the spread of fire to other parts of the building, which could lead to harm to persons.

#### **Attributions**

[F03, F06-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread into a public corridor, or from a public corridor into a suite, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread into a public corridor, which could lead to fire emergency response operations being delayed or ineffective, which could lead to the further spread of fire, which could lead to damage to the building.

### **Provision: 3.3.1.4.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F03, F05-OS1.5] [F06-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To exempt fire separations in public corridors from the application of Sentence 3.3.1.4.(2), which would otherwise require the fire separation to have a fire-resistance rating, on the basis that the storey is sprinklered throughout and the corridor does not serve certain occupancies.

This is to limit the probability that a fire will not be suppressed or controlled, which could lead to:

- the spread of fire into the public corridor, or from the public corridor into a suite, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F03, F06-OP1.2]

**Intent(s)**

*Intent 1.* To exempt fire separations in public corridors from the application of Sentence 3.3.1.4.(2), which would otherwise require the fire separation to have a fire-resistance rating, on the basis that the storey is sprinklered throughout and the corridor does not serve certain occupancies.

This is to limit the probability that a fire will not be suppressed or controlled, which could lead to:

- the spread of fire into the corridor, or from the corridor to another part of the building, which could lead to damage to the building, and
- fire emergency response operations being delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

**Provision: 3.3.1.4.(4)**

---

**Objective**

OS1

**Attributions**

3.3.1.4.(4)(a), 3.3.1.4.(4)(b) [F03, F05, F10-OS1.5] [F06, F12-OS1.2, OS1.5]

3.3.1.4.(4)(c) [F03, F05-OS1.5] [F03, F06-OS1.5, OS1.2]

**Intent(s)**

*Intent 1.* To exempt certain public corridors from the application of Sentence 3.3.1.4.(1), which would otherwise require a fire separation between a public corridor and the remainder of the storey, on the basis that the storey is sprinklered throughout and:

- the travel distance to an exit is limited and the corridor does not serve certain occupancies, or
- the corridor has a minimum width and ceiling height, and the combined area of the occupancies in the corridor is restricted.

This [the sprinklering] is to limit the probability that a fire will not be suppressed or controlled, which could lead to the spread of fire into the public corridor, or from the public corridor into a suite.

This [limitation on travel distance] is to limit the probability of excessive travel distance during a fire situation.

This is to limit the probability of:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- fire emergency response operations being delayed or ineffective, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, and
  - the spread of fire to other parts of the building, which could lead to harm to persons.

This [the minimum corridor width and the restriction on the area of occupancies] is to limit the probability of insufficient corridor width during a fire situation, which could lead to:

---

## **Intent Statements: NBC 2010**

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons,
- the spread of fire from occupancies on one side of the corridor to occupancies on the other side of the corridor by means of activities and occupancies in the corridor, and
- delays or inefficiencies in emergency response operations, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
  - the spread of fire to other parts of the building, which could lead to harm to persons.

**Intent 2.** To exempt certain public corridors from the application of Sentence 3.3.1.4.(1) by waiving the requirement for a fire separation of the corridor from a space containing plumbing fixtures required by Subsection 3.7.2., on the basis that:

- the space is treated as part of the public corridor since there is expected to be no appreciable fire load in the room,
- the storey is sprinklered throughout, and
- the room and the public corridor are separated from the remainder of the storey.

This is to limit the probability of the spread of fire into the public corridor, or from the public corridor into a suite, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- fire emergency response operations being delayed or ineffective, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, and
  - the spread of fire to other parts of the building, which could lead to harm to persons.

### **Intent(s)**

**Intent 1.** To exempt certain public corridors from the application of Sentence 3.3.1.4.(1), which would otherwise require a fire separation between a public corridor and the remainder of the storey, on the basis that the storey is sprinklered throughout and:

- the travel distance to an exit is limited and the corridor does not serve certain occupancies, or
- the corridor has a minimum width and ceiling height, and the combined area of the occupancies in the corridor is restricted.

This [the sprinklering] is to limit the probability that a fire will not be suppressed or controlled, which could lead to the spread of fire into the public corridor, or from the public corridor into a suite, which could lead to:

- damage to building, and
- fire emergency response operations being delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

This [limitation on travel distance] is to limit the probability of excessive travel distance during a fire situation, which could lead to delays or inefficiencies in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

This [the minimum corridor width and the restriction on the area of occupancies] is to limit the probability of:

- insufficient corridor width during a fire situation, which could lead to delays or inefficiencies in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building, and
- the spread of fire from occupancies on one side of the corridor to occupancies on the other side of the corridor by means of activities and occupancies in the corridor, which could lead to damage to the building.

**Intent 2.** To exempt certain public corridors from the application of Sentence 3.3.1.4.(1) by waiving the requirement for a fire separation of the corridor from a space containing plumbing fixtures required by Subsection 3.7.2., on the basis that:

- the space is treated as part of the public corridor since there is expected to be no appreciable fire load in the room,
- the storey is sprinklered throughout, and
- the space and the public corridor are separated from the remainder of the storey.

This is to limit the probability of the spread of fire into the public corridor, or from the public corridor into a suite, which could lead to:

- damage to the building, and
- fire emergency response operations being delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

### **Provision: 3.3.1.5.(1)**

#### **Objective**

OS1

#### **Attributions**

[F10, F05-OS1.5]

#### **Intent(s)**

**Intent 1.** To limit the probability of delays in the evacuation or movement of persons to a safe place if a doorway becomes inaccessible to the occupants due to a fire that originated in the room or suite, which could lead to harm to persons.

---

### **Provision: 3.3.1.5.(2)**

#### **Objective**

OS1

#### **Attributions**

[F05, F10-OS1.5]

#### **Intent(s)**

**Intent 1.** To limit the probability that egress doors will be located too close to one another, which could lead to persons not having a choice of an alternative egress route in the event that one route to the exits is blocked or obstructed in a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.3.1.6.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F10-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that delays will occur in reaching a doorway when a fire originates in the room or suite, which could lead to harm to persons.

*Intent 2.* To expand the application of travel distances for exits stated in Clauses 3.4.2.5.(1)(a), 3.4.2.5.(1)(b), 3.4.2.5.(1)(c) and 3.4.2.5.(1)(f) so they apply to travel distances to egress doorways as well.

### **Provision: 3.3.1.7.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F10, F05-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons with physical or sensory disabilities will not be protected or will be delayed in evacuating or moving to a safe place in a fire situation, which could lead to harm to persons.

*Intent 2.* To expand the application of Sentences 3.2.6.5.(4) to 3.2.6.5.(6), Clauses 3.2.6.5.(3)(b) and 3.2.6.5.(3)(c), and Sentence 3.4.2.5.(1).

*Intent 3.* To state the applications of Sentences 3.3.1.7.(2) to 3.3.1.7.(5).

---

#### **Objective**

OS1

#### **Attributions**

3.3.1.7.(1)(a) [F06-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will be delayed or ineffective in carrying out their fire emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders.

*Intent 2.* To expand the application of Sentences 3.2.6.5.(4) to 3.2.6.5.(6), Clauses 3.2.6.5.(3)(b) and 3.2.6.5.(3)(c), and Sentence 3.4.2.5.(1).

*Intent 3.* To state the applications of Sentences 3.3.1.7.(2) to 3.3.1.7.(5).

### **Provision: 3.3.1.7.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2] [F06-OS1.5]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that fire will spread from one zone to another zone of the floor area, which could lead to harm to persons in the other zone.

*Intent 2.* To limit the probability that fire will spread from one zone to another zone of the floor area, which could lead to fire emergency response operations involving the other zone being delayed or ineffective, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.1.7.(3)**

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.1.7.(2) and permit a lower minimum fire-resistance rating on the basis that the rating of the separation need not be any more than that of the other assemblies that enclose the zone.

---

### **Provision: 3.3.1.7.(4)**

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2] [F06-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke will spread through door openings from one zone to another zone of the floor area, which could lead to harm to persons in the other zone.

*Intent 2.* To limit the probability that smoke will spread through door openings from one zone to another zone of the floor area, which could lead to fire emergency response operations involving the other zone being delayed or ineffective, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

#### **Objective**

OS1

#### **Attributions**

3.3.1.7.(5)(a) [F10, F73-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will be delayed in moving to a safe place [balcony] in a fire situation, which could lead to harm to persons.

---

#### **Objective**

OS1

#### **Attributions**

3.3.1.7.(5)(b), 3.3.1.7.(5)(c) [F10-OS1.5]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability of insufficient space on balconies to accommodate persons using manual wheelchairs or other manual mobility assistance devices in the floor area in a fire situation, which could lead to delays in moving to a safe place [balcony], which could lead to harm to persons.

---

### **Provision: 3.3.1.8.(1)**

#### **Intent(s)**

*Intent 1.* To expand the application of Article 3.4.3.4., which would otherwise apply only to exits.

*Intent 2.* To exempt the headroom clearance within the floor area of a storage garage from the requirements of Article 3.4.3.4., on the basis that this is covered in Sentence 3.3.5.4.(5).

---

### **Provision: 3.3.1.9.(1)**

#### **Objective**

OS3

#### **Attributions**

[F10, F12-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that public corridors will be of insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability of an insufficient corridor width during an emergency situation, which could lead to delays or inefficiencies in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.1.9.(2)**

#### **Objective**

OS3

#### **Attributions**

[F10, F12-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that corridors will be of an insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability of an insufficient corridor width during an emergency situation, which could lead to delays or inefficiencies in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.1.9.(3)**

#### **Objective**

OS3

#### **Attributions**

[F30, F73-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person with a visual disability will hit an obstruction in a corridor that cannot be detected by a cane, which could lead to harm to persons.

---

**Provision: 3.3.1.9.(4)**

---

**Intent(s)**

*Intent 1.* To exempt an item projecting into a corridor from the dimensional limits stated in Sentence 3.3.1.9.(3) on the basis that it can be detected by a cane.

---

**Provision: 3.3.1.9.(5)**

---

**Objective**

OS3

**Attributions**

[F10, F12-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability of an insufficient corridor width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability of an insufficient corridor width during an emergency situation, which could lead to delays or inefficiencies in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.1.9.(6)**

---

**Objective**

OS3

**Attributions**

3.3.1.9.(6)(a) [F10, F12-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that public corridors will be of an insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability of an insufficient corridor width during an emergency situation, which could lead to delays or inefficiencies in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

3.3.1.9.(6)(b) [F05-OS1.5] [F06-OS1.5, OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability of excessive fire loads in a public corridor, which could lead to the spread of fire in the corridor in a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

*Intent 2.* To limit the probability of excessive fire loads in a public corridor, which could lead to the spread of fire in the corridor in a fire situation, which could lead to ineffective fire emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the further spread of fire in the corridor, which could lead to harm to persons.

---

### **Provision: 3.3.1.9.(7)**

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will enter a dead end portion of a corridor during an emergency situation and be prevented from retracing their steps as a result of crowd pressure or untenable conditions, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To exempt a corridor entirely within a suite from the requirement in the remainder of the Sentence which restricts the length of dead end portions on the basis that the occupants are familiar with the suite arrangement and are expected to make appropriate decisions in an emergency.

---

### **Provision: 3.3.1.10.(1)**

#### **Intent(s)**

*Intent 1.* To expand the application of the requirements relating to aisles in the National Fire Code to the National Building Code.

---

### **Provision: 3.3.1.11.(1)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

---

### **Provision: 3.3.1.11.(2)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of delays in opening an egress door that does not open in the direction of travel in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that an egress door that does not open in the direction of travel will be difficult to open in an emergency situation if several persons approach it at the same time and the

pressure of the group prevents the first person from pulling the door toward them, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that a person falling in front of an egress door that does not open in the direction of travel in an emergency situation will obstruct the opening of the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.1.11.(3)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability of delays in opening an egress door that does not open in the direction of travel in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that an egress door that does not open in the direction of travel will be difficult to open in an emergency situation if several persons approach it at the same time and the pressure of the group prevents the first person from pulling the door toward them, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that a person falling in front of an egress door that does not open in the direction of travel in an emergency situation will obstruct the opening of the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 4.* To limit the probability that a person will think the door is locked if it fails to open in the expected direction of travel in an emergency situation, which could lead to confusion, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.1.11.(4)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that the lack of a convention for direction of door swing will lead to delays in opening an egress door that does not open in the direction of travel in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that an egress door that does not open in the direction of travel will be difficult to open in an emergency situation if several persons approach it at the same time and the pressure of the group prevents the first person from pulling the door toward them, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that a person falling in front of an egress door that does not open in the direction of travel in an emergency situation will obstruct the opening of the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

*Intent 4.* To limit the probability that a person will think the door is locked if it fails to open in the expected direction of travel in an emergency situation, which could lead to confusion, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 5.* To limit the probability that a person will be hit by a door swinging in an unfamiliar direction, which could lead to harm to persons.

---

### **Provision: 3.3.1.12.(1)**

#### **Attributions**

3.3.1.12.(1)(a)

#### **Intent(s)**

*Intent 1.* To exempt a sliding door from the application of Sentence 3.3.1.11.(1) on the basis that it is designed to swing on a vertical axis in the direction of travel when pressure is applied.

---

#### **Objective**

OS3

#### **Attributions**

3.3.1.12.(1)(b) [F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will not be familiar with the swinging action of sliding doors in an emergency situation, which could lead to delays in opening the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will not be familiar with the swinging action of sliding doors in an emergency situation, which could lead to the build-up of a group of persons at the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that a person will not be familiar with the swinging action of sliding doors in an emergency situation, which could lead to the person thinking the door is locked if it fails to open in the expected direction of travel, which could lead to confusion, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.1.12.(2)**

#### **Intent(s)**

*Intent 1.* To exempt sliding doors in certain types of occupancies from the application of Sentence 3.3.1.12.(1) and Article 3.3.1.11., which would otherwise require the doors to swing on a vertical axis in the direction of travel, on the basis that there is constant supervision, the building is sprinklered and other safety measures addressing the operation of locking devices are provided.

---

### **Provision: 3.3.1.12.(3)**

#### **Intent(s)**

*Intent 1.* To exempt movable partitions in certain locations from the application of Sentences 3.3.1.12.(1), Sentence 3.3.1.11.(1) and 3.3.1.11.(2), which would otherwise require the doors to swing on a vertical axis in the direction of travel, on the basis that there is an alternative means of egress available that does not pass through the movable panels.

---

**Provision: 3.3.1.13.(1)**

**Objective**

OS3

**Attributions**

3.3.1.13.(1)(a), 3.3.1.13.(1)(b) [F10, F12-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that door openings will be of insufficient size to permit the efficient evacuation or movement of persons to a safe place in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that door openings will be of insufficient size in an emergency situation, which could lead to delays or inefficiencies in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

3.3.1.13.(1)(c) [F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that persons passing through the door will have difficulty in negotiating a step at the doorway, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons passing through the door will trip at the step, which could lead to harm to persons.

---

**Provision: 3.3.1.13.(2)**

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not be familiar with the release hardware of doors in an access to exit, or will not have the proper opening device [e.g. keys], which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To state the application of Sentence 3.3.1.13.(6) and, by reference, of Sentences 3.3.1.13.(7) and 3.3.1.13.(8).

---

**Provision: 3.3.1.13.(3)**

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that persons will be delayed in operating the release hardware of doors in an access to exit, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.1.13.(4)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.1.13.(3), which would otherwise require one-hand, one-action release hardware on doors, and permit additional releasing devices on doors in certain occupancies, on the basis that:

- the occupants are expected to be familiar with the release hardware, and
- the opening devices are readily operable from the inside without the use of keys, special devices or specialized knowledge.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

---

### **Provision: 3.3.1.13.(5)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that the door release hardware will be located excessively high above the floor level, which could lead to persons being unable to easily reach the hardware in an emergency situation, which could lead to delays in opening the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the door release hardware will be located excessively high above the floor level, which could lead to a person using a manual wheelchair or other manual mobility assistance device being unable to reach the hardware, which could lead to the inability to open the door without the assistance of another person.

---

### **Provision: 3.3.1.13.(6)**

---

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt doors in certain occupancies from the requirements of Sentences 3.3.1.13.(2) and 3.4.6.16.(1) to be readily openable, on the basis that the doors can be released locally or remotely by trained staff.

*Intent 2.* To state the application of Sentences 3.3.1.13.(7) and 3.3.1.13.(8).

---

### **Provision: 3.3.1.13.(7)**

#### **Objective**

OS3

#### **Attributions**

[F12-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that security personnel will be unable to operate the door release hardware from either sides of the door in an emergency situation, which could lead to persons being trapped in a contained use area or an impeded egress zone, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.1.13.(8)**

#### **Objective**

OS3

#### **Attributions**

[F12-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that security personnel will be delayed in locating and operating the door release hardware in an emergency situation, which could lead to persons being trapped in a contained use area or an impeded egress zone, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.1.13.(9)**

#### **Objective**

OS3

#### **Attributions**

[F12-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that the loss of normal power or the failure of the electrically operated locking devices will not allow security personnel to operate the door release hardware in an emergency situation, which could lead to persons being trapped in a contained use area or an impeded egress zone, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.1.14.(1)**

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To expand the application of Sentence 3.4.3.2.(8), Article 3.4.3.4. and Articles 3.4.6.1. to 3.4.6.9., with respect to dimensional, guard, handrail and slip-resistance requirements for exit ramps and stairways, so they also apply to any ramp or stairway.

---

### **Provision: 3.3.1.14.(2)**

#### **Intent(s)**

*Intent 1.* To exempt ramps and stairways used to service equipment and machinery from the application of Sentence 3.3.1.14.(1) on the basis that they are infrequently used and the persons using them should be fully capable of negotiating an unusual arrangement.

---

### **Provision: 3.3.1.15.(1)**

#### **Intent(s)**

*Intent 1.* To expand the application of Section 3.4. to exterior passageways leading to a required exit.

---

### **Provision: 3.3.1.16.(1)**

#### **Attributions**

3.3.1.16.(1)(a)

#### **Intent(s)**

*Intent 1.* To exempt treads of curved or spiral stairs from the application of Sentence 3.3.1.14.(1), which would otherwise reference conformance to the more restrictive requirements of Section 3.4., on the basis that the stairs are not part of an exit facility.

---

#### **Attributions**

3.3.1.16.(1)(b)

#### **Intent(s)**

*Intent 1.* To expand the application of Sentence 3.4.6.8.(2) to curved and spiral stairs in an access to exit.

---

### **Provision: 3.3.1.17.(1)**

#### **Intent(s)**

*Intent 1.* To clarify the basis for using occupant load values for the purpose of determining width requirements for access to exits.

---

### **Provision: 3.3.1.17.(2)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that ramps, doorways and corridors in an access to exit will have insufficient width to permit the efficient evacuation or movement of persons to a safe place during an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.1.17.(3)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that ramps in access to exits will have an insufficient width to permit the efficient evacuation or movement of persons to a safe place during an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.1.17.(4)**

---

**Intent(s)**

*Intent 1.* To supersede the minimum width values of Sentences 3.3.1.17.(2) and 3.3.1.17.(3) for corridors, doorways and ramps in an access to exit in Group B, Division 2 or Group B, Division 3 occupancies and require greater widths on the basis that during an emergency:

- persons may need to be moved while still in beds, or
- persons may need assistance from additional staff.

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that doorways, corridors and ramps in access to exits will have an insufficient width to permit the efficient evacuation or movement of persons to a safe place during an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.1.17.(5)**

---

**Intent(s)**

*Intent 1.* To expand the application of Sentences 3.4.3.2.(1) to 3.4.3.2.(3).

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.3.1.18.(1)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will fall from a higher level to a lower level, which could lead to harm to persons.

---

### **Provision: 3.3.1.18.(2)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons [e.g. children] will push their head or body through a guard and fall or become trapped or asphyxiated, which could lead to harm to persons.

*Intent 2.* To exempt a guard from the limitation on the size of openings stated in the latter part of Sentence 3.3.1.18.(2) on the basis that it can be shown that the size of openings that exceed the limit does not present a hazard [e.g. children being able to push their head or body through a guard and falling or becoming trapped or asphyxiated].

---

### **Provision: 3.3.1.18.(3)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that preschool aged children will climb a guard and fall, which could lead to harm to persons.

*Intent 2.* To exempt a guard from having to be designed to not facilitate climbing in certain locations.

---

### **Provision: 3.3.1.18.(4)**

#### **Intent(s)**

*Intent 1.* To exempt the front edges of stages and loading docks from the requirements for guards stated in Sentence 3.3.1.18.(1), on the basis that the users are familiar with the hazard and that the function of the stage or loading dock would be negatively impacted by a guard.

**Provision: 3.3.1.19.(1)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not be familiar with the existence or position of glass or transparent doors, which could lead to persons hitting or bumping into such doors, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will not be familiar with the existence of glass or transparent doors, which could lead to confusion in accessing an exit in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.3.1.19.(2)**

---

**Objective**

OS3

**Attributions**

[F20-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that glass used in the construction of glass doors will not meet proper standards, which could lead to the glass not performing as intended, which could lead to the failure of the glass [e.g. breaking or splintering], which could lead to harm to persons.

**Provision: 3.3.1.19.(3)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that persons will hit or bump into a glass panel while travelling along an access to exit, which could lead to the failure of the glass [e.g. breaking or splintering], which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will hit or bump into a glass panel while travelling along an access to exit in an emergency situation, which could lead to confusion, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.3.1.19.(4)**

---

**Intent(s)**

*Intent 1.* To exempt sliding glass partitions from the application of Sentences 3.3.1.19.(1) and 3.3.1.19.(3) on the basis that the panels:

- are suitably marked to indicate their existence and position when they are closed, and

---

## **Intent Statements: NBC 2010**

- are open and therefore not accessible to persons during normal working hours.

---

### **Provision: 3.3.1.19.(5)**

#### **Intent(s)**

*Intent 1.* To expand the application of Article 9.6.1.4. to buildings described in Sentence 1.3.3.2.(1).

---

### **Provision: 3.3.1.19.(6)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will hit or bump into a window, which could lead to the failure of the glass [e.g. breaking or splintering], which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will fall through a window if they hit or bump into it, which could lead to harm to persons.

---

### **Provision: 3.3.1.20.(1)**

#### **Objective**

OS1

#### **Attributions**

[F01-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that vapours will accumulate in sufficient quantity to form an ignitable mixture, which could lead to their ignition from a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.

*Intent 2.* To direct Code users to, and clarify the application of, Part 6 [specifically Article 6.2.2.6.].

---

### **Provision: 3.3.1.20.(2)**

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.3] Applies to the requirement for explosion-relief devices and vents.

#### **Intent(s)**

*Intent 1.* To limit the probability that an explosion will cause critical damage [structural or mechanical] to a room or building, which could lead to harm to persons in other parts of the building.

---

#### **Objective**

OP1

#### **Attributions**

[F02-OP1.3] Applies to the requirement for explosion-relief devices and vents.

**Intent(s)**

*Intent 1.* To limit the probability that an explosion will cause critical damage [structural or mechanical] to a room or building, which could lead to damage to the building.

---

**Intent(s)**

*Intent 1.* To direct Code users to, and clarify the application of, Part 6 [specifically Article 6.2.2.6.].

**Provision: 3.3.1.21.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a janitor's room to other parts of the building, which could lead to harm to persons in the other parts of the building.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a janitor's room to other parts of the building, which could lead to damage to the building.

**Provision: 3.3.1.21.(2)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.1.21.(1) and permit a lower minimum fire-resistance rating on the basis that the rating of the separation need not be any more than that of the other assemblies that enclose the room or space.

**Provision: 3.3.1.21.(3)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To exempt separations of janitors' rooms from the application of Sentence 3.3.1.21.(1) by waiving the requirement for a fire-resistance rating on the basis that the floor area is sprinklered throughout.

This is to limit the probability that a fire will not be controlled or suppressed, which could lead to the spread of fire, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP1

### **Attributions**

[F02-OP1.2]

### **Intent(s)**

*Intent 1.* To exempt separations of janitors' rooms from the application of Sentence 3.3.1.21.(1) by waiving the requirement for a fire-resistance rating on the basis that the floor area is sprinklered throughout.

This is to limit the probability that a fire will not be controlled or suppressed, which could lead to the spread of fire, which could lead to damage to the building.

---

### **Provision: 3.3.1.22.(1)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from the laundry room to other parts of the building, which could lead to harm to persons in other parts of the building.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from the laundry room to other parts of the building, which could lead to damage to the building.

---

### **Provision: 3.3.1.22.(2)**

---

### **Intent(s)**

*Intent 1.* To exempt the separations of laundry rooms from the application of Sentence 3.3.1.22.(1) by permitting a reduction in fire-resistance rating from 1 h to 45 min on the basis that the floor assemblies in the building need not have a fire-resistance rating of more than 45 min and, if they failed, it would negate the remaining rating of the fire separation between the laundry room and the remainder of the floor area.

This is to supersede the requirements of Sentence 3.3.1.22.(1) and permit a lower minimum fire-resistance rating on the basis that the rating of the separation need not be any more than the other assemblies that enclose the room.

**Provision: 3.3.1.22.(3)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To exempt the separations of laundry rooms from the application of Sentence 3.3.1.22.(1) by waiving the requirement for a fire-resistance rating on the basis that the floor area is sprinklered throughout. This is to limit the probability that a fire will not be controlled or suppressed, which could lead to the spread of fire, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

*Intent 1.* To exempt the separations of laundry rooms from the application of Sentence 3.3.1.22.(1) by waiving the requirement for a fire-resistance rating on the basis that the floor area is sprinklered throughout. This is to limit the probability that a fire will not be controlled or suppressed, which could lead to the spread of fire, which could lead to damage to the building.

**Provision: 3.3.1.23.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that obstructions will reduce the width of a means of egress, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency, which could lead to harm to persons.

---

**Intent(s)**

*Intent 1.* To exempt obstructions in a means of egress from the 750 mm width limit in the first part of Sentence 3.3.1.23.(1) on the basis that there is an alternative means of egress adjacent to, and accessible and plainly visible from, the obstructed means of egress.

**Provision: 3.3.1.24.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that persons will not be familiar with the direction of egress from a service space, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

*Intent 2.* To expand the application of Sentences 3.4.5.1.(2) and 3.4.5.1.(6) to include service spaces.

---

### **Provision: 3.3.1.25.(1)**

#### **Objective**

OS1

#### **Attributions**

[F03, F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a room used for welding and cutting operations to other parts of the building, which could lead to harm to persons in the other parts of the building.

---

#### **Objective**

OP1

#### **Attributions**

[F03, F02-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a room used for welding and cutting operations to other parts of the building, which could lead to damage to the building or facility.

---

### **Provision: 3.3.1.25.(2)**

#### **Intent(s)**

*Intent 1.* To exempt rooms that are located within industrial occupancies and in which welding and cutting operations occur from the requirements of Sentence 3.3.1.25.(1), on the basis that persons are familiar with this type of operation and other safety measures are expected to be provided in such occupancies.

---

### **Provision: 3.3.2.1.(1)**

#### **Intent(s)**

*Intent 1.* To state the application of Subsection 3.3.2.

---

### **Provision: 3.3.2.1.(2)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1] [F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that inappropriate design criteria will be used for means of egress serving assembly occupancies and outdoor places of assembly, which could lead to harm to persons.

*Intent 2.* To limit the probability that inappropriate design criteria will be used for means of egress serving assembly occupancies and outdoor places of assembly, which could lead to delays in the evacuation or movement of persons to a safe place during an emergency, which could lead to harm to persons.

---

**Intent(s)**

*Intent 1.* To exempt means of egress serving assembly occupancies and outdoor places of assembly from the application of Articles 3.3.2.4., 3.3.2.5., 3.3.2.9., 3.3.2.10. and 3.3.2.11. when NFPA 101, Chapter 12 provisions 12.2.3.2, 12.2.3.3, 12.2.5.4, 12.2.5.5, 12.2.5.6, 12.2.11.1, 12.4.1, and 12.4.2 are used.

---

**Provision: 3.3.2.1.(3)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that there will be insufficient space along the rows of seats to move easily to aisles, which could lead to harm to persons.

*Intent 2.* To limit the probability that there will be insufficient space along the rows of seats to move easily to aisles while persons are evacuating or moving to a safe place in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the requirements of NFPA 101 provisions 12.2.5.5.2., 12.2.5.5.4.1., and 12.2.5.5.5.1., which could otherwise permit the minimum clear width of aisle accessways to be less than 400 mm.

---

**Provision: 3.3.2.2.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from an adjacent occupancy to seating areas of a Group A, Division 1 occupancy, which could lead to harm to persons.

---

**Provision: 3.3.2.2.(2)**

---

**Intent(s)**

*Intent 1.* To exempt the separations of seating areas of Group A, Division 1 occupancies from the application of Sentence 3.3.2.2.(1) by permitting a reduction in the fire-resistance rating from 1 h to 45 min on the basis that the floor assemblies in the building need not have a fire-resistance rating of more than 45 min and, if they failed, it would negate the remaining rating of the fire separation between the seating areas and the remainder of the floor area.

This is to supersede the requirements of Sentence 3.3.2.2.(1) and permit a lower minimum fire-resistance rating on the basis that the rating of the separation need not be any more than the other assemblies that enclose the seating area.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.3.2.2.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2] Applies where space under tiers of seats is not *sprinklered*.

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a space under tiers of seats to the seating area, which could lead to harm to persons.

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2] Applies where space under tiers of seats is *sprinklered*.

#### **Intent(s)**

*Intent 1.* To exempt the space beneath seats from having to be separated from the seating area above by a fire separation on the basis that the space is *sprinklered*.

This is to limit the probability that a fire involving the space will spread to the seating area, which could lead to harm to persons.

### **Provision: 3.3.2.3.(1)**

---

#### **Intent(s)**

*Intent 1.* To expand the application of the requirements relating to non-fixed seating in the National Fire Code to the National Building Code.

### **Provision: 3.3.2.4.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1] [F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that seats will be dislodged or moved or be unstable, which could lead to persons tripping over or falling over or off the seats, which could lead to harm to persons.

*Intent 2.* To limit the probability that seats will be dislodged or moved or that there will be insufficient space along the rows of seats to move easily to aisles while persons are evacuating or moving to a safe place in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.3.2.4.(2)**

---

#### **Intent(s)**

*Intent 1.* To clarify how to measure the space between rows of seats with folding tablet arms to apply the row spacing requirements of Clause 3.3.2.4.(1)(c).

---

**Intent(s)**

*Intent 1.* To exempt seats with folding tablet arms from, and allow a relaxation to, the method of row spacing calculations stated in Clause 3.3.2.4.(1)(c) and in the first part of Sentence 3.3.2.4.(2) on the basis that:

- the number of seats to the nearest aisle is restricted,
- the tablet arms can be easily folded back, which prevents them from obstructing the rows, and
- the seats are restricted to lecture rooms and instructional rooms in which there will be good supervision to provide direction to the occupants in an emergency.

**Provision: 3.3.2.4.(3)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability of excessive travel distances to reach the nearest aisle, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

**Provision: 3.3.2.4.(4)**

---

**Intent(s)**

*Intent 1.* To exempt aisle locations from the requirements of Sentence 3.3.2.4.(3), which would otherwise limit travel distances to the nearest aisle, on the basis that:

- the occupants of the seats have direct access to egress doorways without the use of aisles, and
- the number of rows and seats served by the doorways is limited.

**Provision: 3.3.2.5.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Sentences 3.3.2.5.(2) to 3.3.2.5.(17).

**Provision: 3.3.2.5.(2)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that aisles will be of insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

*Intent 2.* To exempt aisles from the minimum width of 1 100 mm required in the first part of Sentence 3.3.2.5.(2) on the basis that they serve a limited number of seats.

---

### **Provision: 3.3.2.5.(3)**

#### **Intent(s)**

*Intent 1.* To exempt bleacher seats from the increased minimum width required in the latter part of Sentence 3.3.2.5.(3) on the basis that bleacher seats don't have backs and allow agile persons to walk down over the seats in an emergency, thus reducing demand on the aisles.

---

#### **Intent(s)**

*Intent 1.* To state the method of measuring aisle width.

---

### **Provision: 3.3.2.5.(4)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will become trapped or delayed in a dead-end aisle, or the egress facilities will be of insufficient width to permit efficient egress, in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.2.5.(5)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will become trapped or delayed in a dead-end portion of an aisle in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.2.5.(6)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of excessive travel distances to an exit door in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.3.2.5.(7)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that aisles will be of insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.3.2.5.(8)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that steps in a low sloping aisle will delay the movement of persons in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that steps in a low sloping aisle will lead to persons tripping or falling, which could lead to harm to persons.

**Provision: 3.3.2.5.(9)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that a steeply sloped aisle will delay the movement of persons in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that a steeply sloped aisle will lead to persons tripping or falling, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.3.2.5.(10)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that passageways between rows of seats will be sloped at the slope of the aisle that is steeper than 1 in 8, which could lead to difficulties in moving along the passageways in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that passageways between rows of seats will be steeply sloped, which could lead to persons tripping or falling, which could lead to harm to persons.

### **Provision: 3.3.2.5.(11)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the height of step risers will be excessively high or low such that it will not be easily discerned, which could lead to difficulties in moving in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that the height of step risers will be excessively high or low such that it will not be easily discerned, which could lead to persons tripping or falling, which could lead to harm to persons.

*Intent 3.* To supersede the requirements of Sentence 3.3.1.14.(1), which would otherwise require stair riser dimensions to conform to Section 3.4. for exit stairways [specifically Sentence 3.4.6.8.(2)].

### **Provision: 3.3.2.5.(12)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will trip or fall at a stepped aisle when leaving a row of seats in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will trip or fall at a stepped aisle when leaving or entering a row of seats, which could lead to harm to persons.

*Intent 3.* To supersede the requirements of Sentence 3.3.1.14.(1), which would otherwise require stair [and platform] dimensions to conform to Section 3.4. for exit stairways [specifically Article 3.4.6.3.].

### **Provision: 3.3.2.5.(17)**

---

#### **Intent(s)**

*Intent 1.* To expand the application of Clause 3.4.6.1.(1)(a) to platforms in, or adjacent to, a stepped aisle that leads to exits.

### **Provision: 3.3.2.6.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F03, F05-OS1.5] [F06-OS1.5, OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread into the corridor, or from the corridor to another part of the building, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that fire will spread into the corridor, which could lead to fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, or
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F03, F06-OP1.2]

*Intent 1.* To limit the probability that fire will spread into the corridor, or from the corridor into another part of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread into the corridor, which could lead to fire emergency response operations being delayed or ineffective, which could lead to the further spread of fire, which could lead to damage to the building.

---

**Provision: 3.3.2.6.(2)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.2.6.(1) and permit a lower minimum fire-resistance rating on the basis that the rating of the separation need not be any more than that of the other assemblies that enclose the corridor.

---

**Provision: 3.3.2.6.(3)**

---

**Objective**

OS1

**Attributions**

[F03, F05-OS1.5] [F06-OS1.5, OS1.2]

**Intent(s)**

*Intent 1.* To exempt corridor separations from the application of Sentence 3.3.2.6.(1) by waiving the requirement for a fire-resistance rating on the basis that the floor area is sprinklered throughout.

This is to limit the probability that a fire will not be controlled or suppressed, which could lead to the spread of fire into the corridor, or from the corridor to another part of the building, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- fire emergency response operations being delayed or ineffective, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, and
  - the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F03, F06-OP1.2]

**Intent(s)**

*Intent 1.* To exempt corridor separations from the application of Sentence 3.3.2.6.(1) by waiving the requirement for a fire-resistance rating on the basis that the floor area is sprinklered throughout.

This is to limit the probability that a fire will not be controlled or suppressed, which could lead to:

- the spread of fire into the corridor, or from the corridor to another part of the building, which could lead to damage to the building, and
- fire emergency response operations being delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.3.2.6.(4)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To exempt corridors used by the public in assembly occupancies from the application of Sentence 3.3.2.6.(1), which would otherwise require a fire separation, on the basis that the travel distance to an exit is limited.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.3.2.7.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of delays in opening an egress door in an emergency situation, which could lead to delays in the evacuation or movement of a large number of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To expand the application of Sentence 3.8.3.3.(7) to certain doors other than those in a barrier-free path.

### **Provision: 3.3.2.8.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of excessive travel distances along a row of seats to reach the nearest aisle in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of overcrowding, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

**Provision: 3.3.2.8.(2)**

---

**Intent(s)**

*Intent 1.* To exempt bench-type seating from the application of Clause 3.3.2.4.(1)(c) and permit a reduction in seat spacing on the basis that the minimum spacing specified provides sufficient space to allow occupants to move out of their seats, proceed along the row and leave the building during the time that the egress route is tenable.

**Provision: 3.3.2.8.(3)**

---

**Intent(s)**

*Intent 1.* To exempt bench-type seating from the application of Clause 3.3.2.4.(1)(c) and permit a reduction in seat spacing on the basis that the minimum spacing specified provides sufficient space to allow occupants to move out of their seats, proceed along the row and leave the building during the time that the egress route is tenable.

**Provision: 3.3.2.9.(1)**

---

**Intent(s)**

*Intent 1.* To exempt guards in certain locations and occupancies from the requirements of Article 3.3.1.18. and permit a reduction in the height of guards on the basis that there is a need for seated persons to be able to see through or over the top of guards for the events being viewed.

**Provision: 3.3.2.9.(2)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.2.9.(1) and require higher guards on the basis that the protection requirements for bleacher seat locations should be more stringent than that for other types of fixed seating since it is more likely that occupants will stand on the seats.

**Provision: 3.3.2.9.(3)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.2.9.(1) and require higher guards on the basis that the protection requirements for bleacher seat locations should be more stringent than that for other types of fixed seating since it is more likely that occupants will stand on the seats.

**Provision: 3.3.2.9.(4)**

---

**Intent(s)**

*Intent 1.* To exempt openings in guards for bleacher seats from the restrictions on opening size stated in Sentence 3.3.1.18.(2) on the basis that a degree of control is exercised to prevent excessively large openings and that the guard is used as protection for bleacher seats, and close spacing would interfere with the viewing of events and the utility of the seating.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.3.2.10.(1)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that an insufficient number of exits will lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

---

### **Provision: 3.3.2.10.(2)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of excessive travel distances to an area of refuge in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.2.10.(3)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of excessive travel distances between exits, which could lead to excessive travel distances to reach an exit in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.2.10.(4)**

#### **Intent(s)**

*Intent 1.* To expand the application of Sentence 3.4.3.2.(3) to means of egress.

---

### **Provision: 3.3.2.10.(5)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To exempt aisles in Group A, Division 4 occupancies from the requirements of Article 3.3.2.5., which applies to aisles in assembly occupancies in general, if certain measures are taken.

This is to limit the probability of:

- excessive travel distances along seat rows to reach aisles in an emergency situation,
- insufficient width of aisles to permit efficient egress in an emergency situation, and
- steps in aisles.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.2.11.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To exempt steps in aisles in bleachers of the telescopic type from the requirements of Sentences 3.3.2.5.(11) à 3.3.2.5.(14), which apply to aisle steps in assembly occupancies in general, if certain measures are taken.

This is to limit the probability of:

- excessively high risers, and
- excessively narrow step treads.

This is to limit the probability of:

- delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons, and
- persons tripping or falling, which could lead to harm to persons.

---

**Provision: 3.3.2.11.(2)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To exempt steps in aisles in bleachers of the telescopic type from the requirements of Sentences 3.3.2.5.(11) to 3.3.2.5.(14), which apply to aisle steps in assembly occupancies in general, if certain measures are taken.

This is to limit the probability of:

- excessively high risers,
- risers between platforms being unequal, and
- steps in portions of the width of an aisle.

This is to limit the probability of:

- delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons, and
- persons tripping or falling, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.3.2.11.(3)**

---

#### **Intent(s)**

*Intent 1.* To exempt steps in aisles in bleachers of the telescopic type from the requirements of Sentences 3.3.2.5.(11) to 3.3.2.5.(14), which apply to aisle steps in assembly occupancies in general, if certain measures are taken.

This is to limit the probability of:

- excessively high risers,
- risers between platforms being unequal, and
- steps in portions of the width of an aisle.

This is to limit the probability of:

- delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons, and
- persons tripping or falling, which could lead to harm to persons.

---

**Provision: 3.3.2.13.(5)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2] [F06-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that smoke will spread from a stage to the seating area, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that smoke will spread from a stage to the seating area, which could lead to fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP1

### **Attributions**

[F02, F06-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that smoke will spread from a stage to the seating area, which could lead to damage to the building.

*Intent 2.* To limit the probability that smoke will spread from a stage to the seating area, which could lead to fire emergency response operations being delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

### **Provision: 3.3.2.13.(6)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2, OS1.5]

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.1.13.(3) by waiving the requirement for a fire separation between the stage and the seating area on the basis that the building is sprinklered throughout and a sprinkler deluge system is installed at the stage opening.

This is to limit the probability that a fire originating in the stage or other parts of the building will not be controlled or suppressed, which could lead to the spread of fire to the seating area, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.1.13.(3) by waiving the requirement for a fire separation between the stage and the seating area on the basis that the building is sprinklered throughout and a sprinkler deluge system is installed at the stage opening.

This is to limit the probability that a fire originating in the stage or other parts of the building will not be controlled or suppressed, which could lead to the spread of fire to the seating area, which could lead to damage to the building.

---

### **Provision: 3.3.2.14.(1)**

---

### **Objective**

OS3

### **Attributions**

[F30-OS3.1]

### **Intent(s)**

*Intent 1.* To exempt steps in an establishment serving food and beverages from the application of Sentence 3.4.6.2.(1), as referenced by Sentence 3.3.1.14.(1), on the basis that additional measures [minimum width, illumination and handrails] are incorporated to assist persons to use the steps safely, thus minimizing the risk of injuries.

---

**Provision: 3.3.2.15.(1)**

**Objective**

OS1

**Attributions**

[F12-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability of delays or ineffectiveness in conducting firefighting operations, which could lead to the spread of fire outside the storage room, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability of delays or ineffectiveness in conducting firefighting operations, which could lead to the spread of fire outside the storage room, which could lead to damage to the building.

---

**Provision: 3.3.3.1.(1)**

**Intent(s)**

*Intent 1.* To state the application of Subsection 3.3.3.

---

**Provision: 3.3.3.2.(1)**

**Objective**

OS3

**Attributions**

[F44-OS3.4]

**Intent(s)**

*Intent 1.* To supersede the application of Sentence 3.1.8.1.(2), which permits openings in fire separations, even if protected by closures, and not permit any openings in fire separations between a care, treatment or detention occupancy and a repair garage.

This is to limit the probability that carbon monoxide, exhaust fumes or other toxic vapours will migrate from the repair garage into the care, treatment or detention occupancy, which could lead to the accumulation of such vapours to levels that could pose a risk to human health from short-term exposure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To supersede the application of Sentence 3.1.8.1.(2), which permits openings in fire separations, even if protected by closures, and not permit any openings in fire separations between a care, treatment or detention occupancy and a repair garage.

This is to limit the probability that smoke from a fire in the repair garage will migrate from the garage into the care, treatment or detention occupancy, which could lead to harm to persons.

---

### **Provision: 3.3.3.3.(1)**

---

### **Objective**

OS3

### **Attributions**

[F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that persons, patients or residents will become delayed or trapped in a dead-end portion of a corridor in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.3.3.(2)**

---

### **Objective**

OS3

### **Attributions**

[F10-OS3.7]

### **Intent(s)**

*Intent 1.* To supersede the application of Sentence 3.3.3.3.(1) and permit dead-end corridors of a certain configuration and up to a certain length on the basis that additional safety measures are required in this type of occupancy. This is to limit the probability that persons, patients or residents will become delayed or trapped in a dead-end portion of a corridor in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

[F10, F12-OS3.7]

### **Intent(s)**

**Intent 1.** To supersede the minimum 1 100 mm value for corridor width required in Sentence 3.3.1.9.(2) in certain buildings of care or treatment occupancy to accommodate the movement of patients and residents, either mobile or in beds, in an emergency situation.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons. [Clauses (a) and (b)]

**Intent 2.** To expand the application of Sentence 3.3.1.9.(2) in certain buildings of care occupancy on the basis of the limited number of residents. [Clause (c)]

**Intent 3.** To limit the probability that corridors will not be able to accommodate the movement of patients and residents, either mobile or in beds, in certain buildings of care or treatment occupancy in an emergency situation, which could lead to delays or inefficiencies in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.3.3.(4)**

---

**Objective**

OS3

**Attributions**

3.3.3.3.(4)(a) [F10-OS3.7]

**Intent(s)**

**Intent 1.** To limit the probability of delays in opening an egress door that does not open in the direction of travel in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Intent 2.** To limit the probability that an egress door that does not open in the direction of travel will be difficult to open in an emergency situation if several persons approach it at the same time and the pressure of the group prevents the first person from pulling the door toward them, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Intent 3.** To limit the probability that a person falling in front of an egress door that does not open in the direction of travel in an emergency situation will obstruct the opening of the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

3.3.3.3.(4)(b) [F10, F12-OS3.7]

**Intent(s)**

**Intent 1.** To override the 800 mm value for the minimum width of a door leaf stated in Sentence 3.3.1.13.(1) so as to limit the probability that doors in corridors will be of insufficient width to permit the efficient movement of patients in bed in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Intent 2.** To limit the probability that door openings will be of insufficient size to permit the efficient evacuation or movement of persons to a safe place in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Intent 3.** To limit the probability that door openings will be of insufficient size in an emergency situation, which could lead to delays or inefficiencies in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that patients and emergency responders will be exposed to hazardous conditions during a fire emergency while arrangements are being made to move patients to a safer location, which could lead to harm to persons, including emergency responders.

*Intent 2.* To limit the probability that emergency responders will be exposed to hazardous conditions during a fire emergency while arrangements are being made to move patients to a safer location, which could lead to fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F06-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will be exposed to hazardous conditions during a fire emergency while arrangements are being made to move patients to a safer location, which could lead to fire emergency response operations being delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

### **Provision: 3.3.3.5.(3)**

### **Intent(s)**

*Intent 1.* To exempt a floor area from the 1 000 m<sup>2</sup> restriction on compartment size as required in Sentence 3.3.3.5.(2) on the basis that a firewall [definition of a horizontal exit] provides sufficient protection for the floor area on the other side to serve as a refuge area.

---

### **Provision: 3.3.3.5.(4)**

---

### **Objective**

OS1

### **Attributions**

[F05-OS1.2] [F06-OS1.2, OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to an adjacent fire compartment, which could lead to patients and emergency responders being exposed to hazardous conditions, which could lead to harm to persons, including emergency responders.

*Intent 2.* To limit the probability that fire will spread from one fire compartment to an adjacent fire compartment, which could lead to emergency responders being exposed to hazardous conditions, which could lead to fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, or
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP1

### **Attributions**

[F03, F06-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to an adjacent fire compartment, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread from one fire compartment to an adjacent fire compartment, which could lead to emergency responders being exposed to hazardous conditions, which could lead to fire emergency response operations being delayed or ineffective, which could lead to the further spread of fire, which could lead to damage to the building.

---

### **Provision: 3.3.3.5.(5)**

---

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.3.5.(4) and permit a lower minimum fire-resistance rating on the basis that the rating of the separation need not be any more than that of the other assemblies that enclose the fire compartment.

---

### **Provision: 3.3.3.5.(6)**

---

### **Objective**

OS1

### **Attributions**

[F05-OS1.2] [F06-OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that smoke will spread through or around closures in fire separations between fire compartments, which could lead to patients and emergency responders being exposed to hazardous conditions, which could lead to harm to persons, including emergency responders.

*Intent 2.* To limit the probability that smoke will spread through or around closures in fire separations between fire compartments, which could lead to emergency responders being exposed to hazardous conditions, which could lead to fire emergency response operations being delayed or ineffective, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders.

---

### **Provision: 3.3.3.5.(7)**

---

### **Objective**

OS1

### **Attributions**

[F10-OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability of excessive travel distances to a door to an adjoining fire compartment, which could lead to delays in moving patients to the adjoining fire compartment in a fire situation, which could lead to harm to persons.

---

**Provision: 3.3.3.5.(8)**

**Objective**

OS1

**Attributions**

[F10-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that fire compartments will have insufficient occupant capacity [to accommodate, in addition to its own occupants, the occupants of the largest adjacent fire compartment], which could lead to persons in one compartment who are experiencing hazardous conditions in a fire being unable to transfer into an adjoining compartment, which could lead to harm to persons.

---

**Provision: 3.3.3.5.(9)**

**Objective**

OS1

**Attributions**

[F03, F05-OS1.2] [F06-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that smoke will spread from a patient's or resident's sleeping room to the remainder of the floor area, which could lead to harm to persons.

*Intent 2.* To limit the probability that smoke will spread from a patient's or resident's sleeping room to the remainder of the floor area, which could lead to fire emergency response operations being delayed or ineffective, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.3.5.(10)**

**Intent(s)**

*Intent 1.* To exempt walls within a group of intercommunicating patients' or residents' sleeping rooms from the requirements of Sentence 3.3.3.5.(9) to be fire separations on the basis that the occupant load in the rooms is small and that the group of rooms is essentially self-contained and has no storage, bathing or toilet facilities that would add fire load to the rooms.

---

**Provision: 3.3.3.5.(11)**

**Intent(s)**

*Intent 1.* To exempt walls within individual suites of care occupancy from the requirements of Sentence 3.3.3.5.(9) to be constructed as fire separations on the basis that the occupant load in the suite is limited.

---

**Provision: 3.3.3.5.(12)**

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentences 3.1.8.13.(1) and 3.3.3.5.(9), which would otherwise require positive latching devices, and permit roller latches on the basis that doors would be propped

---

## **Intent Statements: NBC 2010**

open to overcome the inconvenience of patient care staff having to use door release hardware to move into or out of a room, frequently while carrying supplies, thereby defeating the door's role in smoke control and compromising the safety of persons in the fire compartment.

---

### **Provision: 3.3.3.5.(13)**

#### **Objective**

OS1

#### **Attributions**

[F03, F05-OS1.2] [F06-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that smoke will spread through grilles, louvres or other openings in the fire separations into the corridor, which could lead to patients and emergency responders being exposed to hazardous conditions, which could lead to harm to persons, including emergency responders.

*Intent 2.* To limit the probability that smoke will spread through grilles, louvres or other openings in the fire separations into the corridor, which could lead to emergency responders being exposed to hazardous conditions, which could lead to fire emergency response operations being delayed or ineffective, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders.

---

### **Provision: 3.3.3.5.(14)**

#### **Intent(s)**

*Intent 1.* To exempt wall or door openings in certain fire separations from the application of Sentence 3.3.3.5.(13) on the basis that smoke will probably not migrate to other parts of the floor area, and there is little potential for a fire in the space.

---

### **Provision: 3.3.3.5.(15)**

#### **Intent(s)**

*Intent 1.* To expand the application of Sentences 3.3.4.2.(1) and 3.3.4.2.(2) to the minimum fire-resistance rating of certain walls in buildings of care occupancy.

*Intent 2.* To supersede the requirements for fire separations of suites and public corridors in Articles 3.3.1.1. and 3.3.1.4.

---

### **Provision: 3.3.3.5.(16)**

#### **Intent(s)**

*Intent 1.* To exempt certain floor assemblies within suites of care occupancy in buildings of care occupancy from the requirements of Sentence 3.3.3.5.(9) to be fire separations on the basis that the occupant load in the rooms is small.

---

**Provision: 3.3.3.5.(17)**

**Objective**

OS1

**Attributions**

[F02, F03-OS1.2] [F44-OS1.1]

**Intent(s)**

*Intent 1.* To exempt fire separations between individual suites of care occupancy and an attached storage garage from the fire-resistance rating requirements of Sentence 3.3.5.6.(1) on the basis that sufficient conditions are in place to minimize the threat to the occupants of the suite posed by fire and exposure to vehicle exhaust fumes, and the suite and the attached storage garage are sprinklered.

This [the separation and sprinkler protection] is to limit the probability that a fire involving the garage will spread to the individual suites of care occupancy, which could lead to harm to persons.

This [the door requirements, fume barrier and prohibition of air ducts] is to limit the probability that vapours will migrate from the storage garage into the individual suites of care occupancy, which could lead to their accumulation and subsequent ignition by a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02, F03-OP1.2]

**Intent(s)**

*Intent 1.* To exempt fire separations between individual suites of care occupancy and an attached storage garage from the fire-resistance rating requirements of Sentence 3.3.5.6.(1) on the basis that the suite and the attached storage garage are sprinklered and separated from the remainder of the building.

This [the separation and sprinkler protection] is to limit the probability that a fire involving the garage will spread to the suite, which could lead to damage to the building.

---

**Provision: 3.3.3.6.(1)**

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a space adjacent to the compartment to the compartment, which could lead to harm to persons in the compartment.

*Intent 2.* To limit the probability that smoke will build up in the compartment, which could lead to harm to persons in the compartment.

---

**Provision: 3.3.3.7.(1)**

**Intent(s)**

*Intent 1.* To state the application of Sentences 3.3.3.7.(2) to 3.3.3.7.(4).

---

## **Intent Statements: NBC 2010**

### **Provision: 3.3.3.7.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2] [F06-OS1.5, OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a space adjacent to a contained use area to the contained use area, which could lead to harm to persons in the contained use area.

*Intent 2.* To limit the probability that fire will spread from a space adjacent to a contained use area to the contained use area, which could lead to fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F03, F06-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a space adjacent to a contained use area to the contained use area, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread from a space adjacent to a contained use area to the contained use area, which could lead to fire emergency response operations being delayed or ineffective, which could lead to the further spread of fire, which could lead to damage to the building.

### **Provision: 3.3.3.7.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2] [F06-OS1.5, OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a space adjacent to a contained use area to the contained use area, which could lead to harm to persons in the contained use area.

*Intent 2.* To limit the probability that fire will spread from a space adjacent to a contained use area to the contained use area, which could lead to fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F02, F06-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a space adjacent to a contained use area to the contained use area, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread from a space adjacent to a contained use area to the contained use area, which could lead to fire emergency response operations being delayed or ineffective, which could lead to the further spread of fire, which could lead to damage to the building.

**Provision: 3.3.3.7.(4)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2] [F06-OS1.5, OS1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements for building sprinkler protection stated in Sentence 3.3.3.7.(3) if certain conditions are met.

This is to limit the probability that:

- smoke will build up in the contained use area or in other fire compartments,
- persons will be delayed in evacuating or moving to a safe place,
- emergency responders will be delayed in gaining access to the contained use area, which could lead to delays or ineffectiveness in carrying out fire emergency response operations, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, and
  - the spread of fire, and
  - the fire load will be excessive, which could lead to the spread of fire.

This is to limit the probability of harm to persons.

---

**Objective**

OP1

**Attributions**

[F02, F06-OP1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements for building sprinkler protection in Sentence 3.3.3.7.(3) if certain conditions are met.

This is to limit the probability that:

- smoke will build up in the contained use area or in other fire compartments,
- emergency responders will be delayed in gaining access to the contained use area, which could lead to delays or ineffectiveness in carrying out fire emergency response operations, which could lead to the spread of fire, and
- the fire load will be excessive, which could lead to the spread of fire.

---

## **Intent Statements: NBC 2010**

This is to limit the probability of damage to the building.

---

### **Provision: 3.3.3.7.(5)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To supersede the permission in Sentence 3.3.1.9.(7), which would otherwise allow dead-end corridors up to a certain length, on the basis that additional safety measures are required in this type of occupancy.

This is to limit the probability that persons will become delayed or trapped in a dead-end portion of a corridor in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.4.1.(1)**

#### **Intent(s)**

*Intent 1.* To state the application of Subsection 3.3.4.

---

### **Provision: 3.3.4.2.(1)**

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2] [F05-OS1.5] [F06-OS1.5, OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one suite to another suite, or to another part of the building, which could lead to harm to persons in the other suite or part of the building.

*Intent 2.* To limit the probability that fire will spread from a suite to a corridor serving suites, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that fire will spread from a suite to a corridor serving suites, which could lead to fire emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

*Intent 4.* To supersede the requirements for fire separations of suites and public corridors in Articles 3.3.1.1. and 3.3.1.4.

---

#### **Objective**

OP1

#### **Attributions**

[F03, F06-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one suite to another suite, or to another part of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread from a suite to a corridor serving suites, which could lead to fire emergency response operations being delayed or ineffective, which could lead to the further spread of fire, which could lead to damage to the building.

*Intent 3.* To supersede the requirements for fire separations of suites and public corridors in Articles 3.3.1.1. and 3.3.1.4.

---

**Provision: 3.3.4.2.(2)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.4.2.(1) and permit a lower minimum fire-resistance rating on the basis that the rating of the separation need not be any more than that of the other assemblies that enclose the suites.

---

**Provision: 3.3.4.2.(3)**

---

**Intent(s)**

*Intent 1.* To exempt floor assemblies within a dwelling unit from the requirements of Subsection 3.2.2. related to fire separations on the basis that:

- provisions are included to minimize the threat of fire to the occupants,
- the occupants are familiar with the arrangement of egress routes, and
- emergency responders would rarely have to enter the unit in the performance of their duties.

---

**Provision: 3.3.4.2.(4)**

---

**Objective**

OS1

**Attributions**

[F02, F03-OS1.2] [F44-OS1.1]

**Intent(s)**

*Intent 1.* To exempt separations between a dwelling unit and an attached garage from the fire-resistance rating requirements of Sentence 3.3.5.6.(1) on the basis that sufficient conditions are in place to minimize the threat to the occupants of the dwelling unit posed by fire and exposure to vehicle exhaust fumes, and the dwelling unit and the attached storage garage are sprinklered.

This [the separation and sprinkler protection] is to limit the probability that a fire involving the garage will spread to the dwelling unit, which could lead to harm to persons.

This [the door requirements, fume barrier and prohibition of air ducts] is to limit the probability that vapours will migrate from the garage into the dwelling unit, which could lead to their accumulation and subsequent ignition by a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

3.3.4.2.(4)(a), 3.3.4.2.(4)(b) [F02, F03-OP1.2]

### **Intent(s)**

*Intent 1.* To exempt separations between a dwelling unit and an attached garage from the fire-resistance rating requirements of Sentence 3.3.5.6.(1) on the basis that the dwelling unit and the attached storage garage are sprinklered and separated from the remainder of the building.

This [the separation and sprinkler protection] is to limit the probability that a fire involving the garage will spread to the dwelling unit, which could lead to damage to the building.

---

### **Provision: 3.3.4.2.(5)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2] [F01-OS1.1]

### **Intent(s)**

*Intent 1.* To waive the requirement for a fire separation between a dwelling unit and an attached garage as stated in Sentence 3.3.5.6.(1) on the basis that sufficient conditions are in place to minimize the threat posed by fire and exposure to vehicle exhaust fumes to the occupants of the dwelling unit, or to the occupants in other dwelling units.

This [the separation] is to limit the probability that a fire involving the garage or the dwelling unit will spread to other parts of the building, which could lead to harm to persons.

This [the door requirements, fume barrier and prohibition of air ducts] is to limit the probability that vapours will migrate from the garage into the dwelling unit, which could lead to their accumulation and subsequent ignition by a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

3.3.4.2.(5)(a) [F03-OP1.2]

### **Intent(s)**

*Intent 1.* To waive the requirement for a fire separation between a dwelling unit and an attached garage as stated in Sentence 3.3.5.6.(1) on the basis that the dwelling unit and garage are separated from the remainder of the building.

This [the separation] is to limit the probability that a fire involving the garage or the dwelling unit will spread to other parts of the building, which could lead to damage to the building.

---

### **Objective**

OS3

### **Attributions**

[F44-OS3.4]

**Intent(s)**

*Intent 1.* To waive the requirement for a fire separation between a dwelling unit and an attached garage as stated in Sentence 3.3.5.6.(1) on the basis that sufficient conditions are in place to minimize the threat posed by exposure to gas and vehicle exhaust fumes to the occupants to the dwelling unit, or to the occupants in other dwelling units.

This is to limit the probability that gas and fumes will migrate from the garage into the dwelling unit, which could lead to their accumulation to levels that pose a risk to human health from short-term exposure, which could lead to harm to persons.

**Provision: 3.3.4.3.(1)**

---

**Objective**

OS1

**Attributions**

*Intent 1.* To limit the probability of delays or ineffectiveness in conducting firefighting operations, which could lead to the spread of fire outside the storage room, which could lead to harm to person.

---

#### **Objective**

OP1

#### **Attributions**

[F12-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability of delays or ineffectiveness in conducting firefighting operations, which could lead to the spread of fire outside the storage room, which could lead to damage to the building.

### **Provision: 3.3.4.4.(1)**

---

#### **Intent(s)**

*Intent 1.* To exempt certain egress facilities from the application of Sentence 3.3.1.3.(8) requiring direct access to a public corridor, exterior passageway or exterior exit doorway on the same storey, on the basis that the occupants are familiar with the means of egress, and the time needed to reach a safe place in an emergency is minimized.

### **Provision: 3.3.4.4.(2)**

---

#### **Objective**

OS3

#### **Attributions**

[F10, F05-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of excessive travel distances to an egress door in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will not have the choice of an alternative egress route in the case where one route is blocked or obstructed in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.4.4.(3)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To exempt a multi-level dwelling unit from the application of Sentence 3.3.4.4.(2) relating to exits from each storey, on the basis that the travel to the exit doorway does not involve passing up or down more than one storey, or there is an outside balcony from the upper storey to act as a location for leaving the dwelling unit in an emergency.

This is to limit the probability of excessive travel distances to an exit in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.4.4.(4)**

---

**Objective**

OS1

**Attributions**

[F05-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To exempt the upper and lower levels of a multi-level dwelling unit from the application of Sentence 3.3.4.4.(2) relating to egress doorways from each storey, on the basis that the travel path [stairway] to a public access to exit is separated from the rest of the dwelling unit and is not shared with egress from another level.

This [the separation] is to limit the probability that fire will spread from other storeys in the dwelling unit to the stairway, which could lead to:

- harm to persons using the stairway, or
- the stairway becoming untenable, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.3.4.4.(5)**

---

**Objective**

OS3

**Attributions**

[F10, F05-OS3.7]

**Intent(s)**

*Intent 1.* To exempt a doorway serving a dwelling unit from the requirements of Sentences 3.3.1.3.(8) and 3.3.1.3.(9), which would otherwise require a doorway to the exterior, a public corridor or an

---

## **Intent Statements: NBC 2010**

exterior passageway, on the basis that there is a second means of egress from the dwelling unit available if the route through the exit stair is impeded, blocked, or untenable.

This is to limit the probability that persons will not have the choice of an alternative egress route in the case where one route is blocked or obstructed in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.4.4.(6)**

#### **Objective**

OS3

#### **Attributions**

[F10, F05-OS3.7]

#### **Intent(s)**

*Intent 1.* To exempt egress facilities serving a dwelling unit from the requirements of Sentences 3.3.1.3.(8) and 3.3.1.3.(9), and 3.3.1.9.(7) which would otherwise:

- require a doorway to the exterior, a public corridor or an exterior passageway, or
- prohibit a dead-end corridor that is longer than 6 m.

This is on the basis that there is a second means of egress from the dwelling unit available if the route through a means of egress leading to the exit is impeded, blocked, or untenable.

This is to limit the probability that persons will not have the choice of an alternative egress route in the case where one route is blocked or obstructed in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.4.5.(1)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person leaving a suite in an emergency situation will be unable to return to the suite if they encounter untenable conditions in the egress routes by reason of the door shutting and locking behind them, which could lead to harm to persons.

---

### **Provision: 3.3.4.6.(1)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Section 5.9.

---

### **Provision: 3.3.4.7.(1)**

#### **Intent(s)**

*Intent 1.* To expand the application of Section 9.8.

*Intent 2.* To supersede Sentence 3.3.1.14.(1), which would otherwise require stairs, ramps, landings, handrails and guards within a dwelling unit to conform to Section 3.4. more specifically Articles 3.4.6.1. to 3.4.6.9.

**Provision: 3.3.4.7.(2)**

---

**Intent(s)**

*Intent 1.* To expand the application of Section 9.8.

*Intent 2.* To supersede Sentence 3.3.1.14.(1), which would otherwise require stairs, ramps, landings, handrails and guards within a dwelling unit to conform to Section 3.4. and Part 4 for loading requirements.

**Provision: 3.3.4.8.(1)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that inadequate fall protection, particularly for children and infants, will lead to falls from a significant height through open windows, which could lead to harm to persons.

**Provision: 3.3.4.8.(2)**

---

**Intent(s)**

*Intent 1.* To exempt certain windows from the application of Sentence 3.3.4.8.(1) on the basis that the risk of falling or the harm that would result from a fall is minimal.

**Provision: 3.3.5.1.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Subsection 3.3.5.

**Provision: 3.3.5.2.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire involving an industrial occupancy will spread to other parts of the building, which could lead to harm to persons.

---

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that a fire involving an industrial occupancy will spread to other parts of the building, which could lead to damage to the building.

### **Provision: 3.3.5.3.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F12-OS1.2, OS1.5] [F01-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that difficult access to basements will delay emergency responders' access to the area of fire origin, which could lead to delays in fire emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

*Intent 2.* To limit the probability that difficulty in providing basements with adequate exhaust ventilation will lead to the accumulation of solids, liquids, gases or dusts to ignitable concentrations in low areas of a building, which could lead to a fire or explosion, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F12-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that difficult access to basements will delay emergency responders' access to the area of fire origin, which could lead to delays in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.3.5.3.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F06-OS1.5, OS1.2] Applies to the separation of entrances to *basements* and to rooms containing *building* services from the remainder of the *building*.

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will be delayed in gaining access to basements and rooms containing building services in a fire situation involving another part of the building occupied by the hazardous activity, which could lead to delays in fire emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F06-OP1.2] Applies to the separation of entrances from the remainder of the *building*.

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will be delayed in gaining access to basements and rooms containing building services in a fire situation involving another part of the building occupied by the hazardous activity, which could lead to delays in fire emergency response operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

[F05-OS1.5] [F06-OS1.2, OS1.5] Applies to the separation of *exits* from the remainder of the *building*.

**Intent(s)**

*Intent 1.* To limit the probability of delays in the evacuation or movement of persons to a safe place from basements and from rooms containing building services in a fire situation involving the hazardous activity, which could lead to harm to persons in basements and in rooms containing building services.

*Intent 2.* To limit the probability of the migration of dangerous products of combustion into common means of egress when emergency responders must keep doors open [to run hoses, etc.], which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F06-OP1.2] Applies to the separation of *exits* from the remainder of the *building*.

**Intent(s)**

*Intent 1.* To limit the probability of the migration of dangerous products of combustion into common means of egress when emergency responders must keep doors open [to run hoses, etc.], which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

**Provision: 3.3.5.3.(3)**

---

**Objective**

OS1

**Attributions**

[F44-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that explosive air-vapour mixtures or dusts will migrate into basements or service rooms from areas of the building involved with the hazardous products, which could lead to the accumulation of the mixtures or dusts in sufficient quantity to form an ignitable mixture, which

---

## **Intent Statements: NBC 2010**

could lead to the ignition of the mixtures or dusts from a nearby ignition source, which could lead to harm to persons.

---

### **Provision: 3.3.5.4.(1)**

#### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.3.5.7.(4).

---

### **Provision: 3.3.5.4.(2)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1] [F10, F12-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that the accumulation of ice or snow on stair treads or landings will lead to persons using the stairs tripping or falling, which could lead to harm to persons.

*Intent 2.* To limit the probability that the accumulation of ice or snow on stair treads or landings will lead to persons using the stairs in an emergency situation tripping or falling, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that the accumulation of ice or snow on stair treads or landings will delay emergency responders' access to the roof, which could lead to delays in carrying out emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.3.5.4.(3)**

#### **Intent(s)**

*Intent 1.* To exempt exits in a mechanical storage garage from the requirements of Sentence 3.4.4.1.(1) for a fire separation on the basis that there are few persons permitted to be above the street floor level, and those who are, are familiar with the building.

---

### **Provision: 3.3.5.4.(4)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 6.2.2.

---

### **Provision: 3.3.5.4.(5)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.3.1.8.(1) and permit a small reduction in the ceiling height of a storage garage on the basis of a low occupant load and general familiarity with this type of facility.

This is to limit the probability of contact or collision with items at the ceiling level, which could lead to harm to persons.

---

**Provision: 3.3.5.4.(6)**

**Objective**

OS3

**Attributions**

[F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that persons will fall from a higher level to a lower level, which could lead to harm to persons.

*Intent 2.* To limit the probability that vehicles will fall into floor openings, which could lead to harm to persons.

---

**Provision: 3.3.5.4.(7)**

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire involving a below-grade storey of a garage will spread to other parts of the building, which could lead to harm to persons.

*Intent 2.* To exempt open-air storeys from the latter part of Sentence 3.3.5.4.(7) requiring sprinkler protection on the basis that fire and smoke will be ventilated directly to the outdoors thereby minimizing the spread of fire from the garage to other parts of the building.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire involving a below-grade storey of a garage will spread to other parts of the building, which could lead to damage to the building.

*Intent 2.* To exempt open-air storeys from the latter part of Sentence 3.3.5.4.(7) requiring sprinkler protection on the basis that fire and smoke will be ventilated directly to the outdoors thereby minimizing the spread of fire from the garage to other parts of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.3.5.5.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a repair garage to other parts of the building, which could lead to harm to persons in the other parts of the building.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a repair garage to other parts of the building, which could lead to damage to the building.

*Intent 1.* To limit the probability that fire will spread from a storage garage to other parts of the building, which could lead to harm to persons in the other parts of the building.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a storage garage to other parts of the building, which could lead to damage to the building.

### **Provision: 3.3.5.7.(1)**

---

#### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.3.5.7.(4).

### **Provision: 3.3.5.7.(2)**

---

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt accesses provided through fire separations between a storage garage and a Group B, Division 3 occupancy from the requirements of Sentence 3.3.5.7.(1), which would otherwise require the access be through a vestibule, if certain conditions are met.

*Intent 2.* To expand the application of Clauses 3.3.4.2.(5)(b) to 3.3.4.2.(5)(d) to a fire separation between a storage garage and a Group B, Division 3 occupancy.

---

### **Provision: 3.3.5.7.(3)**

---

#### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.3.5.7.(4).

---

### **Provision: 3.3.5.7.(4)**

---

#### **Objective**

OS3

#### **Attributions**

[F44-OS3.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that gas and exhaust fumes will migrate from storage garages into other areas of the building, which could lead to the accumulation of such vapours to levels that could pose a risk to human health from short-term exposure, which could lead to harm to persons.

---

#### **Objective**

OS1

#### **Attributions**

[F44-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that gas and exhaust fumes will migrate from storage garages into other areas of the building, which could lead to the accumulation of the gas or fumes in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the gas or fumes from a nearby ignition source, which could lead to harm to persons.

---

### **Provision: 3.3.5.8.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F01-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that vapours will migrate into lower areas of a building intended for occupancy, which could lead to the accumulation of the vapours in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapours from a nearby ignition source, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.3.5.8.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F01-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that vapours will migrate into other areas of a building, which could lead to the accumulation of the vapours in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapours from a nearby ignition source, which could lead to harm to persons.

*Intent 2.* To limit the probability that vapours will accumulate in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapours from a nearby ignition source, which could lead to harm to persons.

*Intent 3.* To exempt canopies that are open on not less than 75% of their perimeter from the requirements of Sentence 3.3.5.8.(2) and permit fuel-dispensing operations inside a building, on the basis that the building design provides direct ventilation to the outdoors, thus limiting the probability that vapours will accumulate to ignitable concentrations or migrate to other parts of the building.

### **Provision: 3.3.5.9.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from an individual tenancy to other parts of the building, which could lead to harm to persons in the other parts of the building.

*Intent 2.* To supersede the requirements for fire separations of suites and public corridors in Articles 3.3.1.1. and 3.3.1.4.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from an individual tenancy to other parts of the building, which could lead to damage to the building.

*Intent 2.* To supersede the requirements for fire separations of suites and public corridors in Articles 3.3.1.1. and 3.3.1.4.

### **Provision: 3.3.6.1.(1)**

---

#### **Intent(s)**

*Intent 1.* To state the application of Subsection 3.3.6.

*Intent 1.* To limit the probability that Class 1 explosives will cause or be involved in a fire or explosion, which could lead to damage to the building.

### **Provision: 3.3.6.2.(4)**

---

#### **Objective**

OS1

#### **Attributions**

[F01-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that wiring or electrical equipment will ignite gases, vapours, combustible dusts or combustible fibres, which could lead to a fire or explosion, which could lead to harm to persons, including emergency responders.

---

#### **Objective**

OS1

#### **Attributions**

[F01-OP1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that wiring or electrical equipment will ignite gases, vapours, combustible dusts or combustible fibres, which could lead to a fire or explosion, which could lead to damage to the building.

### **Provision: 3.3.6.3.(1)**

---

#### **Objective**

OS1

#### **Attributions**

3.3.6.3.(1)(a) [F03-OS1.2] [F44-OS1.1]

#### **Intent(s)**

**Intent 1.** To limit the probability that a fire will spread from the storage room to other parts of the building, which could lead to harm to persons.

**Intent 2.** To limit the probability that a fire will spread from other parts of the building to the storage room and involve the gas cylinders, which could lead to an explosion or the further spread of fire, which could lead to harm to persons, including emergency responders.

**Intent 3.** To limit the probability that a gas leak in the storage room will migrate to other parts of the building, which could lead to ignition of the gas, which could lead to a fire or explosion outside the storage room, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

3.3.6.3.(1)(a) [F03-OP1.2]

**Intent(s)**

**Intent 1.** To limit the probability that a fire will spread from the storage room to other parts of the building, which could lead to damage to the building.

**Intent 2.** To limit the probability that a fire will spread from other parts of the building to the storage room and involve the gas cylinders, which could lead to an explosion or the further spread of fire, which could lead to damage to the building.

**Intent 3.** To limit the probability that a gas leak in the storage room will migrate to other parts of the building, which could lead to ignition of the gas, which could lead to a fire or explosion outside the storage room, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

3.3.6.3.(1)(a) [F44-OS1.2, OS1.5, OS1.1] Applies to gas-tight *fire separations*.

**Intent(s)**

**Intent 1.** To limit the probability that a gas leak in the storage room will migrate to other parts of the building, which could lead to:

- the further spread of fire or impairment of firefighting operations, which could lead to harm to persons, including emergency responders, and
- an adverse reaction with incompatible products, which could lead to a fire or explosion outside of the storage room, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

3.3.6.3.(1)(b) [F12-OS1.2] [F01-OS1.1] [F02-OS1.3]

**Intent(s)**

**Intent 1.** To facilitate the construction of the following safety features for the gas storage room:

- firefighter access from the outside,
- explosion venting to the outside, and
- exhaust ventilation to the outside.

This is to limit the probability that:

---

## **Intent Statements: NBC 2010**

- emergency response operations will be delayed or inefficient, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders,
- gases will accumulate, which could lead to their ignition from a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons, and
- an explosion in the room will cause critical damage [structural or mechanical] to the room or the building, which could lead to harm to persons in other parts of the building.

---

### **Objective**

OP1

### **Attributions**

3.3.6.3.(1)(b) [F02-OP1.3]

### **Intent(s)**

*Intent 1.* To facilitate the construction of explosion venting for the gas storage room.

This is to limit the probability that an explosion in the room will cause critical damage [structural or mechanical] to the room or the building, which could lead to damage to the building.

---

### **Objective**

OS1

### **Attributions**

3.3.6.3.(1)(c) [F12-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that there will be a delay in:

- controlling a gas leak inside the storage room, or
- removing gas cylinders from the room in the event of a fire in an adjacent part of the building.

This is to limit the probability of a fire or explosion involving the gases, which could lead to harm to persons, including emergency responders.

---

### **Objective**

OS1

### **Attributions**

3.3.6.3.(1)(d) [F44-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that a gas leak in the storage room will migrate to other parts of the building, which could lead to ignition of the gas, which could lead to a fire or explosion outside of the storage room, which could lead to harm to persons.

---

## **Provision: 3.3.6.3.(2)**

---

### **Objective**

OP1

### **Attributions**

3.3.6.3.(2)(a) [F03-OP1.2]

### **Intent(s)**

**Intent 1.** To limit the probability that a fire will spread from the storage room to other parts of the building, which could lead to damage to the building.

**Intent 2.** To limit the probability that a fire will spread from other parts of the building to the storage room and involve the gas cylinders, which could lead to the unwanted release of gas, which could lead to the further spread of fire or impairment of firefighting operations, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

3.3.6.3.(2)(a) [F03-OS1.2] [F44-OS1.1]

**Intent(s)**

**Intent 1.** To limit the probability that a fire will spread from the storage room to other parts of the building, which could lead to harm to persons.

**Intent 2.** To limit the probability that a fire will spread from other parts of the building to the storage room and involve the gas cylinders, which could lead to the unwanted release of gas, which could lead to the further spread of fire or impairment of firefighting operations, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

3.3.6.3.(2)(a) [F44-OS1.2, OS1.5, OS1.1] Applies to gas-tight *fire separations*.

**Intent(s)**

**Intent 1.** To limit the probability that a gas leak in the storage room will migrate to other parts of the building, which could lead to:

- the further spread of fire or impairment of firefighting operations, which could lead to harm to persons, including emergency responders, and
- an adverse reaction with incompatible products, which could lead to a fire or explosion outside of the storage room, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

3.3.6.3.(2)(b) [F12-OS1.2] [F01-OS1.1]

**Intent(s)**

**Intent 1.** To facilitate the construction of the following safety features for the gas storage room:

- firefighter access from the outside, and
- exhaust ventilation to the outside.

This is to limit the probability that:

- emergency response operations will be delayed or inefficient, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons, including emergency responders, and
- gases will accumulate, which could lead to their ignition from a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS1

### **Attributions**

3.3.6.3.(2)(c) [F12-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that there will be a delay in:

- controlling a gas leak inside the storage room, or
- removing gas cylinders from the room in the event of a fire in an adjacent part of the building.

This is to limit the probability of a fire or explosion involving the gases, which could lead to harm to persons, including emergency responders.

---

### **Objective**

OS1

### **Attributions**

3.3.6.3.(2)(d) [F44-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that a gas leak in the storage room will migrate to other parts of the building, which could lead to ignition of the gas, which could lead to a fire or explosion outside of the storage room, which could lead to harm to persons.

---

## **Provision: 3.3.6.4.(1)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that a fire involving stored products will spread to other parts of the building, which could lead to harm to persons, including emergency responders.

To limit the probability that activities in other parts of the building will lead to a fire exposure hazard to the stored products, which could lead to harm to persons, including emergency responders.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that a fire involving the stored products will spread to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that activities in other parts of the building will lead to a fire exposure hazard to the stored products, which could lead to damage to the building.

---

### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 4.2.9. of the NFC for requirements regarding fire-resistance ratings of fire separations.

**Provision: 3.3.6.4.(2)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.3]

**Intent(s)**

*Intent 1.* To limit the probability that an internal explosion in a room will lead to critical structural and mechanical damage to a building, which could lead to harm to persons, including emergency responders.

---

**Objective**

OP1

**Attributions**

[F02-OP1.3]

**Intent(s)**

*Intent 1.* To limit the probability that an internal explosion in a room will lead to critical structural and mechanical damage to a building.

---

**Objective**

OH5

**Attributions**

[F44-OH5]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that spilled ammonium nitrate will be absorbed into the floor, which could lead to the seepage of the ammonium nitrate from the flooring material, which could lead to harm to the public.

*Intent 2.* To limit the probability that spilled ammonium nitrate will be absorbed into the floor, which could lead to harm to the public once the contaminated flooring material is disposed of.

---

### **Objective**

OS1

### **Attributions**

[F01-OS1.1] [F02-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that spilled ammonium nitrate will be absorbed into the floor, which could lead to an adverse reaction with the flooring materials or with other dangerous goods that have been absorbed into the floor, which could lead to a fire or explosion, which could lead to harm to persons.

*Intent 2.* To limit the probability that the flooring material will lead to the spread of fire, which could lead to harm to persons.

---

### **Objective**

OS3

### **Attributions**

[F43-OS3.4]

### **Intent(s)**

*Intent 1.* To limit the probability that spilled ammonium nitrate will be absorbed into the floor, which could lead to an adverse reaction with the flooring materials or with other dangerous goods that have been absorbed into the floor, which could lead to harm to persons.

---

## **Provision: 3.3.6.6.(6)**

---

### **Objective**

OS1

### **Attributions**

[F01, F81-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that ammonium nitrate will come into contact with materials with which it is incompatible, which could lead to the decomposition of the ammonium nitrate, which could lead to the ammonium nitrate becoming unstable or reactive, which could lead to a fire or explosion, which could lead to harm to persons.

---

## **Provision: 3.3.6.7.(1)**

---

### **Objective**

OS3

### **Attributions**

[F43-OS3.4]

### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that spilled dangerous goods will be absorbed into the floor, which could lead to an adverse reaction with the floor materials or with other dangerous goods that have been absorbed into the floor, which could lead to harm to persons.

---

### **Objective**

OH5

### **Attributions**

[F44-OH5]

### **Intent(s)**

*Intent 1.* To limit the probability that spilled dangerous goods will be absorbed into the floor, which could lead to the unwanted release of the dangerous goods from the flooring material, which could lead to harm to the public.

*Intent 2.* To limit the probability that spilled dangerous goods will be absorbed into the floor, which could lead to harm to the public.

---

### **Objective**

OS1

### **Attributions**

[F01-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that spilled dangerous goods will be absorbed into the floor, which could lead to an adverse reaction with the floor materials or with other dangerous goods that have been absorbed into the floor, which could lead to their accumulation and subsequent ignition by a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.

---

## **Provision: 3.3.6.8.(1)**

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from this area to other parts of the building, which could lead to damage to the building.

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from this area to other parts of the building, which could lead to harm to persons in the other parts of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.3.6.9.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F01-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that vapour will accumulate in low areas such as basements or pits in sufficient quantity to form an ignitable mixture, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F01-OP1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that vapour will accumulate in low areas such as basements or pits in sufficient quantity to form an ignitable mixture, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building.

### **Provision: 3.4.1.1.(1)**

---

#### **Intent(s)**

*Intent 1.* To state the application of Section 3.4.

### **Provision: 3.4.1.2.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F10, F12, F05, F06-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will not have a choice of an alternative egress route in the case of one route to an exit being blocked or obstructed in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that two alternative access routes to a floor area from exits will be simultaneously blocked or obstructed in an emergency situation, which could lead to emergency responders being delayed in gaining access to a floor area, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F12, F06-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that two alternative access routes to a floor area from exits will be simultaneously blocked or obstructed in a fire situation, which could lead to emergency responders being delayed in gaining access to a floor area, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

[F12, F06-OS1.5, OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that two alternative access routes to a floor area from exits will be simultaneously blocked or obstructed in a fire situation, which could lead to emergency responders being delayed in gaining access to a floor area, which could lead to delays or ineffectiveness in emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Provision: 3.4.1.2.(2)****Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To exempt multiple exits from the requirement of Sentence 3.4.1.2.(1), which requires that all exits be separate, if measures are taken to limit the cumulative capacity of the converging exits.

This is to limit the probability that an excessive portion of the required exiting capacity will consist of converging exits, which could lead to insufficient width in other exits to permit efficient egress in an emergency situation if the converged exit becomes obstructed or inaccessible, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To direct Code users to Sentence 3.4.3.1.(2).

---

**Provision: 3.4.1.3.(1)****Intent(s)**

*Intent 1.* To direct Code users to Section 3.3.

---

**Provision: 3.4.1.4.(1)****Intent(s)**

*Intent 1.* To clarify which types of egress facilities are permitted to be accepted as exits.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.4.1.5.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that differences in elevation between the floor level and the passageway will lead to excessive travel distances to an exterior exit passageway in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.1.6.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will not have a choice of sufficient alternative exterior exit routes in the event that routes to horizontal exits are blocked or obstructed in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.1.6.(2)**

---

#### **Objective**

OS3

#### **Attributions**

[F10, F05-OS3.7]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.1.6.(1) and permit an increase in the ratio of horizontal exits to all exits, on the basis that:

- using normal exit facilities in a hospital or nursing home with treatment is difficult,
- such buildings are fully sprinklered, and
- there are full-time supervisory staff to assist in evacuation.

This is to limit the probability that persons will not have a choice of sufficient alternative exterior exit routes in the event that routes to horizontal exits are blocked or obstructed in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.1.7.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that a person's unwillingness to use, or lack of familiarity with, an exit facility in an emergency situation will lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To allow a slide escape as an additional egress facility if measures are taken to limit the probability of harm to persons using the slide escape in an emergency situation.

**Provision: 3.4.1.8.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Article 3.3.1.19. to glass and transparent panels in exits.

**Provision: 3.4.1.9.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that a reflection in a mirror will confuse persons as to the direction of an exit, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that a reflection in a mirror will confuse persons as to the direction of an exit, which could lead to persons hitting or bumping into the mirror, which could lead to harm to persons.

**Provision: 3.4.1.10.(1)**

---

**Objective**

OS1

**Attributions**

[F05-OS1.2] [F06-OS1.2, OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that glazing will be involved in, or contribute to, the spread of fire within an exit, which could lead to harm to persons using the exit.

*Intent 2.* To limit the probability that glazing will prematurely fail when exposed to fire from outside the exit, which could lead to the spread of fire into the exit, which could lead to harm to persons using the exit, including emergency responders.

---

## **Intent Statements: NBC 2010**

*Intent 3.* To limit the probability that glazing will prematurely fail when exposed to fire from outside the exit, which could lead to the spread of fire into the exit, which could lead to emergency responders being delayed in gaining access to a floor area, which could lead to delays or ineffectiveness in fire emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F03, F06-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that glazing will be involved in, or contribute to, the spread of fire within an exit, which could lead to damage to the building.

*Intent 2.* To limit the probability that glazing will prematurely fail when exposed to fire from outside the exit, which could lead to the spread of fire into the exit, which could lead to emergency responders being delayed in gaining access to a floor area, which could lead to delays or ineffectiveness in fire emergency response operations, which could lead to the further spread of fire, which could lead to damage to the building.

---

## **Provision: 3.4.2.1.(1)**

---

### **Objective**

OS3

### **Attributions**

[F10, F12, F05, F06-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that persons will not have a choice of an alternative exit in the event that one exit is blocked or obstructed in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that emergency responders will not have a choice of an alternative exit in the event that one exit is blocked or obstructed in an emergency situation, which could lead to emergency responders being delayed in gaining access to a floor area, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Objective**

OS1

### **Attributions**

[F12, F06-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not have a choice of an alternative exit in the case of one exit being blocked or obstructed in a fire situation, which could lead to emergency responders being delayed in gaining access to a floor area, which could lead to delays or ineffectiveness

in emergency response operations, which could lead to the spread of fire, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F12, F06-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not have a choice of an alternative exit in the event that one exit is blocked or obstructed in a fire situation, which could lead to emergency responders being delayed in gaining access to a floor area, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

**Provision: 3.4.2.1.(2)**

---

**Intent(s)**

*Intent 1.* To exempt certain floor areas from the requirements of Sentences 3.3.1.3.(9) and 3.4.2.1.(1) concerning multiple exits and allow a single exit on the basis that the floor area served by the exit has a limited occupant load, and a restricted area and travel distance.

---

**Provision: 3.4.2.1.(3)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that differences in elevation between an exterior exit doorway and the adjacent ground level will lead to excessive travel distances in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.4.2.1.(4)**

---

**Intent(s)**

*Intent 1.* To exempt access to exits for dwelling units from the requirements of Sentence 3.4.2.1.(1) or 3.4.2.1.(2), which would otherwise require two exits or one exit, provided some conditions are met, on the basis that:

- occupants are familiar with their egress routes, and
- the dwelling unit design will be constrained in accordance with Sentences 3.3.4.4.(1) to 3.3.4.4.(4), thus limiting the number of occupants.

---

**Provision: 3.4.2.1.(5)**

---

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exclude rooftop enclosures from the application of Sentence 3.4.2.1.(1), which would otherwise require direct access to exits at the roof level, on the basis that:

- the rooftop enclosures will have a limited number of occupants who will occupy the space for limited periods for the purpose of servicing and maintaining equipment within the enclosure, and
- the means of egress from the rooftop complies with Sentences 3.3.1.3.(5) and 3.3.1.3.(6).

*Intent 2.* To direct Code users to Sentences 3.3.1.3.(5) and 3.3.1.3.(6).

---

### **Provision: 3.4.2.2.(1)**

#### **Objective**

OS1

#### **Attributions**

[F05-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that egress routes from a mezzanine will become untenable in a fire situation during the time involved in reaching the exits accessible at mezzanine level, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To clarify that mezzanines are to be provided with exits on the same basis as required for floor areas.

*Intent 3.* In cases where mezzanines are not included in the definition of floor area, this expands the application of Section 3.4. to such mezzanines.

---

### **Provision: 3.4.2.2.(2)**

#### **Intent(s)**

*Intent 1.* To exempt means of egress serving mezzanines from the application of Sentence 3.4.2.2.(1), which would otherwise require exits on the same basis as required for floor areas, on the basis that the mezzanines will be relatively small and will have a limited occupant load and travel distance, allowing the occupants to safely evacuate through the main floor level of the storey containing the mezzanine.

---

### **Provision: 3.4.2.2.(3)**

#### **Intent(s)**

*Intent 1.* To exempt half of the required means of egress from a mezzanine from the requirements of Sentence 3.4.2.2.(1), which would otherwise require exits on the same basis as required for floor areas and not permit that half of the means of egress lead through the room in which the mezzanine is located, if certain conditions are met.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.2.3.(1)**

---

**Objective**

OS1

**Attributions**

[F10, F05-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that exits will be located too close to one another, which could lead to persons not having a choice of an alternative egress route in the event that one route to the exits is blocked or obstructed in a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.2.3.(2)**

---

**Intent(s)**

*Intent 1.* To exempt exits that are in different fire compartments, which are separated from one another by a fire separation, from the distance limits referred to in Clauses 3.4.2.3.(1)(a) and 3.4.2.3.(1)(b), on the basis that occupants will be able to leave the first fire compartment to go to an alternative exit in a fire compartment not exposed to untenable conditions.

**Provision: 3.4.2.3.(3)**

---

**Intent(s)**

*Intent 1.* To define the means of measuring the distance between exits.

**Provision: 3.4.2.4.(1)**

---

**Intent(s)**

*Intent 1.* To define the means of measuring travel distance within a floor area.

**Provision: 3.4.2.4.(2)**

---

**Intent(s)**

*Intent 1.* To exempt travel distance measurement involving a suite or room from the application of Sentence 3.4.2.4.(1), which would otherwise require the measurement from the furthest point in the suite or room, and permit measurement from the egress door of the suite or room, if certain conditions are met.

This is on the basis that the portion of the travel route outside the room or suite is protected from a fire in the rooms or suites leading onto the protected egress route and thus would not be rendered untenable within the time required to achieve occupant safety.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.4.2.4.(3)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of excessive travel distances to an exit in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.2.5.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of excessive travel distances to an exit in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.2.5.(2)**

---

#### **Intent(s)**

*Intent 1.* To exempt floor areas used for high-hazard industrial occupancies from the permission in the latter part of Sentence 3.4.2.5.(2) to space exits around the perimeter of a large building instead of the travel distance limits of Sentence 3.4.2.5.(1), on the basis that the growth of a fire will be so rapid that delays in evacuating are not acceptable, and the 25 m travel distance limit of Clause 3.4.2.5.(1)(a) is necessary.

---

#### **Intent(s)**

*Intent 1.* To exempt exits located around the perimeter of floor areas from the travel distance limits of Sentence 3.4.2.5.(1), on the basis that the exit spacing is limited and each main aisle leads directly to an exit.

This is allowed on the basis that:

- occupants will be able to leave before the space becomes untenable in a fire, and
- emergency responders will be able to enter the building at the exit location and proceed expeditiously by means of the main aisles to problem areas in the building.

### **Provision: 3.4.2.5.(3)**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not be familiar with the location of exits, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

*Intent 2.* To limit the probability that exits will not be readily accessible, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

**Provision: 3.4.2.6.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that persons will be impeded in their exit path of travel should they choose to use the most familiar egress route (i.e. the principal entrance door through which they likely came in) in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.3.1.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Subsection 3.1.17.

**Provision: 3.4.3.1.(2)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that exits will be of insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.3.2.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that exits will be of insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.4.3.2.(2)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that, given the nature of the occupancies, exits will be of insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.3.2.(3)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.3.2.(1) and allow a relaxation in the width of means of egress, on the basis that there is a lower exposure risk to occupants in an exterior environment.

This is to limit the probability that means of egress will be of insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.3.2.(4)**

---

#### **Intent(s)**

*Intent 1.* To exempt an exit stair from the application of Sentence 3.4.3.1.(2) for converging exits, which would otherwise require the exit width to be cumulative, based on the total occupant load of the superimposed storeys served by the exit, on the basis that exits need only be designed for a fire or other untenable conditions occurring on one floor area and the occupants moving from that floor area.

### **Provision: 3.4.3.2.(5)**

---

#### **Intent(s)**

*Intent 1.* To expand the application of Sentence 3.4.3.2.(6).

### **Provision: 3.4.3.2.(6)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To supersede the permission of Sentence 3.4.3.2.(4) not to cumulate exit widths for superimposed floor areas on the basis that all floor areas in an interconnected floor space are subject to exposure from the same fire or other untenable conditions and thus require simultaneous exiting from all floors.

This is to limit the probability that exits will be of insufficient width to permit efficient egress simultaneously from all portions of the interconnected floor space in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Intent(s)**

*Intent 1.* To supersede the requirement in the first part of Sentence 3.4.3.2.(6) that exit width be cumulative on the basis that an intermediate area of safety is provided that allows persons to be protected from the hazards of the interconnected floor space while queuing before entering an exit stair or while waiting to proceed in the exit stair.

---

**Provision: 3.4.3.2.(7)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that an excessive portion of the required exiting capacity will be concentrated at one location, which could lead to insufficient width in other exits to permit efficient egress in an emergency situation if the exit becomes obstructed or inaccessible, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.4.3.2.(8)**

---

**Objective**

OS3

**Attributions**

[F12, F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that exits will be of insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that exits will be of insufficient width, which could lead to emergency responders being delayed in gaining access to floor areas in an emergency situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that ramps or stairs will be of insufficient width, which could lead to congestion, collisions or other risk of injuries, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that exits will be of insufficient width, which could lead to emergency responders being delayed in gaining access to floor areas in a fire situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building or facility.

---

### **Objective**

OS1

[F12-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that exits will be of insufficient width, which could lead to emergency responders being delayed in gaining access to floor areas in a fire situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to harm to persons.

---

## **Provision: 3.4.3.3.(1)**

---

### **Objective**

OS3

### **Attributions**

[F10, F12-OS3.7] [F30-OS3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that obstructions in an exit will reduce the exit width, which could lead to:

- insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- emergency responders being delayed in gaining access to floor areas in an emergency situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that fixtures, turnstiles or construction projecting into, or fixed within, an exit will lead to collision, tripping, falling or other risks of injuries, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F12-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that obstructions in an exit will reduce the exit width, which could lead to emergency responders being delayed in gaining access to floor areas in a fire situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

[F12-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that obstructions in an exit will reduce the exit width, which could lead to emergency responders being delayed in gaining access to floor areas in a fire situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to harm to persons.

---

**Provision: 3.4.3.3.(2)**

---

**Objective**

OS3

**Attributions**

[F10, F12-OS3.7]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentences 3.4.3.2.(8) and 3.4.3.3.(1), and permit a reduction in the width of exits resulting from the swing of swinging doors if the width reduction is limited.

This is to limit the probability that an exit will be substantially reduced in width, which could lead to:

- insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- emergency responders being delayed in gaining access to floor areas in an emergency situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F12-OP1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentences 3.4.3.2.(8) and 3.4.3.3.(1), and permit a reduction in the width of exits resulting from the swing of swinging doors if the width reduction is limited.

This is to limit the probability that an exit will be substantially reduced in width, which could lead to emergency responders being delayed in gaining access to floor areas in a fire situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

[F05-OS1.5] [F06-OS1.5, OS1.2] [F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread into an exit, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that fire will spread into an exit, which could lead to emergency responders being delayed in gaining access to floor areas, which could lead to delays or ineffectiveness in fire emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons including emergency responders, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

*Intent 3.* To limit the probability that fire will spread from one floor area to another floor area by means of an exit, which could lead to harm to persons in the other floor area.

---

**Objective**

OP1

**Attributions**

[F06, F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread into an exit, which could lead to delays or ineffectiveness in fire emergency response operations, which could lead to the further spread of fire, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread from one floor area to another floor area by means of an exit, which could lead to damage to the building.

**Provision: 3.4.4.1.(2)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.4.1.(1) in regard to exit enclosures passing through floor assemblies, which are required by Subsection 3.2.2. to have a 3 h fire-resistance rating, which would otherwise require the exit enclosure to have a fire-resistance rating above 2 h, on the basis that the 2 h fire-resistance rating of the fire separation is considered to provide an adequate level of protection.

**Provision: 3.4.4.1.(3)**

---

**Intent(s)**

*Intent 1.* To expand the application of Sentence 3.4.4.1.(1).

---

## **Intent Statements: NBC 2010**

### **Provision: 3.4.4.2.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F05, F06-OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire that has spread into a lobby from an adjacent floor area will lead to untenable conditions in the exit, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that a fire that has spread into a lobby from an adjacent floor area will lead to untenable conditions in the exit, which could lead to delays or ineffectiveness in fire emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders.

### **Provision: 3.4.4.2.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F12, F10, F05, F06-OS1.5]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.4.1.(1) for a rated fire separation and of Sentence 3.4.4.2.(1) prohibiting exits to lead through lobbies, if certain measures are taken.

This is to limit the probability that:

- excessive height above grade of the lobby will delay fire emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders,
- excessive travel distances through the lobby will lead to delays in evacuating, which could lead to harm to persons, and
- smoke from a fire in a room, premise or interconnected floor space, or a fire in an adjacent occupancy, will spread into the lobby, which could lead to untenable conditions in the exit, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons,
  - harm to persons, and
  - delays or ineffectiveness in fire emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders.

### **Provision: 3.4.4.3.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F05, F06, F10-OS1.5]

**Intent(s)**

*Intent 1.* To exempt exterior exit passageways from the requirements of Sentence 3.4.4.1.(1) for a rated fire separation, and of Sentences 3.2.3.13.(1) and 3.2.3.13.(3) for the protection of openings, if certain measures are taken.

This is to limit the probability that:

- smoke will build up in the exit, which could lead to untenable conditions in the exit, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons,
  - harm to persons, and
  - delays or ineffectiveness in fire emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, and
- persons will not have a choice of an alternative egress route in the case of one route being blocked or obstructed in a fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.4.4.4.(1)****Objective**

OS1

**Attributions**

[F05-OS1.5] [F06-OS1.5, OS1.2] [F03-OS1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of Subsections 3.1.8., Subsection 3.1.9. and 3.2.8., which would otherwise permit openings in exit fire separations, and limit the openings to only certain penetrations, on the basis of maintaining the integrity of exits.

This is to limit the probability that:

- fire will spread into an exit, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons,
- fire will spread into an exit, which could lead to emergency responders being delayed in gaining access to floor areas, which could lead to delays or ineffectiveness in fire emergency response operations, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons including emergency responders, and
  - the spread of fire to other parts of the building, which could lead to harm to persons, and
- fire will spread from one floor area to another floor area by means of an exit, which could lead to harm to persons in the other floor area.

*Intent 1.* To supersede the requirements of Subsections 3.1.8., Subsection 3.1.9. and 3.2.8., which would otherwise permit openings in exit fire separations, and limit the openings to only certain penetrations, on the basis of maintaining the integrity of exits.

This is to limit the probability that fire will spread from one exit to another exit, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- delays or ineffectiveness in fire emergency response operations, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, including emergency responders, and
  - the spread of fire to other parts of the building, which could lead to harm to persons.

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that ice and snow will accumulate on treads and landings of exterior exit stairs, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency, which could lead to harm to persons.

*Intent 2.* To limit the probability that ice and snow will accumulate on treads and landings of exterior exit stairs, which could lead to emergency responders being delayed or ineffective in carrying out their emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that exterior exit stairs will be obstructed or slippery, which could lead to persons tripping, slipping or falling, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F12-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that ice and snow will accumulate on treads and landings of exterior exit stairs, which could lead to emergency responders being delayed or ineffective in carrying out their fire emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

### **Objective**

OS1

### **Attributions**

[F12-OS1.2, OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that ice and snow will accumulate on treads and landings of exterior exit stairs, which could lead to emergency responders being delayed or ineffective in carrying out their fire emergency response operations, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

## **Provision: 3.4.6.2.(1)**

---

### **Objective**

OS3

### **Attributions**

[F30-OS3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that persons will not recognize the presence of steps and a change in elevation, which could lead to persons tripping or falling, which could lead to harm to persons.

**Provision: 3.4.6.3.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that persons using exit stairs in a emergency situation will require a rest, or will develop a psychological fear of falling, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To exempt exit stairs serving Group B, Division 2 occupancies from the requirements in the first part of Sentence 3.4.6.3.(1), which would otherwise permit a vertical rise of the stairs of up to 3.7 m, and limit the rise to not more than 2.4. m, on the basis that:

- occupants may be in a poor state of health and may need to rest more frequently, and
- staff moving patients may require intervals of resting.

**Provision: 3.4.6.3.(2)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability of an inadequate clear surface for users to adjust their gait when entering or exiting a flight of stairs or ramps, or for users to turn to negotiate a doorway in a stairway, which could lead to:

- persons falling, and
- persons falling in an emergency, which could lead to delays in the evacuation or movement of persons to a safe place.

This is to limit the probability of harm to persons.

**Provision: 3.4.6.3.(3)**

---

**Objective**

OS3

**Attributions**

[F10, F12-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To exempt certain stairs or ramps from the application of Article 9.8.6.2. and Sentence 3.4.6.3.(2), which would otherwise require a landing, in situations where an approach to the stair or ramp with a safer configuration is provided.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.4.6.4.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F10, F12-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that landings will be of insufficient size to permit efficient egress in an emergency situation, which could lead to congestion at landings, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that emergency responders will have insufficient space on a landing to perform their duties, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that landings will be of insufficient size for persons to negotiate a change of direction, which could lead to congestion, collisions or other risk of injuries, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F12-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders will have insufficient space on a landing to perform their duties in a fire situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that an inadequate aid to balance, or an inadequate means of arresting falls, will lead to falls, which could lead to harm to persons.

*Intent 2.* To limit the probability that an inadequate aid to balance, or an inadequate means of arresting falls, will lead to inefficient movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.4.6.5.(3)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1] [F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that persons will have difficulty in establishing or maintaining a grip on handrails, which could lead to falls, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons will have difficulty in establishing or maintaining a grip on handrails, which could lead to inefficient movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.4.6.5.(4)**

### **Intent(s)**

*Intent 1.* To define the method of measuring the height of handrails for stairs and ramps.

---

### **Provision: 3.4.6.5.(5)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1] [F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that handrails will be too high or too low for convenient use by the majority of stair and ramp users, which could lead to an:

- inadequate aid to balance or an inadequate means of arresting falls, which could lead to falls, and
- inadequate aid to balance or an inadequate means of arresting falls in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place.

This is to limit the probability of harm to persons.

---

### **Provision: 3.4.6.5.(6)**

### **Intent(s)**

*Intent 1.* To exempt handrails for stairs and ramps from the maximum and minimum height requirements from Sentence 3.4.6.5.(5) on the basis that such handrails are installed in addition to the handrails that already comply with the requirements of Sentence 3.4.6.5.(5).

**Provision: 3.4.6.5.(7)**

---

**Intent(s)**

*Intent 1.* To supersede the maximum height of handrails requirement from Sentence 3.4.6.5.(5) in situations where guards are required and the top of the guards can be used as handrails.

**Provision: 3.4.6.5.(8)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that unexpected discontinuity of handrails will lead to an interruption of the user's hold on the handrail, which could lead to falls, which could lead to harm to persons.

*Intent 2.* To limit the probability that unexpected discontinuity of handrails will lead to an interruption of the user's hold on the handrail, which could lead to inefficient movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.6.5.(9)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that handrail terminations will protrude into pathways or otherwise create a hazard, which could lead to collisions, which could lead to harm to persons.

*Intent 2.* To limit the probability that handrail terminations will protrude into pathways or otherwise create a hazard, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.6.5.(10)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that the absence of a handrail extension at the top and bottom of a stairway or ramp will lead to persons not having positive feedback for determining the top and bottom of the stairway or ramp, which could lead to persons falling, which could lead to harm to persons.

*Intent 2.* To limit the probability that the absence of a handrail extension at the top and bottom of a stairway or ramp will lead to persons not having positive feedback for determining the top and bottom of the stairway or ramp, which could lead to inefficient movement in an emergency situation, which could

---

## **Intent Statements: NBC 2010**

lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Objective**

OA1

### **Attributions**

[F73-OA1]

### **Intent(s)**

*Intent 1.* To limit the probability that the absence of a handrail extension at the top and bottom of a stairway or ramp will lead to persons with a visual disability not having positive feedback for determining the top and bottom of the stairway or ramp, which could impede the circulation of such persons.

---

### **Provision: 3.4.6.5.(11)**

---

### **Objective**

OS3

### **Attributions**

[F30-OS3.1] [F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability of insufficient clearance between a handrail and any surface behind it, which could lead to:

- a person's hand becoming wedged or caught between the handrail and the surface behind it, which could lead to harm to the person, and
- a person not having a secure grip and falling, which could lead to harm to the person.

*Intent 2.* To limit the probability of insufficient clearance between a handrail and any surface behind it, which could lead to:

- a person's hand becoming wedged or caught between the handrail and the surface behind it when using the exit stairway or ramp in an emergency situation, and
- a person not having a secure grip and falling, when using the exit stairway or ramp in an emergency situation.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that an inadequate aid to balance or an inadequate means of arresting falls will lead to a person falling, which could lead to harm to persons.

*Intent 2.* To limit the probability that an inadequate aid to balance or an inadequate means of arresting falls will lead to the inefficient movement of persons in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.4.6.6.(1)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that the absence of walls or guards on the sides of exits will lead to persons falling from a higher level to a lower level, which could lead to harm to persons.

*Intent 2.* To limit the probability that the absence of walls or guards on the sides of exits will inhibit their use in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.4.6.6.(2)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that persons using exit stairs and landings will fall over a guard from a higher level to a lower level, which could lead to harm to persons.

*Intent 2.* To limit the probability that the absence of a high guard for exit stairs and landings will inhibit their use during an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.4.6.6.(3)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1] [F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons using exit ramps and landings will fall over a guard from a higher level to a lower level, which could lead to harm to persons.

*Intent 2.* To limit the probability that the absence of a high guard for exit ramps and landings will inhibit their use during an emergency situation, which could lead to lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.6.6.(4)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1] [F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.6.6.(2) and require a greater minimum height for guards for exterior exit stairs and landings that are more than 10 m above ground level, on the basis that additional protection from falling over the guards is warranted.

This is to limit the probability that:

- persons using exit ramps and landings will fall over a guard from a higher level to a lower level, which could lead to harm to persons, and
- the absence of a high guard for exit ramps and landings will impede its use during an emergency situation, which could lead to lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.6.6.(5)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons [e.g. children] will push their head or body through a guard and fall or become trapped or asphyxiated, which could lead to harm to persons.

### **Provision: 3.4.6.6.(6)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that window glass will fail [break or splinter] if a person hits or bumps into it, which could lead to:

- harm to the person, and
- the person falling through the window, which could lead to harm to the person.

*Intent 2.* To limit the probability that a person will fall through a window opening, which could lead to harm to persons.

*Intent 3.* To expand the application of Articles 4.1.5.14. and 4.1.5.16. to a window.

**Provision: 3.4.6.6.(7)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that persons will climb a guard and fall, which could lead to harm to persons.

**Provision: 3.4.6.7.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that a steeply sloped ramp will delay the movement of persons in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that a steeply sloped ramp will lead to persons tripping or falling, which could lead to harm to persons.

**Provision: 3.4.6.8.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that steps for stairs will be designed with an insufficient run dimension, which could lead to difficulties in movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that steps for stairs will be designed with an insufficient run dimension, which could lead to persons tripping or falling, which could lead to harm to persons.

---

### **Provision: 3.4.6.8.(2)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that steps for stairs will be designed with an improper rise dimension [i.e. rise is too high or too low], which could lead to difficulties in movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that steps for stairs will be designed with an improper rise dimension [i.e. rise is too high or too low], which could lead to persons tripping or falling, which could lead to harm to persons.

### **Provision: 3.4.6.8.(3)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that risers in any one flight of stairs will be designed with different dimensions [i.e. nonuniform rise dimensions], which could lead to difficulties in movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that risers in any one flight of stairs will be designed with different dimensions [i.e. nonuniform rise dimensions], which could lead to persons tripping or falling, which could lead to harm to persons.

### **Provision: 3.4.6.8.(4)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1] [F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that treads in any one flight of stairs will be designed with different dimensions [i.e. nonuniform run dimensions], which could lead to difficulties in movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that treads in any one flight of stairs will be designed with different dimensions [i.e. nonuniform run dimensions], which could lead to persons tripping or falling, which could lead to harm to persons.

**Provision: 3.4.6.8.(5)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that treads and risers will be designed with different dimensions [i.e. nonuniform run and rise dimensions], which could lead to difficulties in movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that treads and risers will be designed with different dimensions [i.e. nonuniform run and rise dimensions], which could lead to persons tripping or falling, which could lead to harm to persons.

**Provision: 3.4.6.8.(6)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that excessive variance in the configuration of a flight of stairs will disrupt the gait of users or force them to switch to the other side of the stair, which could lead to difficulties in movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that excessive variance in the configuration of a flight of stairs will disrupt the gait of users or force them to switch to the other side of the stair, which could lead to persons tripping or falling, which could lead to harm to persons.

**Provision: 3.4.6.8.(7)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that an excessive cross-slope of treads or landings will lead to difficulties in movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that an excessive cross-slope of treads or landings will lead to persons tripping or falling, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.4.6.8.(8)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person tripping and falling against the nosing of a stair tread will be harmed.

*Intent 2.* To limit the probability that persons using the stairway will catch their heel or toe on the nosing of a stair tread, which could lead to persons tripping or falling, which could lead to harm to persons.

---

### **Provision: 3.4.6.8.(9)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons using stairs will have difficulty in securely placing their feet on the steps, which could lead to difficulties in movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons using stairs will have difficulty in securely placing their feet on the steps, which could lead to persons tripping or falling, which could lead to harm to persons.

---

### **Provision: 3.4.6.8.(10)**

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To supersede the requirements stated in Sentence 3.4.6.8.(8), which would otherwise require a minimum edge of 6 mm and permit a minimum edge of 3 mm, if certain conditions are met.

---

### **Provision: 3.4.6.9.(1)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons using stairs will have difficulty in securely placing their feet on the steps, which could lead to difficulties in movement in an emergency situation, which could

---

## **Intent Statements: NBC 2010**

lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons using stairs will have difficulty in securely placing their feet on the steps, which could lead to persons tripping or falling, which could lead to harm to persons.

---

### **Provision: 3.4.6.9.(2)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To exempt curved stairs from the prohibition in Sentence 3.4.6.9.(1) regarding tapered treads, if certain measures are taken.

This is to limit the probability that:

- handrails on each side of the stairs will not be provided,
- treads in the steps will be improperly designed with respect to uniformity, run dimension and leading edge, and
- the inside radius of the stairs will be of insufficient dimension.

This is to limit the probability of:

- delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons, and
- persons tripping or falling, which could lead to harm to persons.

---

### **Provision: 3.4.6.10.(1)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that floor areas on each side of a horizontal exit will have insufficient occupant capacity to accommodate the occupants of both floor areas in an emergency situation, which could lead to persons in one floor area that are experiencing hazardous conditions being unable to transfer into the other floor area, which could lead to harm to persons.

---

### **Provision: 3.4.6.10.(2)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that vestibules, enclosed balconies or bridges that are used as parts of a horizontal exit will be of insufficient width to permit efficient egress in an emergency situation, which

---

## **Intent Statements: NBC 2010**

could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To supersede the requirement for a minimum clear width in the first part of Sentence 3.4.6.10.(2) and permit the projection of handrails into this clear width, if the projection of the handrails is limited.

---

### **Provision: 3.4.6.10.(3)**

#### **Intent(s)**

*Intent 1.* To expand the application of Sentence 3.4.6.7.(1).

---

### **Provision: 3.4.6.10.(4)**

#### **Objective**

OS3

#### **Attributions**

[F10, F73-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons moving through a horizontal exit in an emergency situation will have difficulties in their movement, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device, or having other mobility limitations, will be unable to move through a horizontal exit in an emergency situation without assistance from another person, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.4.6.10.(5)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of delays in opening a door in a horizontal exit that does not open in the direction of travel in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that a door in a horizontal exit that does not open in the direction of travel will be difficult to open in an emergency situation if several persons approach it at the same time and the pressure of the group prevents the first person from pulling the door towards them, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that a person falling in front of a door in a horizontal exit that does not open in the direction of travel in an emergency situation will obstruct the opening of the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 4.* To limit the probability that persons will not be familiar with the direction of swing of doors in a horizontal exit, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.6.10.(6)**

---

**Intent(s)**

*Intent 1.* To expand the application of Article 3.2.3.19.

**Provision: 3.4.6.11.(1)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that a person on the stairs near the door will be hit by the door when it is opened, which could lead to harm to the person.

*Intent 2.* To limit the probability that a person will step through the door down onto a step, which could lead to the person falling, which could lead to harm to the person.

*Intent 3.* To limit the probability that a person will step through the door down onto a step in an emergency situation, which could lead to the person falling or obstructing other persons using the exit, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 4.* To limit the probability that there will not be enough space on the landing to stand while opening the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.6.11.(2)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7] Applies to portion of Code text: “No *exit* door shall open directly onto a step ...”

**Intent(s)**

*Intent 1.* To limit the probability that a person will step through the door down onto a step, which could lead to the person falling, which could lead to harm to the person.

*Intent 2.* To limit the probability that a person will step through the door down onto a step in an emergency situation, which could lead to the person falling or obstructing other persons using the exit, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Objective**

OS3

**Attributions**

[F81, F10-OS3.7] Applies where there is a danger of blockage from ice or snow.

**Intent(s)**

*Intent 1.* To supersede the requirements in the first part of Sentence 3.4.6.11.(2) prohibiting exit doors from opening onto a step, on the basis that a step of limited height will minimize the danger of door blockage from ice or snow without creating an undue risk of injury or delay.

---

## **Intent Statements: NBC 2010**

This is to limit the probability that an accumulation of ice or snow outside the door will block the door, which could lead to persons being unable to leave the building in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.4.6.11.(3)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will not be familiar with the location of exit doors, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

---

### **Provision: 3.4.6.11.(4)**

#### **Objective**

OS3

#### **Attributions**

[F10, F12-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that exit door leaf openings will be of insufficient size to permit efficient evacuation or movement to a safe place in an emergency situation, which could lead to congestion at the door openings, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that exit door leaf openings will be of insufficient size, which could lead to emergency responders being delayed in gaining access to floor areas in an emergency situation, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.4.6.12.(1)**

#### **Intent(s)**

*Intent 1.* To exclude a door serving a single dwelling unit from the need to swing in the direction of exit travel, as stated in the latter part of Sentence 3.4.6.12.(1), on the basis that the occupants are familiar with the type and operation of the door swing, and the number of occupants is expected to be limited.

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of delays in opening an exit door that does not open in the direction of travel in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that an exit door that does not open in the direction of travel will be difficult to open in an emergency situation if several persons approach it at the same time and the pressure of the group prevents the first person from pulling the door towards them, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that a person falling in front of an exit door that does not open in the direction of travel in an emergency situation will obstruct the opening of the door, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 4.* To limit the probability of delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

#### **Attributions**

3.4.6.15.(1)(b) [F10, F12-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that:

- persons will not have a choice of an alternative exit doorway in the case of the revolving doorway being blocked or obstructed in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons,
- alternative exit doorway openings will be of insufficient size to permit efficient evacuation or movement to a safe place in an emergency situation, which could lead to congestion at the doorway openings, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and

- congestion will occur at the alternative doorway openings, which could lead to emergency responders being delayed in gaining access to floor areas, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

3.4.6.15.(1)(c) [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that, in an emergency situation, the use of a revolving exit door located in the upper storeys of a building will lead to congestion or the buildup of persons at the doorway, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

3.4.6.15.(1)(d) [F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that, in an emergency situation, the use of a revolving exit door located at the foot of an exit stairway will lead to congestion or the buildup of persons at the doorway, which could lead to:

- persons being crushed, which could lead to harm to persons, and
- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

3.4.6.15.(1)(e) [F20-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that glass used in the construction of doors will not meet proper standards, which could lead to the glass not performing in the way intended in a normal use situation, which could lead to failure of the glass [e.g. breaking or splintering], which could lead to harm to persons.

---

**Provision: 3.4.6.15.(2)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentences 3.4.3.2.(1) to 3.4.3.2.(3) by limiting the exiting capacity of revolving doorways on the basis that these doors cause delays, slowdown, etc.

---

## **Intent Statements: NBC 2010**

This is to limit the probability that exits will be of insufficient width to permit efficient egress in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.4.6.15.(3)**

#### **Objective**

OS3

#### **Attributions**

3.4.6.15.(3)(a), 3.4.6.15.(3)(b), 3.4.6.15.(3)(d), 3.4.6.15.(3)(e) [F10, F81-OS3.7] [F20, F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.6.15.(1), which would otherwise require certain measures, and permit electrically powered revolving doors if certain conditions are met.

This is to limit the probability that:

- [Clauses 3.4.6.15.(3)(a) et 3.4.6.15.(3)(b)] use of the doorway in an emergency situation will lead to congestion or the buildup of persons at the doorway, which could lead to:
  - persons being crushed, which could lead to harm to persons, and
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons,
- [Clause 3.4.6.15.(3)(d)] persons will not be familiar with the method of door opening in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- [Clause 3.4.6.15.(3)(e)] glass used in the construction of the doors will not meet proper standards, which could lead to the glass not performing in the way intended in a normal use situation, which could lead to failure of the glass [e.g. breaking or splintering], which could lead to harm to persons.

---

#### **Attributions**

3.4.6.15.(3)(c)

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.6.15.(2), which would otherwise limit exiting capacity, and permit the exiting capacity of electrically powered revolving doors to be calculated using factors in Sentence 3.4.3.2.(1) based on the clear width of passage through the door enclosure when the doors are fully collapsed.

---

### **Provision: 3.4.6.16.(1)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability of delays in opening principal entrance doors and exit doors in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To expand the application of Sentences 3.3.1.13.(6) to 3.3.1.13.(8).

**Provision: 3.4.6.16.(2)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability of delays in opening exit doors in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.6.16.(3)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability of delays in opening exit doors in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.6.16.(4)**

---

**Objective**

OS3

**Attributions**

[F10, F81-OS3.7]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.6.16.(1), which would otherwise not permit the use of locking devices, and permit electromagnetic locks on exit doors if certain conditions are met.

This is to limit the probability that:

- exit doors will not be readily openable in an emergency situation,
- persons will be unable to release the locking mechanisms on exit doors in an emergency situation, and
- persons will not be familiar with procedures for unlocking exit doors in an emergency situation.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

**Provision: 3.4.6.16.(5)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that persons will be unable to reach or properly operate door hardware, which could lead to delays in opening doors in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Objective**

OA1

### **Attributions**

[F73-OA1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will be unable to reach or properly operate door hardware, which could lead to the person not being able to circulate within a building without the assistance of another person.

---

## **Provision: 3.4.6.17.(1)**

---

### **Objective**

OS1

### **Attributions**

[F02-OS1.2] Applies to *sprinklered buildings*.

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.6.16.(1), which would otherwise require doors to be readily openable, and permit exit and egress doors in certain floor areas to be locked if certain conditions are met [the building is sprinklered throughout].

This is to limit the probability that a fire involving the floor area will spread, which could lead to harm to persons who are locked in the floor area.

---

### **Objective**

OS3

### **Attributions**

[F10, F81-OS3.7] Applies to *exit* and egress doors that comply with the stated Sentences.

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.6.16.(1), which would otherwise require doors to be readily openable, and permit exit and egress doors in certain floor areas to be locked if certain conditions are met [the exit and egress doors comply with Sentences 3.4.6.17.(2) to 3.4.6.17.(9)].

This is to limit the probability that:

- the public will be locked in the floor area, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to the public,
- egress and exit doors will not be readily openable in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons,
- persons will not be familiar with the location of emergency exits, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons, and

- travel distances to an exit door will be excessive, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

*Intent 2.* To state the application of Sentences 3.4.6.17.(2) to 3.4.6.17.(9).

---

**Provision: 3.4.6.17.(2)**

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability of delays in opening exit and egress doors in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.4.6.17.(3)**

**Objective**

OS3

**Attributions**

[F81-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that persons will not be familiar with exit and egress door locking procedures, which could lead to the doors being locked at a time when the public is present, which could lead to delays in opening the doors in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.4.6.17.(4)**

**Intent(s)**

*Intent 1.* To state the application of Sentences 3.4.6.17.(5) à 3.4.6.17.(9).

---

**Provision: 3.4.6.17.(5)**

**Objective**

OS1

**Attributions**

[F10-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that exit and egress door release hardware will not operate immediately or that doors will not be readily operable in a fire emergency, which could lead to delays in opening exit and egress doors, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.4.6.17.(6)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will not be familiar with the location of readily openable emergency exits, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.4.6.17.(7)**

#### **Intent(s)**

*Intent 1.* To clarify that, in determining the aggregate width of exit and egress facilities required for the evacuation of persons other than the public, the width need only be based on the maximum number of persons other than the public.

*Intent 2.* To direct Code users to Articles 3.4.3.1., Article 3.4.3.2. and 3.4.3.3. to determine exit capacity.

---

### **Provision: 3.4.6.17.(8)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 3.4.2.

---

### **Provision: 3.4.6.17.(9)**

#### **Objective**

OS3

#### **Attributions**

[F10, F81-OS3.7]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.4.6.17.(5) that doors be readily openable and permit locked doors if certain measures are taken.

This is to limit the probability that persons will be trapped in a floor area in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Provision: 3.4.6.18.(1)**

#### **Objective**

OS3

#### **Attributions**

3.4.6.18.(1)(a), 3.4.6.18.(1)(b) [F10-OS3.7]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that persons using an exit stair in an emergency situation and encountering obstructions or hazardous conditions will not be able to leave the exit and gain access to a floor area, which could lead to harm to persons.

*Intent 2.* To limit the probability that persons using an exit stair in an emergency situation and encountering obstructions or hazardous conditions will not be familiar with which floor areas are accessible, which could lead to delays in leaving the exit and gaining access to a floor area, which could lead to harm to persons.

---

### **Objective**

OS3

### **Attributions**

3.4.6.18.(1)(c) [F12-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that a means to unlock exit doors from the exit stairs will not be available to emergency responders in an emergency situation, which could lead to delays in gaining access to floor areas, which could lead to emergency response operations being delayed or ineffective, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

3.4.6.18.(1)(c) [F12-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that a means to unlock exit doors from the exit stairs will not be available to emergency responders in an emergency situation, which could lead to delays in gaining access to floor areas, which could lead to emergency response operations being delayed or ineffective, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

### **Objective**

OS1

### **Attributions**

3.4.6.18.(1)(c) [F12-OS1.2, OS1.5]

### **Intent(s)**

*Intent 1.* To limit the probability that a means to unlock exit doors from exit stairs will not be available to emergency responders in an emergency situation, which could lead to delays in gaining access to floor areas, which could lead to emergency response operations being delayed or ineffective, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the spread of fire to other parts of the building, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.4.6.18.(2)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons gaining access to a floor area from an exit will be unable to gain access to an alternative exit, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.6.19.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F10, F12, F73-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons using exits will not be familiar with assigned floor numbers, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that emergency responders using exits in an emergency situation will not be familiar with assigned floor numbers, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To limit the probability that a person with a visual impairment [or disability] will be unable to determine the floor number by reason of being unable to feel raised numbers, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons with a visual impairment [or disability] using exits will not be familiar with assigned floor numbers, which could lead to the persons not being able to circulate within a building without the assistance of another person.

---

#### **Objective**

OP1

#### **Attributions**

[F12-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that emergency responders using exits in a fire situation will not be familiar with assigned floor numbers, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

[F12-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders using exits in a fire situation will not be familiar with assigned floor numbers, which could lead to delays or ineffectiveness in emergency response operations, which could lead to the spread of fire, which could lead to harm to persons.

---

**Provision: 3.4.7.1.(1)**

---

**Objective**

OS3

**Attributions**

[F10, F12-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that an exterior exit facility not fully complying with Subsections 3.4.1. to 3.4.6. will be used, which could lead to:

- delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons, and
- delays by emergency responders in gaining access to floor areas in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.4.7.1.(2)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To supersede the prohibition on the use of fire escapes stated in Sentence 3.4.7.1.(1) on the basis that their use is limited to buildings under a certain height [number of storeys], if certain conditions are met [fire escapes conform to Articles 3.4.7.2. to 3.4.7.7.].

This is to limit the probability that the inadequate design of fire escapes will lead to:

- delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons, or
- tripping or falling, which could lead to harm to persons.

*Intent 2.* To state the application of Articles 3.4.7.2. to 3.4.7.7.

---

**Objective**

OS1

**Attributions**

[F10-OS1.5] [F12-OS1.2]

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To supersede the prohibition on the use of fire escapes stated in Sentence 3.4.7.1.(1) on the basis that their use is limited to buildings under a certain height [number of storeys], if certain conditions are met [fire escapes conform to Articles 3.4.7.2. to 3.4.7.7.].

This is to limit the probability that the inadequate design of fire escapes will lead to:

- delays in the evacuation or movement of persons to a safe place in a fire emergency situation, which could lead to harm to persons, or
- emergency responders being delayed or ineffective in carrying out their emergency response operations, which could lead to the spread of fire, which could lead to harm to persons.

*Intent 2.* To state the application of Articles 3.4.7.2. to 3.4.7.7.

---

### **Provision: 3.4.7.2.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F05-OS1.5] [F06-OS1.2] Applies to the combustibility of materials used in the construction of fire escapes.

#### **Intent(s)**

*Intent 1.* To limit the probability that materials used to construct fire escapes will fail prematurely when exposed to fire, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that materials used to construct fire escapes will fail prematurely when exposed to fire, which could lead to emergency responders being delayed or ineffective in carrying out their emergency response operations, which could lead to the spread of fire, which could lead to harm to persons.

---

#### **Objective**

OS3

#### **Attributions**

[F10, F12-OS3.7] [F20-OS3.1] Applies to the type and construction of fire escapes.

#### **Intent(s)**

*Intent 1.* To limit the probability that fire escapes will be of a stair type not extending to ground level, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

*Intent 2.* To limit the probability that fire escapes will be of a stair type not extending to ground level, which could lead to emergency responders being delayed in gaining access to fire escapes in an emergency situation, which could lead to emergency responders being delayed or ineffective in carrying out their emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1] Applies to the type and construction of fire escapes.

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire escape will not be strong or stable enough to support persons or emergency responders using it in an emergency situation, which could lead to the structural failure of the fire escape, which could lead to harm to persons, including emergency responders.

---

**Provision: 3.4.7.3.(1)****Objective**

OS3

**Attributions**

[F10-OS3.7] Applies to portion of Code text: "Access to fire escapes shall be from corridors through doors at floor level ..."

**Intent(s)**

*Intent 1.* To limit the probability of delays in gaining access to fire escapes from floor areas in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Intent(s)**

*Intent 1.* To exempt casement windows in dwelling units from the requirement in the first part of Sentence 3.4.7.3.(1) that access to a fire escape is required to be through a door, on the basis that the occupants should be familiar with the method of operating the window and gaining access to the fire escape.

---

**Provision: 3.4.7.3.(2)****Objective**

OS3

**Attributions**

[F30-OS3.1] [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that fire escape balconies onto which a door opens will be of insufficient size [area] for a person to safely step on to when evacuating the building in an emergency situation, which could lead to tripping or falling, which could lead to harm to persons.

*Intent 2.* To limit the probability that fire escape balconies will be of insufficient size to permit efficient egress in an emergency situation, which could lead to congestion at the balconies, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

**Provision: 3.4.7.4.(1)****Objective**

OS1

**Attributions**

[F05, F06-OS1.5]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a floor area through openings in exterior walls to a fire escape, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

*Intent 2.* To limit the probability that fire will spread from a floor area through openings in exterior walls to a fire escape, which could lead to delays or ineffectiveness in emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 3.* To expand the application of Subsection 3.1.8. [specifically Sentence 3.1.8.1.(2)] to openings in exterior walls located in zones described in Sentence 3.4.7.4.(2).

---

### **Provision: 3.4.7.4.(2)**

#### **Intent(s)**

*Intent 1.* To state the application of Sentence 3.4.7.4.(1) and to define the zone within which openings near a fire escape need protection against the spread of fire.

---

### **Provision: 3.4.7.5.(1)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Article 3.4.6.8., and permit a different stair design and step dimension, on the basis that fire escapes are not frequently used, and certain conditions are met with respect to the stair design and step dimensions.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

---

### **Provision: 3.4.7.5.(2)**

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Article 3.4.3.4. and permit smaller headroom clearances, on the basis that fire escapes are not frequently used and certain conditions are met with respect to the headroom clearances.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

---

### **Provision: 3.4.7.5.(3)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Articles 3.4.3.1. to 3.4.3.3.

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] Applies to the reduction in width permitted under certain conditions.

**Intent(s)**

*Intent 1.* To exempt fire escapes from the width requirements of Article 3.4.3.1. to 3.4.3.3. and permit a reduction in width on the basis that the fire escapes:

- are limited to buildings under a certain number of storeys [height], and
- serve a limited number of persons.

This is to limit the probability of delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

---

**Provision: 3.4.7.5.(4)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability of difficulty in reaching the ground level from a fire escape in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability of difficulty in reaching the ground level from a fire escape in an emergency situation, which could lead to persons jumping to the ground level, which could lead to harm to persons.

---

**Provision: 3.4.7.6.(1)**

---

**Objective**

OS3

**Attributions**

[F10-OS3.7] [F30-OS3.1]

**Intent(s)**

*Intent 1.* To exempt guards protecting fire escape platforms, balconies and stairways from the requirements of Sentence 3.4.6.6.(2) and permit a lower minimum guard height, on the basis that the fire escapes will be used infrequently.

This [the minimum guard height] is to limit the probability that:

- persons using the fire escape will fall over the guard from a higher level to a lower level, which could lead to harm to persons, and
- the absence of a high guard will inhibit the use of the fire escape during an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.4.7.6.(2)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To clarify that the top rail of a guard is permitted to serve as a handrail if certain conditions are met.

This is to limit the probability that persons using the fire escape in an emergency situation will lose hold of the guard, which could lead to persons tripping or falling, which could lead to:

- delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- harm to persons.

### **Provision: 3.4.7.6.(3)**

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7] [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that an inadequate aid to balance or an inadequate means of arresting falls will lead to falls, which could lead to harm to persons.

*Intent 2.* To limit the probability that an inadequate aid to balance or an inadequate means of arresting falls will lead to inefficient movement in an emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

### **Provision: 3.4.7.6.(4)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons [e.g. children] will push their head or body through a guard and fall or become trapped or asphyxiated, which could lead to harm to persons.

### **Provision: 3.4.7.6.(5)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that persons will climb a guard and fall, which could lead to harm to persons.

**Provision: 3.4.7.7.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Article 3.4.6.3.

**Provision: 3.5.1.1.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Section 3.5.

**Provision: 3.5.1.1.(2)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Articles 3.2.6.4. to 3.2.6.6.

**Provision: 3.5.2.1.(1)**

---

**Objective**

OS3

**Attributions**

[F30, F81-OS3.1] [F32, F81-OS3.3] [F36, F81-OS3.6]

**Intent(s)**

*Intent 1.* To limit the probability that elevators, escalators and dumbwaiters will not meet proper standards, which could lead to elevators, escalators and dumbwaiters not performing as intended, which could lead to safety hazards, which could lead to harm to persons.

**Provision: 3.5.2.1.(2)**

---

**Objective**

OS3

**Attributions**

[F82-OS3.1, OS3.3, OS3.6]

**Intent(s)**

*Intent 1.* To limit the probability that deficiencies in elevator, escalator or dumbwaiter installations, including safety and control devices, will go unnoticed, which could lead to elevators, escalators or dumbwaiters not operating as originally intended, which could lead to safety hazards, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.5.2.1.(3)**

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will be unable to access and use elevators without the assistance of another person.

*Intent 2.* To make Appendix E of CSA B44, "Safety Code for Elevators," mandatory for the design of all passenger elevators.

### **Provision: 3.5.3.1.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire in an elevator hoistway or storey will spread to another storey by means of the hoistway, which could lead to harm to persons in the other storey.

*Intent 2.* To limit the probability that a fire will spread from a storey into an elevator hoistway, which could lead to harm to persons in an elevator car in the hoistway.

*Intent 3.* To supersede the fire separation requirements for vertical service spaces stated in Sentence 3.6.3.1.(1).

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire in an elevator hoistway or storey will spread to another storey by means of the hoistway, which could lead to damage to the building.

*Intent 2.* To limit the probability that a fire will spread from a storey into an elevator hoistway, which could lead to damage to the building.

*Intent 3.* To supersede the fire separation requirements for vertical service spaces stated in Sentence 3.6.3.1.(1).

### **Provision: 3.5.3.1.(2)**

---

#### **Intent(s)**

*Intent 1.* To exempt passenger elevators in interconnected floor spaces from the requirements of Sentence 3.5.3.1.(1) if certain conditions are met.

**Provision: 3.5.3.2.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire in a vertical service space containing a dumbwaiter, or fire in a storey, will spread to another storey by means of the vertical service space, which could lead to harm to persons in the other storey.

*Intent 2.* To supersede the fire separation requirements for vertical service spaces stated in Sentence 3.6.3.1.(1).

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire in a vertical service space containing a dumbwaiter, or fire in a storey, will spread to another storey by means of the vertical service space, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread from a storey into a vertical service space containing a dumbwaiter, which could lead to damage to the building.

*Intent 3.* To supersede the fire separation requirements for vertical service spaces stated in Sentence 3.6.3.1.(1).

**Provision: 3.5.3.3.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from rooms containing elevator machinery to other parts of the building, which could lead to harm to persons in the other parts of the building.

*Intent 2.* To limit the probability that fire will spread from other parts of the building into a room containing elevator machinery, which could lead to the failure of the elevator machinery, which could lead to harm to persons in elevator cars.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that fire will spread from rooms containing elevator machinery to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that fire will spread from other parts of the building into a room containing elevator machinery, which could lead to damage to the building.

---

### **Provision: 3.5.3.3.(2)**

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.5.3.3.(1), which would otherwise require a room containing elevator machinery to be separated from the elevator hoistway by a fire separation, and waive such separation if certain conditions are met [the room and the hoistway are separated from all other parts of the building].

This is to limit the probability that:

- a fire involving the room and hoistway will spread to other parts of the building, which could lead to harm to persons in other parts of the building, and
- a fire will spread from other parts of the building into the room and hoistway, which could lead to:
  - harm to persons in elevator cars in the hoistway, and
  - the failure of the elevator machinery, which could lead to harm to persons in elevator cars.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.5.3.3.(1), which would otherwise require a room containing elevator machinery to be separated from the elevator hoistway by a fire separation, and waive such separation if certain conditions are met [the room and the hoistway are separated from all other parts of the building].

This is to limit the probability that:

- a fire involving the room and hoistway will spread to other parts of the building, which could lead to damage to the building, and
- a fire will spread from other parts of the building into the room and hoistway, which could lead to damage to the building.

---

### **Provision: 3.5.4.1.(1)**

#### **Objective**

OS3

#### **Attributions**

[F12-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that an elevator will not be of sufficient size to accommodate a person in a stretcher in a prone position, which could lead to delays in providing medical services to the person, which could lead to harm to the person.

**Provision: 3.5.4.1.(2)**

---

**Objective**

OS3

**Attributions**

[F12-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that emergency responders will not be familiar with an elevator that is suitable for stretchers, which could lead to delays in providing medical services to the person, which could lead to harm to the person.

**Provision: 3.5.4.2.(1)**

---

**Objective**

OA1

**Attributions**

[F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that persons with a visual impairment [or disability] using elevators will not be familiar with assigned floor numbers, which could lead to the persons not being able to circulate within a building without the assistance of another person.

*Intent 2.* To make Appendix E of CSA B44, "Safety Code for Elevators," mandatory for the design of elevators that are required to be barrier-free.

**Provision: 3.6.1.1.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Section 3.6.

**Provision: 3.6.1.2.(1)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.1] [F02, F03-OS1.2] [F81-OS1.4]

**Intent(s)**

*Intent 1.* To limit the probability that the installation of electrical wiring and electrical equipment will not meet proper standards, which could lead to fire hazards, which could lead to the start and spread of fire, which could lead to harm to persons.

*Intent 2.* To limit the probability that the installation of electrical wiring and electrical equipment will not meet proper standards, which could lead to electrical equipment associated with fire safety systems not performing as intended in a fire situation, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP1

### **Attributions**

[F01-OP1.1] [F02, F03-OP1.2] [F81-OP1.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the installation of electrical wiring and electrical equipment will not meet proper standards, which could lead to fire hazards, which could lead to the start and spread of fire, which could lead to damage to the building.

*Intent 2.* To limit the probability that the installation of electrical wiring and electrical equipment will not meet proper standards, which could lead to electrical equipment associated with fire safety systems not performing as intended in a fire situation, which could lead to the spread of fire, which could lead to damage to the building.

---

### **Objective**

OS3

### **Attributions**

[F32-OS3.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the installation of electrical wiring and electrical equipment will not meet proper standards, which could lead to safety hazards [e.g. electrocution], which could lead to harm to persons.

---

### **Provision: 3.6.1.3.(1)**

---

### **Objective**

OS1

### **Attributions**

[F01-OS1.1] [F02-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that the use of service spaces for storage will create a fire hazard, which could lead to the start and spread of fire, which could lead to harm to persons.

---

### **Provision: 3.6.1.4.(1)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that a fire involving fuel-fired appliances outside a building will spread into the building through unprotected wall openings, which could lead to harm to persons inside the building.

*Intent 2.* To limit the probability that a fire involving fuel-fired appliances outside a building will spread to an adjacent building, which could lead to harm to persons in the adjacent building.

*Intent 3.* To make Appendix Appendix D Division A [specifically ] applicable with respect to wired glass assemblies.

---

**Objective**

OP1

**Attributions**

3.6.1.4.(1)(b) [F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire involving fuel-fired appliances outside a building will spread into the building through unprotected wall openings, which could lead to damage to the building.

---

**Objective**

OP3

**Attributions**

3.6.1.4.(1)(a) [F03-OP3.1]

**Intent(s)**

*Intent 1.* To limit the probability that a fire involving fuel-fired appliances outside a building will spread to an adjacent building, which could lead to damage to the adjacent building.

---

**Provision: 3.6.2.1.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2, OS1.4]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a service room containing a fuel-fired appliance to other parts of the building, which could lead to harm to persons in the other parts of the building.

*Intent 2.* To limit the probability that a fire originating in a location outside a service room will spread into the service room, which could lead to disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2, OP1.4]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a service room containing a fuel-fired appliance to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that a fire originating in a location outside a service room will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.6.2.1.(2)**

---

#### **Intent(s)**

*Intent 1.* To exempt a fuel-fired appliance that doesn't use a liquid with a low flash point and that serves not more than one room or suite from the requirements of Sentence 3.6.2.1.(1), which would otherwise require the appliance to be located in a service room that is separated from the remainder of the building, on the basis that the risk of fire is minimized.

### **Provision: 3.6.2.1.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F01-OS1.1] [F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.6.2.1.(1), which would otherwise permit solid-fuel-fired appliances under certain conditions, and to impose additional requirements on the installation of solid-fuel-fired appliances in certain locations, on the basis that vapours or gases in such locations could be ignited by the appliance [ignition source], which could lead to a fire or explosion, which could lead to harm to persons.

*Intent 2.* To limit the probability that a fire will spread from a service room containing a solid-fuel-fired appliance to other parts of the building, which could lead to harm to persons in the other parts of the building.

---

#### **Objective**

OP1

#### **Attributions**

[F01-OP1.1] [F03-OP1.2]

*Intent 1.* To supersede the requirements of Sentence 3.6.2.1.(1), which would otherwise permit solid-fuel-fired appliances under certain conditions, and to impose additional requirements on the installation of solid-fuel-fired appliances in certain locations, on the basis that vapours or gases in such locations could be ignited by the appliance [ignition source], which could lead to a fire or explosion, which could lead to damage to the building.

*Intent 2.* To limit the probability that a fire will spread from a service room containing a solid-fuel-fired appliance to other parts of the building, which could lead to damage the other parts of the building.

### **Provision: 3.6.2.1.(4)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2, OS1.4]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To supersede the requirements of Sentence 3.6.2.1.(7), which would otherwise require a minimum 1 h fire separation, and require a higher minimum rated separation, on the basis that there is a higher risk of fire or explosion where there is an incinerator.

*Intent 2.* To limit the probability that a fire will spread from a service room containing an incinerator to other parts of the building, which could lead to harm to persons in the other parts of the building.

*Intent 3.* To limit the probability that a fire originating in a location outside a service room containing an incinerator will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2, OP1.4]

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.6.2.1.(7), which would otherwise require a minimum 1 h fire separation, and require a higher minimum rated separation, on the basis that there is a higher risk of fire or explosion where there is an incinerator.

*Intent 2.* To limit the probability that fire will spread from a service room containing an incinerator to other parts of the building, which could lead to damage to the building.

*Intent 3.* To limit the probability that a fire originating in a location outside a service room containing an incinerator will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to damage to the building.

---

## **Provision: 3.6.2.1.(5)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2, OS1.4]

### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a service room containing equipment that uses a liquid having a flash point below 93.3°C to other parts of the building, which could lead to harm to persons in the other parts of the building.

*Intent 2.* To limit the probability that a fire originating in a location outside a service room will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F03-OP1.2, OP1.4]

### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that a fire will spread from a service room containing equipment that uses a liquid having a flash point below 93.3°C to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that a fire originating in a location outside a service room will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to damage to the building.

---

### **Provision: 3.6.2.1.(6)**

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2, OS1.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a service room containing electrical equipment that is required to be located in a service room by CSA C22.1, "Canadian Electrical Code, Part I," to other parts of the building, which could lead to harm to persons in the other parts of the building.

*Intent 2.* To limit the probability that a fire originating in a location outside a service room will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2, OP1.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire will spread from a service room containing electrical equipment that is required to be located in a service room by CSA C22.1, "Canadian Electrical Code, Part I," to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that a fire originating in a location outside a service room will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to damage to the building.

---

### **Provision: 3.6.2.1.(7)**

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2, OS1.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a service room that is in a storey not sprinklered throughout and that contains equipment not otherwise covered by Sentences 3.6.2.1.(1) to 3.6.2.1.(6) to other parts of the building, which could lead to harm to persons in the other parts of the building.

*Intent 2.* To limit the probability that a fire originating in a location outside a service room will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2, OP1.4]

**Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a service room that is in a storey not sprinklered throughout and that contains equipment not otherwise covered by Sentences 3.6.2.1.(1) to 3.6.2.1.(6) to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that a fire originating in a location outside a service room will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to damage to the building.

---

**Provision: 3.6.2.1.(8)**

---

**Intent(s)**

*Intent 1.* To exempt a service room containing equipment that does not constitute a fire hazard from the requirements of Sentences 3.6.2.1.(1) and 3.6.2.1.(7), which would otherwise require the service room to be separated from the remainder of the building by a fire separation, on the basis that the risk of fire originating and spreading from the service room is minimized.

---

**Provision: 3.6.2.1.(9)**

---

**Intent(s)**

*Intent 1.* To exempt a fireplace from the requirements of Sentences 3.6.2.1.(1) and 3.6.2.1.(7), which would otherwise require the fireplace to be located in a service room that is separated from the remainder of the building by a fire separation, on the basis of permitting the fireplace to open up into a room that it serves.

---

**Provision: 3.6.2.1.(10)**

---

**Intent(s)**

*Intent 1.* To exempt a roof-top appliance from the requirements of Sentences 3.6.2.1.(1) and 3.6.2.1.(7), which would otherwise require the roof-top appliance to be located in a service room that is separated from the remainder of the building by a fire separation, on the basis of a relatively low likelihood of fire spreading from a roof-top appliance into the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.6.2.2.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F06, F05-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that an explosion in a service room will spread to an exit, which could lead to the exit not being usable in the emergency situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

*Intent 2.* To limit the probability that an explosion in a service room will spread to an exit, which could lead to the exit not being usable in the emergency situation, which could lead to emergency responders being delayed or ineffective in carrying out their emergency response operations, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that an explosion in a service room will spread to an exit, which could lead to harm to persons using the exit.

### **Provision: 3.6.2.3.(1)**

---

#### **Intent(s)**

*Intent 1.* To clarify that, in the application of Subsection 3.6.2. to multiple types of equipment and appliances, several service rooms, each containing one type of equipment, are not necessarily required, and that more than one type of equipment is permitted to be present in a single service room in certain situations.

### **Provision: 3.6.2.4.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire or explosion involving an incinerator will spread to other fuel-fired equipment in the same room, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons in other parts of the building.

**Provision: 3.6.2.5.(1)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire involving combustible refuse will spread from the room to other parts of the building, which could lead to harm to persons in other parts of the building.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that a fire involving combustible refuse will spread from the room to other parts of the building, which could lead to damage to the building.

**Provision: 3.6.2.6.(1)**

---

**Objective**

OS1

**Attributions**

[F10-OS1.5] Applies to portion of Code text: "A swing-type door from a *service room* containing a *boiler* or incinerator shall swing outward from the room ..."

**Intent(s)**

*Intent 1.* To limit the probability of delays in opening an egress door that does not open in the direction of travel in a fire or explosion situation, which could lead to delays in the evacuation or movement of persons in the service room to a safe place, which could lead to harm to persons in the service room.

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] Applies to portion of Code text: "A swing-type door from a *service room* containing a *boiler* or incinerator shall swing ... inward if the door opens onto a corridor or any room used for an *assembly occupancy*."

**Intent(s)**

*Intent 1.* To supersede the requirement for an outward swinging door in the first part of Sentence 3.6.2.6.(1) and require the door to swing inwards in situations where there will likely be people on the other side of the door.

This is to limit the probability that a door swinging outwards will hit persons, or lead to persons hitting or bumping into the door, which could lead to harm to persons.

**Provision: 3.6.2.7.(1)**

---

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To state the application of Sentences 3.6.2.7.(2) to 3.6.2.7.(8).

### **Provision: 3.6.2.7.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2, OS1.4]

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.6.2.1.(5), which would otherwise require a minimum 1 h fire separation, and require a higher minimum rated separation, on the basis that vaults pose a higher risk of fire or explosion.

*Intent 2.* To limit the probability that fire will spread from the vault to other parts of the building, which could lead to harm to persons in other parts of the building.

*Intent 3.* To limit the probability that a fire originating in a location outside a vault will spread into the vault, which could lead to the disruption and discontinuation of service from equipment located in the vault, which could lead to an undue fire hazard in the building, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2, OP1.4]

### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.6.2.1.(5), which would otherwise require a minimum 1 h fire separation, and require a higher minimum rated separation, on the basis that vaults pose a higher risk of fire or explosion.

*Intent 2.* To limit the probability that fire will spread from the vault to other parts of the building, which could lead to damage to the building.

*Intent 3.* To limit the probability that a fire originating in a location outside a vault will spread into the vault, which could lead to the disruption and discontinuation of service from equipment located in the vault, which could lead to an undue fire hazard in the building, which could lead to damage to the building.

### **Provision: 3.6.2.7.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2] [F11-OS1.5] [F03-OS1.4]

### **Intent(s)**

*Intent 1.* To supersede the requirements of other provisions of the Code [typically Clause 3.6.2.7.(2)(b)] for the inclusion of sprinklers in an electrical vault located in a building that is otherwise sprinklered throughout, if certain conditions are met.

This is to limit the probability that:

---

## **Intent Statements: NBC 2010**

- other fire hazards will be present in the vault, which could lead to a fire involving the electrical equipment, which could lead to the spread of fire from the vault to other parts of the building, which could lead to harm to persons in other parts of the building,
- smoke from a fire in the vault will not be promptly detected, which could lead to persons not being notified of the fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- a fire originating in a location outside the vault will spread into the vault, which could lead to the disruption and discontinuation of service from equipment located in the vault, which could lead to an undue fire hazard in the building, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F02-OP1.2] [F03-OP1.4]

### **Intent(s)**

*Intent 1.* To supersede the requirements of other provisions of the Code [typically Clause 3.6.2.7.(2)(b)] for the inclusion of sprinklers in an electrical vault located in a building that is otherwise sprinklered throughout, if certain conditions are met.

This is to limit the probability that:

- other fire hazards will be present in the vault, which could lead to a fire involving the electrical equipment, which could lead to the spread of fire from the vault to other parts of the building, which could lead to damage to the building, and
- a fire originating in a location outside the vault will spread into the vault, which could lead to the disruption and discontinuation of service from equipment located in the vault, which could lead to an undue fire hazard in the building, which could lead to damage to the building.

---

### **Provision: 3.6.2.7.(4)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2, OS1.4]

### **Intent(s)**

*Intent 1.* To supersede the requirements of Subsections 3.1.8., Subsection 3.1.9. and 3.2.8., which would otherwise permit openings in the fire separations of vaults, and limit the openings to only certain penetrations, on the basis of maintaining the integrity of the separations.

*Intent 2.* To limit the probability that fire will spread from the vault to other parts of the building, which could lead to harm to persons in other parts of the building.

*Intent 3.* To limit the probability that a fire originating in a location outside a vault will spread into the vault, which could lead to the disruption and discontinuation of service from equipment located in the vault, which could lead to an undue fire hazard in the building, which could lead to harm to persons.

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To supersede the requirements of Subsections 3.1.8., Subsection 3.1.9. and 3.2.8., which would otherwise permit openings in the fire separations of vaults, and limit the openings to only certain penetrations, on the basis of maintaining the integrity of the separations.

*Intent 2.* To limit the probability that fire will spread from the vault to other parts of the building, which could lead to damage to the building.

*Intent 3.* To limit the probability that a fire originating in a location outside a vault will spread into the vault, which could lead to the disruption and discontinuation of service from equipment located in the vault, which could lead to an undue fire hazard in the building, which could lead to damage to the building.

---

### **Provision: 3.6.2.7.(5)**

### **Intent(s)**

*Intent 1.* To expand the application of Sentence 3.3.1.20.(2), which would otherwise apply only to spaces in which substances or conditions that have the potential to create an explosion hazard are present as a result of the principal use of a building, and make it applicable to an electrical equipment vault that contains dielectric-liquid-filled electrical equipment on the basis that this equipment poses a risk of explosion.

---

### **Provision: 3.6.2.7.(6)**

### **Objective**

OS1

### **Attributions**

[F81-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability of heat buildup in an electrical equipment vault, which could lead to the failure of the electrical equipment in the vault, which could lead to a fire or explosion in the vault, which could lead to harm to persons in other parts of the building.

*Intent 2.* To direct Code users to Part 6.

---

### **Provision: 3.6.2.7.(7)**

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that products of combustion generated by a fire in a vault will migrate to other parts of the building, which could lead to harm to persons in other parts of the building.

**Provision: 3.6.2.7.(8)**

---

**Objective**

OS1

**Attributions**

[F44-OS1.1] [F03-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that escaped liquid will spread outside the vault, which could lead to the ignition of vapour by a nearby ignition source, which could lead to harm to persons.

*Intent 2.* To limit the probability that ignited liquid from a fire in the vault will spread outside the vault, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

**Provision: 3.6.2.7.(9)**

---

**Objective**

OS1

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2, OS1.4] [F06-OS1.2, OS1.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from a service room containing a generator to other parts of the building, which could lead to harm to persons in the other parts of the building.

*Intent 2.* To limit the probability that a fire originating in a location outside a service room containing a generator will spread into the service room, which could lead to the disruption and discontinuation of service from equipment located in the service room, which could lead to an undue fire hazard in the building, which could lead to harm to persons.

*Intent 3.* To limit the probability that the generator will prematurely fail when exposed to fire, which could lead to fire alarm systems, sprinkler systems and other emergency equipment not operating properly in the fire situation, which could lead to:

- fire emergency response operations being delayed or ineffective, which could lead to:
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
  - the spread of fire to other parts of the building, which could lead to harm to persons,
- persons not being promptly notified of the fire situation, which could lead to delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons, and
- the buildup of smoke in exit stairs or floor areas, which could lead to:
  - delays or inefficiencies in fire suppression operations, which could lead to the spread of fire, which could lead to harm to persons, including emergency responders, and
  - delays in the evacuation or movement of persons to a safe place, which could lead to harm to persons.

growth, insect infestation or foul odours, which could lead to unsanitary conditions, which could lead to harm to persons.

---

### **Objective**

OH2

### **Attributions**

[F41-OH2.4, OH2.5] Applies to portion of Code text: "The room or bin into which a refuse chute discharges shall be ... impervious to moisture and be equipped with a water connection and floor drain for washing-down purposes."

### **Intent(s)**

*Intent 1.* To limit the probability that the absence or unavailability of services for washing down a room or bin into which a refuse chute discharges will lead to the buildup of refuse particles on the sides of the room or bin, which could lead to bacteria growth, insect infestation or foul odours, which could lead to unsanitary conditions, which could lead to harm to persons.

---

### **Provision: 3.6.3.3.(11)**

---

### **Objective**

OS1

### **Attributions**

[F01, F02-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that unrelated service equipment will lead to fire hazards in a room into which a refuse chute discharges, which could lead to the start or spread of fire to other parts of the building, which could lead to harm to persons.

---

### **Provision: 3.6.3.4.(1)**

---

### **Objective**

OS1

### **Attributions**

[F03-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that combustion products from a fire in one compartment will spread to another compartment by means of the exhaust ducts, which could lead to harm to persons in the other compartment.

---

### **Provision: 3.6.4.1.(1)**

---

### **Intent(s)**

*Intent 1.* To state the application of Subsection 3.6.4.

---

### **Provision: 3.6.4.2.(1)**

---

### **Intent(s)**

*Intent 1.* To expand the application of Sentence 3.6.4.2.(2).

---

**Provision: 3.6.4.2.(2)**

---

**Objective**

OS1

**Attributions**

[F03-OS1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.1.8.3.(1), which would otherwise require the space between a horizontal service space or other concealed space, and a required vertical fire separation, to be divided at the fire separation, if certain conditions are met.

This is to limit the probability that a fire in one fire compartment will spread to another fire compartment by means of the horizontal service space or concealed space, which could lead to harm to persons in the other compartment.

---

**Objective**

OP1

**Attributions**

[F03-OP1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.1.8.3.(1), which would otherwise require the space between a horizontal service space or other concealed space, and a required vertical fire separation, to be divided at the fire separation, if certain conditions are met.

This is to limit the probability that a fire in one fire compartment will spread to another fire compartment by means of the horizontal service space or concealed space, which could lead to damage to the building.

---

**Provision: 3.6.4.3.(1)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.1.5.15.(1), which would otherwise permit combustible ducts used in horizontal runs without any other restrictions, and to supersede the requirements of Article 3.6.5.1., which would otherwise require noncombustible materials, and permit combustible materials if certain conditions are met.

This is to limit the probability that:

- combustible material having inappropriately high flame spread and smoke development properties will be used in concealed spaces used as plenums, which could lead to the development of an inappropriate amount of smoke and the spread of fire across the exposed surfaces of the material, which could lead to the spread of fire and smoke from one fire compartment to another fire compartment by means of the plenum, which could lead to harm to persons in the other fire compartment, and

---

## **Intent Statements: NBC 2010**

- supports for the ceiling membrane will prematurely fail when exposed to fire conditions, which could lead to the spread of fire into the floor or roof assembly, and to other parts of the building, which could lead to harm to persons in the other parts of the building.

*Intent 2.* To supersede the requirements of Sentence 9.33.6.2.(1), which would otherwise require ducts, duct connectors, associated fittings and plenums used in air duct systems to be constructed of noncombustible material.

---

### **Provision: 3.6.4.3.(2)**

#### **Objective**

OS1

#### **Attributions**

[F03-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire in a space below a ceiling membrane that forms part of a required fire-resistance rating of the ceiling assembly will spread into the plenum space through openings in the ceiling membrane, which could lead to the premature failure of the assembly, which could lead to the further spread of fire to other parts of the building, which could lead to harm to persons.

*Intent 2.* To make Appendix Appendix D Division A information a requirement with respect to the protection of openings through ceiling membranes.

---

#### **Objective**

OP1

#### **Attributions**

[F03-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a fire in a space below a ceiling membrane that forms part of a required fire-resistance rating of the ceiling assembly will spread into the plenum space through openings in the ceiling membrane, which could lead to the premature failure of the assembly, which could lead to the further spread of fire to other parts of the building, which could lead to damage to the building.

*Intent 2.* To make Appendix Appendix D Division A information a requirement with respect to the protection of openings through ceiling membranes.

---

### **Provision: 3.6.4.4.(1)**

#### **Objective**

OS1

#### **Attributions**

[F01, F02, F12-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that access to attic or roof spaces will not be provided, which could lead to fire hazards within the attic or roof spaces going unnoticed, which could lead to a fire or the spread of fire to other parts of the building, which could lead to harm to persons.

*Intent 2.* To limit the probability that access to attic or roof spaces will not be provided, which could delay emergency responders' access to attic or roof spaces in a fire situation involving such spaces, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F01, F02, F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that access to attic or roof spaces will not be provided, which could lead to fire hazards within the attic or roof spaces going unnoticed, which could lead to a fire or the spread of fire to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that access to attic or roof spaces will not be provided, which could delay emergency responders' access to attic or roof spaces in a fire situation involving such spaces, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

**Provision: 3.6.4.5.(1)**

---

**Objective**

OS1

**Attributions**

[F01, F02, F12-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that access to horizontal service spaces for inspection purposes will not be provided, which could lead to fire hazards within the horizontal service spaces going unnoticed, which could lead to a fire or the spread of fire to other parts of the building, which could lead to harm to persons.

*Intent 2.* To limit the probability that access to horizontal service spaces for inspection purposes will not be provided, which could delay emergency responders' access to horizontal service spaces in a fire situation involving such spaces, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F01, F02, F12-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that access to horizontal service spaces for inspection purposes will not be provided, which could lead to fire hazards within the horizontal service spaces going unnoticed, which could lead to a fire or the spread of fire to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that access to horizontal service spaces for inspection purposes will not be provided, which could delay emergency responders' access to horizontal service spaces in a fire situation involving such spaces, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.6.4.6.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F01, F02, F12-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that access to crawl spaces will not be provided, which could lead to fire hazards within the crawl spaces going unnoticed, which could lead to a fire or the spread of fire to other parts of the building, which could lead to harm to persons.

*Intent 2.* To limit the probability that access to crawl spaces will not be provided, which could delay emergency responders' access to crawl spaces in a fire situation involving such spaces, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F01, F02, F12-OP1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that access to crawl spaces will not be provided, which could lead to fire hazards within the crawl spaces going unnoticed, which could lead to a fire or the spread of fire to other parts of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that access to crawl spaces will not be provided, which could delay emergency responders' access to crawl spaces in a fire situation involving such spaces, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

### **Provision: 3.6.5.1.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F01, F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that materials used in air duct systems will be ignited and contribute to the growth or spread of fire, which could lead to the spread of fire to other parts of the building by means of the air duct systems, which could lead to harm to persons.

### **Provision: 3.6.5.1.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt certain combustible materials from the requirements of Sentence 3.6.5.1.(1), which would otherwise require the material to be noncombustible, if certain conditions are met.

This is to limit the probability that the materials will contribute to the growth or spread of fire, which could lead to the spread of fire to other parts of the building by means of the air duct systems, which could lead to harm to persons.

---

### **Provision: 3.6.5.1.(3)**

#### **Intent(s)**

*Intent 1.* To exempt combustible ducts from the requirements of Sentence 3.6.5.1.(1), which would otherwise require the material to be noncombustible, and the requirements of Sentence 3.6.5.1.(2), which would otherwise impose certain conditions for the use of combustible material, on the basis that the ducts are restricted in their use and location.

---

### **Provision: 3.6.5.1.(4)**

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To exempt combustible duct sealant from the requirements of Sentence 3.6.5.1.(1), which would otherwise require the sealant to be noncombustible, if certain conditions are met.

This is to limit the probability that the materials will have inappropriately high flame-spread and smoke-development properties, which could lead to the development of an inappropriate amount of smoke and the spread of fire across the exposed surfaces of the material, which could lead to the spread of fire and smoke to other parts of the building by means of the air duct systems, which could lead to harm to persons.

---

### **Provision: 3.6.5.1.(5)**

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To exempt duct connectors that contain combustible materials from the requirements of Sentence 3.6.5.1.(1), which would otherwise require the connectors to be noncombustible, if certain conditions are met.

This is to limit the probability that the duct connectors will contribute to the growth or spread of fire, which could lead to the spread of fire by means of the air duct systems:

- to other parts of the building, which could lead to harm to persons, and
- from one fire compartment to another fire compartment, which could lead to harm to persons in the other fire compartment.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.6.5.2.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F01, F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that materials used for vibration isolation connectors will be ignited and contribute to the growth or spread of fire, which could lead to the spread of fire to other parts of the building by means of the air duct systems, which could lead to harm to persons.

### **Provision: 3.6.5.2.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To exempt combustible fabric vibration isolation connectors between ducts and air outlet units from the requirements of Sentence 3.6.5.2.(1), which would otherwise require the connectors to be noncombustible, if certain conditions are met.

This is to limit the probability that the connectors will contribute to the growth or spread of fire, which could lead to the spread of fire to other parts of the building by means of the air duct systems, which could lead to harm to persons.

### **Provision: 3.6.5.3.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that tape used to seal joints in air ducts, plenums and other parts of air duct systems will have an inappropriate flame resistance, which could lead to the contribution of the tape material to the growth or spread of fire, which could lead to the spread of fire to other parts of the building by means of the air duct systems, which could lead to harm to persons.

### **Provision: 3.6.5.4.(1)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that material used for coverings, linings and associated adhesives and insulation for air ducts, plenums and other parts of air duct systems will be ignited and contribute to the growth or spread of fire, which could lead to the spread of fire to other parts of the building by means of the air duct systems, which could lead to harm to persons.

---

**Provision: 3.6.5.4.(2)****Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that coverings and linings will have inappropriately high flame-spread and smoke-development properties, which could lead to the development of an inappropriate amount of smoke and the spread of fire across the exposed surfaces of the material, which could lead to the spread of fire and smoke to other parts of the building by means of the air duct systems, which could lead to harm to persons.

---

**Provision: 3.6.5.4.(3)****Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To exempt the outer coverings of ducts, plenums and other parts of air duct systems from the requirements of Sentence 3.6.5.4.(2), which would otherwise impose more stringent limits with respect to flame-spread rating and smoke-developed classification, and permit higher limits to the flame-spread rating and smoke-developed classification, on the basis that the higher limits do not significantly add to the risk of fire and smoke spread within an assembly permitted to be of combustible construction.

This is to limit the probability that the outer coverings will have inappropriately high flame-spread and smoke-development properties, which could lead to the development of an inappropriate amount of smoke and the spread of fire across the exposed surfaces of the material, which could lead to the spread of fire and smoke to other parts of the building by means of the air duct systems, which could lead to harm to persons.

---

**Provision: 3.6.5.4.(4)****Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that combustible coverings and linings of air duct systems will flame, glow, smoulder or smoke when exposed to fire conditions, which could lead to the coverings and linings contributing to the growth or spread of fire, which could lead to the spread of fire to other parts of the building by means of the air duct systems, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.6.5.4.(5)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that foamed plastic insulation will be used in air duct systems or for insulating air ducts, which could lead to the insulation contributing to the growth or spread of fire, which could lead to the spread of fire to other parts of the building by means of the air duct systems, which could lead to harm to persons.

### **Provision: 3.6.5.4.(6)**

---

#### **Objective**

OS1

#### **Attributions**

[F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To exempt foamed plastic insulation installed in ceiling spaces from the requirements of Sentence 3.6.5.4.(5), which would otherwise prohibit its use, if certain conditions are met.

This is to limit the probability that foamed plastic insulation will not be protected by a thermal barrier, which could lead to the insulation contributing to the growth or spread of fire, which could lead to the spread of fire to other parts of the building by means of the ceiling space, which could lead to harm to persons.

*Intent 2.* To expand the application of Article 3.1.5.12. [more specifically Sentence 3.1.5.12.(2)], which would otherwise apply only to buildings described in Sentence 1.3.3.2.(1) that are required to be of noncombustible construction.

### **Provision: 3.6.5.4.(7)**

---

#### **Objective**

OS1

#### **Attributions**

[F01, F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that fire will spread from one fire compartment to another fire compartment by means of the combustible coverings and linings of ducts, which could lead to harm to persons in the other fire compartment.

*Intent 2.* To limit the probability that fire will spread from one fire compartment to another fire compartment through gaps between a duct and the fire separation through which it passes if the combustible material were to be burnt in a fire occurring on one side of the fire separation, which could lead to harm to persons in the other fire compartment.

*Intent 3.* To limit the probability that combustible coverings and linings of ducts will be ignited from nearby heat sources, which could lead to the spread of fire along the ducts to other parts of the building, which could lead to harm to persons.

**Provision: 3.6.5.5.(1)**

---

**Objective**

OS1

**Attributions**

[F01, F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that insulation and coverings on pipes will be ignited from exposure to high pipe fluid temperatures, or will flame, glow, smoulder or smoke when exposed to maximum service temperatures, which could lead to the growth and spread of fire along the pipe insulation or covering to other parts of the building, which could lead to harm to persons.

**Provision: 3.6.5.5.(2)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that combustible insulation and coverings on piping located in certain spaces will have inappropriately high flame-spread properties, which could lead to the spread of fire across the exposed surfaces of the material, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

**Provision: 3.6.5.5.(3)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that insulation and coverings on piping located in certain rooms and spaces will have inappropriately high flame-spread properties, which could lead to the spread of fire across the exposed surfaces of the material, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

**Provision: 3.6.5.5.(4)**

---

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that combustible insulation and coverings used on piping in high buildings will have inappropriately high smoke-development properties, which could lead to the development

---

**Intent Statements: NBC 2010**

of an inappropriate amount of smoke, which could lead to the spread of smoke to other parts of the building, which could lead to harm to persons.

**Provision: 3.6.5.5.(5)**

---

**Intent(s)**

*Intent 1.* To exempt combustible insulation and coverings used on pipes in certain locations from the requirements of Sentences 3.6.5.5.(2) to 3.6.5.5.(4), which would otherwise impose certain flame-spread ratings and smoke-developed classifications, on the basis that the pipes are concealed in a manner that they would not easily be exposed to fire burning outside the concealed space.

**Provision: 3.6.5.6.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Sentence 6.2.1.4.(1) for requirements pertaining to clearances of furnace plenums from combustible material.

**Provision: 3.6.5.6.(2)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability of insufficient clearances between furnace supply ducts and combustible material, which could lead to the ignition of combustible material, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

**Provision: 3.6.5.6.(3)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability of insufficient clearances between furnace supply ducts and combustible material, which could lead to the ignition of the combustible material, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

**Provision: 3.6.5.6.(4)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability of insufficient clearances between furnace supply ducts and combustible material, which could lead to the ignition of the combustible material, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Provision: 3.6.5.6.(5)**

**Objective**

OS1

**Attributions**

[F01-OS1.2]

**Intent(s)**

*Intent 1.* To exempt register boxes installed in floors directly over pipeless furnaces from the requirements of Sentences 3.6.5.6.(2) to 3.6.5.6.(4), which would otherwise require certain clearances between the register boxes and combustible material, if certain conditions are met.

This is to limit the probability that combustible material will be ignited by the register boxes, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

**Provision: 3.6.5.7.(1)**

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that combustible grilles, diffusers and other devices for supply, return, and exhaust-air openings will have higher flame-spread and smoke-development properties than those required for the interior finish of the surface on which they are installed, which could lead to the development of an inappropriate amount of smoke and the spread of fire across the exposed surfaces of the combustible grilles, diffusers and other devices, which could lead to the spread of fire and smoke to other parts of the building, which could lead to harm to persons.

---

**Provision: 3.6.5.8.(1)**

**Objective**

OS1

**Attributions**

[F02-OS1.2]

**Intent(s)**

*Intent 1.* To limit the probability that material used to construct return ducts will have inappropriately high flame-spread properties, which could lead to the spread of fire across the exposed surfaces of the ducts, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.6.5.8.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F01, F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that return duct material exposed to radiation from a furnace will ignite, which could lead to the growth and spread of fire to other parts of the building, which could lead to harm to persons.

### **Provision: 3.6.5.8.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F01, F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that return duct material exposed to radiation from a solid-fuel-fired furnace will ignite, which could lead to the growth and spread of fire to other parts of the building, which could lead to harm to persons.

### **Provision: 3.6.5.8.(4)**

---

#### **Objective**

OS1

#### **Attributions**

[F01, F02-OS1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that combustible debris accumulating in certain horizontal locations in combustible return ducts will not be isolated or separated from the combustible surface of the duct by a duct lining of noncombustible material, which could lead to a fire involving the debris igniting the duct and then spreading to other parts of the building, which could lead to harm to persons.

### **Provision: 3.7.1.1.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability of contact or collision with items at the ceiling level, which could lead to harm to persons.

### **Provision: 3.7.1.1.(2)**

---

**Intent(s)**

*Intent 1.* To expand the application of Subsection 9.5.3. regarding minimum ceiling heights to dwelling units in buildings described in Sentence 1.3.3.2.(1).

**Provision: 3.7.2.1.(1)**

---

**Objective**

OH2

**Attributions**

[F72-OH2.1]

**Intent(s)**

*Intent 1.* To limit the probability of the inadequate disposal of human waste, which could lead to contact with sewage or unsanitary conditions, which could lead to harm to persons.

**Provision: 3.7.2.1.(2)**

---

**Objective**

OH2

**Attributions**

[F72-OH2.1]

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.7.2.1.(1), which would otherwise require sanitary fixtures be piped to the sanitary drainage system, and permit the use of waterless urinals where there is a water supply on the basis that waterless urinals provide an equivalent level of sanitary drainage.

**Provision: 3.7.2.2.(1)**

---

**Objective**

OH2

**Attributions**

[F72-OH2.1] Applies to portion of Code text: "... water closets shall be provided ..."

**Intent(s)**

*Intent 1.* To limit the probability of the inadequate disposal of human waste, which could lead to contact with sewage or unsanitary conditions, which could lead to harm to persons.

---

**Intent(s)**

*Intent 1.* To clarify the basis for determining the number of males and the number of females in a building based on the total occupant load.

**Provision: 3.7.2.2.(2)**

---

**Intent(s)**

*Intent 1.* To permit a reduction in the number of water closets otherwise required by Sentences 3.7.2.2.(6), 3.7.2.2.(7), 3.7.2.2.(8), 3.7.2.2.(12), 3.7.2.2.(13) or 3.7.2.2.(14) if a universal toilet room is provided.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 3.7.2.2.(3)**

---

#### **Intent(s)**

*Intent 1.* To clarify that a single water closet in a universal toilet room does not count towards the total water closet count in a building, unless the requirements of Sentences 3.7.2.2.(2) and 3.7.2.2.(4) apply.

---

### **Provision: 3.7.2.2.(4)**

---

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.7.2.2.(1), which would otherwise require separate water closets for each sex, and permit both sexes to be served by a single water closet, on the basis that the occupant load is limited to a small number.

---

### **Provision: 3.7.2.2.(5)**

---

#### **Intent(s)**

*Intent 1.* To permit a reduction in the number of water closets for males as required by Article 3.7.2.2. if urinals are substituted for some of the water closets.

---

### **Provision: 3.7.2.2.(6)**

---

#### **Objective**

OH2

#### **Attributions**

[F72-OH2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

---

### **Provision: 3.7.2.2.(7)**

---

#### **Objective**

OH2

#### **Attributions**

[F72-OH2.1]

#### **Intent(s)**

*Intent 1.* To exempt primary schools and day-care centres from the requirements of Sentence 3.7.2.2.(6), which would otherwise use a different method for determining the minimum number of water closets, on the basis that such occupancies have different needs.

*Intent 2.* To state the method for calculating the number of water closets required in an occupancy that is used for a primary school or a day-care centre.

This is to limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

**Provision: 3.7.2.2.(8)**

---

**Objective**

OH2

**Attributions**

[F72-OH2.1]

**Intent(s)**

*Intent 1.* To exempt places of worship and undertaking premises from the requirements of Sentence 3.7.2.2.(6), which would otherwise use a different method for determining the minimum number of water closets, on the basis that such occupancies have different needs.

*Intent 2.* To state the method for calculating the number of water closets required in occupancies that are used for worship or undertaking purposes.

This is to limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

**Provision: 3.7.2.2.(9)**

---

**Objective**

OH2

**Attributions**

[F72-OH2.1]

**Intent(s)**

*Intent 1.* To limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

**Provision: 3.7.2.2.(10)**

---

**Objective**

OH2

**Attributions**

[F72-OH2.1]

**Intent(s)**

*Intent 1.* To limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

**Provision: 3.7.2.2.(11)**

---

**Objective**

OH2

**Attributions**

[F72-OH2.1]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

---

### **Provision: 3.7.2.2.(12)**

#### **Objective**

OH2

#### **Attributions**

[F72-OH2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

---

### **Provision: 3.7.2.2.(13)**

#### **Objective**

OH2

#### **Attributions**

[F72-OH2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

---

### **Provision: 3.7.2.2.(14)**

#### **Objective**

OH2

#### **Attributions**

[F72-OH2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

---

### **Provision: 3.7.2.2.(15)**

#### **Objective**

OH2

#### **Attributions**

[F72-OH2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that water closets will not be accessible to the public, which could lead to the inability of persons [the public] to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

---

**Provision: 3.7.2.2.(16)**

---

**Objective**

OH2

**Attributions**

[F72-OH2.1]

**Intent(s)**

*Intent 1.* To limit the probability of an insufficient number of water closets, which could lead to the inability of persons to use water closets in a timely manner, which could lead to unsanitary conditions, which could lead to harm to persons.

*Intent 2.* To expand the application of Table 3.7.2.2.-B regarding the number of water closets required to suites of mercantile occupancy whose area is not more than 500 m<sup>2</sup>, on the basis that customers are not in the occupancy for any appreciable length of time.

---

**Provision: 3.7.2.3.(1)**

---

**Objective**

OH2

**Attributions**

[F71-OH2.3]

**Intent(s)**

*Intent 1.* To limit the probability of an insufficient number of lavatories, which could lead to the inability of persons to use lavatories in a timely manner, which could lead to an inability to maintain personal hygiene, which could lead to harm to persons.

---

**Provision: 3.7.2.3.(2)**

---

**Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.7.2.3.(1), which would otherwise require lavatories, and permit the use of wash fountains, on the basis that such fountains provide an equivalent level of performance.

---

**Provision: 3.7.2.3.(3)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that shelves or other projections will be improperly located above lavatories, which could lead to a person hitting or bumping into the shelves or projections, which could lead to harm to the person.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.7.2.3.(4)**

---

#### **Objective**

OH2

### **Provision: 3.7.2.7.(1)**

---

#### **Objective**

OH2

#### **Attributions**

[F40-OH2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that overflow water from a blocked or obstructed urinal will not be drained and will accumulate on the floor, which could lead to persons using the room coming into contact with contaminated water, which could lead to unsanitary conditions, which could lead to harm to persons.

---

#### **Objective**

OS3

#### **Attributions**

[F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that overflow water from a blocked or obstructed urinal will not be drained and will accumulate on the floor, which could lead to persons using the room slipping or falling, which could lead to harm to persons.

### **Provision: 3.7.2.8.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F20-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that grab bars will have insufficient load resistance, which could lead to persons using the grab bars slipping or falling, which could lead to harm to persons.

### **Provision: 3.7.2.9.(1)**

---

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a bathtub will not be provided for a person using a manual wheelchair or other manual mobility assistance device, which could lead to persons not being able to bathe without the assistance of another person.

---

#### **Objective**

OS3

#### **Attributions**

3.7.2.9.(1)(b) [F31-OS3.2]

**Intent(s)**

*Intent 1.* To limit the probability that the water temperature will not be controlled, which could lead to a person being scalded while using the bath facilities, which could lead to harm to the person.

---

**Objective**

OS3

**Attributions**

3.7.2.9.(1)(c) [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that an absence of grab bars will lead to a person slipping or falling, which could lead to harm to the person.

---

**Provision: 3.7.3.1.(1)**

---

**Objective**

OS3

**Attributions**

[F43-OS3.4] [F20-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that the installation of non-flammable medical gas piping systems will not meet proper standards, which could lead to the system not performing as intended in normal usage situations, which could lead to safety hazards [e.g. pipe ruptures, gas leaks, etc.], which could lead to harm to persons.

---

**Provision: 3.8.1.1.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Section 3.8.

---

**Provision: 3.8.1.2.(1)**

---

**Objective**

OA1

**Attributions**

[F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to readily and conveniently enter a building.

*Intent 2.* To state that the requirements of Article 3.8.3.4. also apply to exterior ramps referred to in Clause 3.8.1.2.(1)(b).

---

## **Intent Statements: NBC 2010**

### **Provision: 3.8.1.2.(2)**

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to enter a suite without the assistance of another person.

### **Provision: 3.8.1.2.(3)**

---

#### **Intent(s)**

*Intent 1.* To state that Article 3.8.3.3. also applies to barrier-free exterior pedestrian entrances required by Sentences 3.8.1.2.(1) or 3.8.1.2.(2).

### **Provision: 3.8.1.2.(4)**

---

#### **Intent(s)**

*Intent 1.* To limit the application of Article 3.8.3.3. to only one doorway per entrance, located in a barrier-free path of travel, under certain conditions.

### **Provision: 3.8.1.2.(5)**

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to cross from a barrier-free storey in one building to a barrier-free storey in a connected building by the same means that is provided for other persons.

### **Provision: 3.8.1.3.(1)**

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to circulate within a building without the assistance of another person.

**Provision: 3.8.1.3.(2)**

---

**Objective**

OS3

**Attributions**

3.8.1.3.(2)(a), 3.8.1.3.(2)(b) [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that a manual wheelchair or other manual mobility assistance device used by a person will be trapped in a walking surface, which could lead to the loss of balance of the person, which could lead to harm to the person or persons nearby.

---

**Objective**

OA1

**Attributions**

3.8.1.3.(2)(a), 3.8.1.3.(2)(b) [F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a manual wheelchair or other manual mobility assistance device used by a person will be trapped in a walking surface, which could impede the person's ability to circulate.

---

**Objective**

OA1

**Attributions**

3.8.1.3.(2)(c) [F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a walking surface will not adequately support a manual wheelchair or other manual mobility assistance device used by a person, which could impede the person's ability to circulate.

---

**Objective**

OA1

**Attributions**

3.8.1.3.(2)(d), 3.8.1.3.(2)(e) [F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to circulate without the assistance of another person.

---

**Objective**

OS3

**Attributions**

3.8.1.3.(2)(d), 3.8.1.3.(2)(e) [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will trip, which could lead to harm to the person or persons nearby.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS3

### **Attributions**

3.8.1.3.(2)(c) [F30-OS3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will slip or lose her/his balance, which could lead to harm to the person or persons nearby.

---

### **Provision: 3.8.1.3.(3)**

### **Intent(s)**

*Intent 1.* To clarify what types of platform-equipped passenger-elevating devices are examples of acceptable solutions to overcome differences in level.

---

### **Provision: 3.8.1.3.(4)**

### **Objective**

OA1

### **Attributions**

[F73-OA1]

### **Intent(s)**

*Intent 1.* To supersede the minimum width requirements stated in Sentence 3.8.1.3.(1) and Clause 3.8.3.2.(1)(b) and require a greater minimum width for long barrier-free paths of travel, on the basis that an inadequate width does not permit two persons using manual wheelchairs or other manual mobility assistance devices to pass each other.

This is to limit the probability that a person using a manual wheelchair or other manual mobility assisting device will have to wait an excessively long time for another person using a manual wheelchair or other manual mobility assistance device to complete the transit along the barrier-free path of travel.

---

### **Provision: 3.8.1.4.(1)**

### **Objective**

OA1

### **Attributions**

[F73-OA1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to move about within a building without the assistance of another person.

**Provision: 3.8.1.4.(2)**

---

**Objective**

OA1

**Attributions**

[F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to find the way to barrier-free path of travel in the building.

**Provision: 3.8.1.5.(1)**

---

**Objective**

OA2

**Attributions**

[F74-OA2]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to operate essential building controls without assistance.

*Intent 2.* To direct Code users to Sentence 3.5.2.1.(3) for the requirement regarding controls in passenger elevators.

---

**Objective**

OS3

**Attributions**

[F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to operate the controls for building services or a fire alarm pull station or other safety device in an emergency situation, which could lead to delays in the operation of such controls and devices, which could lead to harm to persons.

*Intent 2.* To direct Code users to Sentence 3.5.2.1.(3) for the requirement regarding controls in passenger elevators.

**Provision: 3.8.2.1.(1)**

---

**Objective**

OA1

**Attributions**

[F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to move about within a building, or use facilities located within a building, without the assistance of another person.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.8.2.1.(2)**

---

#### **Intent(s)**

*Intent 1.* To exempt certain areas of buildings from the requirements of Sentence 3.8.2.1.(1), which would otherwise require a barrier-free path of travel, on the basis that it is impractical and onerous to provide barrier-free access to and egress from these areas.

### **Provision: 3.8.2.1.(3)**

---

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability of an insufficient number of spaces for manual wheelchairs, which could lead to persons using manual wheelchairs being excluded from certain rooms and areas.

### **Provision: 3.8.2.2.(1)**

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to travel between exterior parking spaces and a building entrance without the assistance of another person.

### **Provision: 3.8.2.2.(2)**

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to travel between indoor parking spaces and a building entrance without the assistance of another person.

### **Provision: 3.8.2.2.(3)**

---

#### **Objective**

OA2

#### **Attributions**

3.8.2.2.(3)(a) [F74-OA2]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to travel between a passenger loading zone and a barrier-free entrance without the assistance of another person.

---

**Objective**

OA1

**Attributions**

3.8.2.2.(3)(b) [F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to travel between a passenger loading zone and a barrier-free entrance without the assistance of another person.

---

**Objective**

OA2

**Attributions**

3.8.2.2.(3)(c) [F74-OA2]

**Intent(s)**

*Intent 1.* To limit the probability that vehicles transporting manual wheelchairs will be unable to pass underneath an overhang, which could lead to:

- such vehicles not having access to exterior passenger loading zones, or
- such vehicles hitting the overhangs and being damaged.

---

**Provision: 3.8.2.3.(1)**

---

**Objective**

OA2

**Attributions**

[F74-OA2]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to access a barrier-free washroom without the assistance of another person.

*Intent 2.* To state the application of Articles 3.8.3.8. to 3.8.3.12.

---

**Objective**

OH2

**Attributions**

[F72-OH2.1] [F71-OH2.3]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to access a barrier-free washroom without the assistance of another person, which could lead to the person not being able to use:

---

## **Intent Statements: NBC 2010**

- a water closet, which could lead to unsanitary conditions, which could lead to harm to persons, and
- a lavatory, which could lead to an inability to maintain personal hygiene, which could lead to harm to persons.

*Intent 2.* To state the application of Articles 3.8.3.8. to 3.8.3.12.

---

### **Provision: 3.8.2.3.(2)**

#### **Intent(s)**

*Intent 1.* To exempt washrooms from the requirements of Sentence 3.8.2.3.(1) [and referenced in Articles 3.8.3.8. to 3.8.3.12.] to be barrier-free, if they are located:

- within a suite of care occupancy or within a suite of residential occupancy,
- on floor areas where other barrier-free washrooms are provided on the same floor area within 45 m, or
- in an individual suite used for a business and personal services occupancy, mercantile occupancy or industrial occupancy that has an area of less than 500 m<sup>2</sup> and is completely separated from the remainder of the building and has no access to the remainder of the building.

---

### **Provision: 3.8.2.3.(3)**

#### **Objective**

OH2

#### **Attributions**

[F72-OH2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to access a water closet, which could lead to an inability to use a water closet, which could lead to unsanitary conditions, which could lead to harm to persons.

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to access a water closet.

---

### **Provision: 3.8.2.3.(4)**

#### **Intent(s)**

*Intent 1.* To exempt washrooms from the requirements of Sentence 3.8.2.3.(1) [and of referenced Articles 3.8.3.8. to 3.8.3.11.] to be barrier-free, on the basis that the washrooms are required to conform to Article 3.8.3.12. and will thus provide adequate access and use in existing buildings undergoing alterations.

*Intent 2.* To state the application of Article 3.8.3.12.

**Provision: 3.8.3.1.(1)**

---

**Objective**

OA1

**Attributions**

[F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to identify or locate a barrier-free entrance without the assistance of another person.

**Provision: 3.8.3.1.(2)**

---

**Objective**

OA2

**Attributions**

[F74-OA2]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to identify or locate barrier-free facilities without the assistance of another person.

**Provision: 3.8.3.1.(3)**

---

**Objective**

OA2

**Attributions**

[F74-OA2]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to identify or locate barrier-free washroom facilities without the assistance of another person.

**Provision: 3.8.3.1.(4)**

---

**Objective**

OA2

**Attributions**

[F74-OA2]

**Intent(s)**

*Intent 1.* To limit the probability that a person with a hearing disability will not be able to identify or locate equipment that responds to their needs without the assistance of another person.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.8.3.2.(1)**

---

#### **Objective**

OA1

#### **Attributions**

3.8.3.2.(1)(a) [F73-OA1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to travel along an exterior path of travel without the assistance of another person.

---

#### **Objective**

OS3

#### **Attributions**

3.8.3.2.(1)(a) [F30-OS3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will slip or fall on an exterior walk, which could lead to harm to the person or persons nearby.

---

#### **Objective**

OA1

#### **Attributions**

3.8.3.2.(1)(b) [F73-OA1]

#### **Intent(s)**

*Intent 1.* To supersede the requirement for a minimum width of 920 mm stated in Sentence 3.8.1.3.(1) and require a greater minimum width for exterior walks in barrier-free paths of travel.

This is to limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to travel along an exterior path of travel without the assistance of another person.

---

#### **Attributions**

3.8.3.2.(1)(c)

#### **Intent(s)**

*Intent 1.* To expand the application of Clause 3.8.3.4.(1)(c) to areas adjacent to the entrance doorways of exterior walks.

### **Provision: 3.8.3.3.(1)**

---

#### **Objective**

OA1

#### **Attributions**

[F73-OA1]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To exempt doorways from the minimum width requirements stated in Sentence 3.8.1.3.(1) and permit a lesser minimum width, on the basis that doorways comprise a small portion of a pathway. This is to limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to circulate within a building without the assistance of another person.

---

### **Provision: 3.8.3.3.(2)**

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to access a bathroom without the assistance of another person.

---

### **Provision: 3.8.3.3.(3)**

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person with limited physical strength and/or manual dexterity, or having joint mobility restrictions, will not be able to open a door without the assistance of another person.

---

#### **Objective**

OS3

#### **Attributions**

[F10-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person with limited physical strength and/or manual dexterity, or having joint mobility limitations, will not be able to operate an egress door during an emergency, which could lead to delays in evacuating or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.8.3.3.(4)**

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will be impeded in accessing bathrooms or other areas in a building without the assistance of another person.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS3

### **Attributions**

[F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will be impeded in egressing during an emergency, which could lead to delays in evacuating or moving to a safe place, which could lead to harm to persons.

---

### **Provision: 3.8.3.3.(5)**

---

### **Objective**

OA1

### **Attributions**

[F73-OA1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to open all doors at the entrance without the assistance of another person.

---

### **Provision: 3.8.3.3.(6)**

---

### **Intent(s)**

*Intent 1.* To exempt certain suites from the requirements of Sentence 3.8.3.3.(5), which would otherwise require doors to be equipped with power door operators, on the basis that the suites are limited in size and have no access to the remainder of the building.

---

### **Provision: 3.8.3.3.(7)**

---

### **Objective**

OA1

### **Attributions**

[F73-OA1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to open a door without the assistance of another person.

---

### **Provision: 3.8.3.3.(8)**

---

### **Intent(s)**

*Intent 1.* To exempt certain doors from the requirements of Sentence 3.8.3.3.(7), which would otherwise limit the force needed to open the doors, on the basis that:

- persons in dwelling units are familiar with the operation of their doors, and
- closers need to be able to latch doors in the closed position.

**Provision: 3.8.3.3.(9)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not have sufficient time to pass through a doorway without being struck by the door, which could lead to harm to the person.

---

**Objective**

OA1

**Attributions**

[F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not have sufficient time to pass through a doorway, which could lead to persons not being able to gain access to areas in a building.

---

**Intent(s)**

*Intent 1.* To supersede the latter part of Sentence 3.8.3.3.(9) and not require a minimum closing period for closers for doors at the entrances to dwelling units, on the basis that persons in dwelling units are familiar with the operation of their doors.

**Provision: 3.8.3.3.(10)**

---

**Objective**

OA1

**Attributions**

[F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to operate a door opening mechanism and open a door without interference from the manual wheelchair or other manual mobility assistance device.

**Provision: 3.8.3.3.(11)**

---

**Objective**

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to pass through a vestibule without becoming stuck or trapped, which could lead to harm to the person.

---

### **Objective**

OA1

### **Attributions**

[F73-OA1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to pass through a vestibule without becoming stuck or trapped.

---

### **Provision: 3.8.3.3.(12)**

---

### **Intent(s)**

*Intent 1.* To exempt inactive leaves in doorways with multiple leaves from the requirements of Article 3.8.3.3., on the basis that inactive leaves are intended to be used infrequently.

---

### **Provision: 3.8.3.3.(13)**

---

### **Objective**

OA1

### **Attributions**

[F73-OA1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to rest and remain stationary while opening a door without the assistance of another person.

*Intent 2.* To limit the probability that the level area of a ramp will be of insufficient size to provide a clear width beyond the latch edge of the door, which could lead to a person using a manual wheelchair or other manual mobility assisting device being unable to negotiate the wheelchair past the door without assistance.

---

### **Provision: 3.8.3.4.(1)**

---

### **Objective**

OA1

### **Attributions**

3.8.3.4.(1)(b) [F73-OA1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will have difficulty using a ramp without the assistance of another person.

---

**Objective**

OS3

**Attributions**

3.8.3.4.(1)(d) [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to rest along a ramp, which could lead to a loss of control, which could lead to harm to the person or persons nearby.

---

**Attributions**

3.8.3.4.(1)(d)

**Intent(s)**

*Intent 1.* To exempt level areas of ramps from the requirement for a greater minimum width as stated in Sentence 3.8.1.3.(1) and permit a lesser minimum width, on the basis that the width of the level areas should be the same as that of the ramp.

---

**Objective**

OA1

**Attributions**

3.8.3.4.(1)(c) [F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to rest and remain stationary while opening a door without the assistance of another person.

*Intent 2.* To limit the probability that the level area of a ramp will be of insufficient size to provide a clear width beyond the latch edge of the door, which could lead to a person using a manual wheelchair or other manual mobility assistance device being unable to negotiate the manual wheelchair or device past the door without assistance.

---

**Objective**

OA1

**Attributions**

3.8.3.4.(1)(d) [F73-OA1]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to rest and remain stationary in areas along a ramp without the assistance of another person.

---

**Attributions**

3.8.3.4.(1)(e)

**Intent(s)**

*Intent 1.* To expand the application of Articles 3.4.6.5. and 3.4.6.6. to ramps in a barrier-free path of travel.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS3

### **Attributions**

3.8.3.4.(1)(b) [F30-OS3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will be unable to control the movement of the manual wheelchair or device, which could lead to harm to the person or persons nearby.

---

### **Attributions**

3.8.3.4.(1)(a)

### **Intent(s)**

*Intent 1.* To exempt handrails from the requirement for a greater minimum width as stated in Sentence 3.8.1.3.(1) and permit a lesser minimum width, on the basis that this affords users better control.

---

### **Objective**

OS3

### **Attributions**

3.8.3.4.(1)(c) [F30-OS3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to rest and remain stationary while opening a door, which could lead to a loss of control, which could lead to harm to the person or persons nearby.

---

## **Provision: 3.8.3.4.(2)**

---

### **Intent(s)**

*Intent 1.* To exempt aisles serving fixed seating from the requirement stated in Clause 3.8.3.4.(1)(e), which would otherwise require handrails, on the basis that the handrails will not allow persons to have access to rows of seats from the aisle.

---

## **Provision: 3.8.3.4.(3)**

---

### **Intent(s)**

*Intent 1.* To expand the application of Clauses 3.8.3.4.(1)(a), 3.8.3.4.(1)(c), 3.8.3.4.(1)(d) and 3.8.3.4.(1)(e) to floors and walks that have a steep slope.

---

## **Provision: 3.8.3.5.(1)**

---

### **Objective**

OS3

### **Attributions**

[F30-OS3.1] [F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that passenger-elevating devices will not meet proper standards, which could lead to such devices not performing as intended in normal or emergency use situations, which could lead to harm to persons.

---

**Provision: 3.8.3.6.(1)**

---

**Objective**

OA2

**Attributions**

[F74-OA2] Applies to entire Sentence except for portion of Code text: "... without infringing on egress from any row of seating or any aisle requirements ..."

**Intent(s)**

*Intent 1.* To limit the probability that spaces for manual wheelchairs will be obstructed or won't be level, or will be of insufficient size, which could lead to persons using manual wheelchairs being unable to use the spaces, which could lead to such persons being excluded from certain rooms and areas.

*Intent 2.* To limit the probability that spaces for manual wheelchairs will be of insufficient size to accommodate 2 manual wheelchairs side by side, which could lead to the isolation of persons using manual wheelchairs, which could lead to inconvenience.

*Intent 3.* To limit the probability that spaces for manual wheelchairs will not be accessible for persons using manual wheelchairs, which could lead to such persons being excluded from certain rooms and areas.

*Intent 4.* To limit the probability that spaces for manual wheelchairs will be located in areas where there is not a choice of viewing locations and a clear view of the event taking place, which could lead to inconvenience.

---

**Objective**

OS3

**Attributions**

[F30-OS3.1] Applies to portion of Code text: "... level, or level with removable seats ..."

**Intent(s)**

*Intent 1.* To limit the probability that spaces for manual wheelchairs will not be level, which could lead to a person using a manual wheelchair losing control of the manual wheelchair and rolling away from the space, which could lead to harm to the person or persons nearby.

---

**Objective**

OS3

**Attributions**

3.8.3.6.(1)(d) [F10-OS3.7]

**Intent(s)**

*Intent 1.* To limit the probability that persons in manual wheelchairs in spaces designated for manual wheelchair use will infringe on or obstruct egress routes, which could lead to delays in the evacuation or movement of persons to a safe place in an emergency situation, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.8.3.7.(1)**

---

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person with a hearing disability will be unable to properly hear performances or discussions in assembly occupancies and large classrooms, auditoria, meeting rooms and theatres.

---

#### **Objective**

OS3

#### **Attributions**

[F11-OS3.7]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person with a hearing disability will be unable to properly hear fire alarm signals or emergency messages, which could lead to delays in evacuating or moving to a safe place, which could lead to harm to persons.

### **Provision: 3.8.3.7.(2)**

---

#### **Intent(s)**

*Intent 1.* To supersede the requirements of Sentence 3.8.3.7.(1), which would otherwise require the assistive listening system to be installed throughout the entire seating area, and permit an induction loop system to be installed in only half the seating area, on the basis that persons with a hearing disability can be located within the induction loop system.

### **Provision: 3.8.3.8.(1)**

---

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to access and use a barrier-free washroom without the assistance of another person.

---

#### **Objective**

OH2

#### **Attributions**

[F72-OH2.1]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to use a water closet without the assistance of another person, which could lead to unsanitary conditions, which could lead to harm to persons.

---

### **Objective**

OA2

### **Attributions**

3.8.3.8.(1)(b)(i) [F74-OA2]

### **Intent(s)**

*Intent 1.* To limit the probability that a person will not be able to secure a water-closet stall or enclosure, which could lead to inconvenience in using the facility.

---

### **Objective**

OS3

### **Attributions**

3.8.3.8.(1)(d)(i) and 3.8.3.8.(1)(d)(iii) to 3.8.3.8.(1)(d)(vi) [F30, F20-OS3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the absence of grab bars will lead to a person with a physical disability slipping or falling, which could lead to harm to the person.

*Intent 2.* To limit the probability that a person's arm will slip between the grab bar and the supporting surface, which could lead to the arm becoming trapped, which could lead to harm to the person.

*Intent 3.* To limit the probability that a grab bar will have insufficient resistance to loads, which could lead to the collapse of the grab bar, which could lead to persons falling, which could lead to harm to persons.

---

### **Objective**

OS3

### **Attributions**

3.8.3.8.(1)(e) [F30-OS3.1] Applies to portion of Code text: "... be equipped with a coat hook ... projecting not more than 50 mm from the wall ..."

### **Intent(s)**

*Intent 1.* To limit the probability that a coat hook will project excessively into the stall or enclosure space, which could lead to a person being hit by the coat hook, which could lead to harm to the person.

---

### **Intent(s)**

*Intent 1.* To supersede the requirement for a minimum width of 920 mm stated in Sentence 3.8.1.3.(1) and require a greater minimum width, on the basis that water-closet stalls or enclosures in washrooms need to be wider to allow proper usage by persons using a manual wheelchair or other manual mobility assistance device.

---

## **Provision: 3.8.3.9.(1)**

---

### **Objective**

OA2

### **Attributions**

[F74-OA2]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to use a water closet without the assistance of another person.

---

### **Objective**

OH2

### **Attributions**

[F72-OH2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to use a water closet without the assistance of another person, which could lead to unsanitary conditions, which could lead to harm to persons.

---

## **Provision: 3.8.3.10.(1)**

---

### **Objective**

OA2

### **Attributions**

[F74-OA2]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to use a urinal without the assistance of another person.

---

### **Objective**

OH2

### **Attributions**

[F72-OH2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to use a urinal without the assistance of another person, which could lead to unsanitary conditions, which could lead to harm to persons.

---

## **Provision: 3.8.3.10.(2)**

---

### **Objective**

OA2

### **Attributions**

[F74-OA2]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to use a urinal without the assistance of another person.

---

**Objective**

OS3

**Attributions**

3.8.3.10.(2)(c) [F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that the absence of grab bars will lead to a person with a physical disability slipping or falling, which could lead to harm to the person.

---

**Attributions**

3.8.3.10.(2)(a)

**Intent(s)**

*Intent 1.* To exempt urinals from the requirement for a greater minimum width as stated in Sentence 3.8.1.3.(1) and permit a lesser minimum width, on the basis that urinals need not be wider to allow proper usage by persons using manual wheelchairs or other manual mobility assistance devices.

---

**Provision: 3.8.3.11.(1)**

---

**Objective**

OA2

**Attributions**

[F74-OA2]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to use a lavatory in a barrier-free washroom without the assistance of another person.

*Intent 2.* [Subclause (c)(i)] To exempt lavatories from the requirement for a greater minimum width as stated in Sentence 3.8.1.3.(1) and permit a lesser minimum width, on the basis that lavatories need not be wider to allow proper usage by persons using manual wheelchairs or other manual mobility assistance devices.

---

**Objective**

OH2

**Attributions**

[F71-OH2.3]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to wash their hands after using the washroom facilities without the assistance of another person, which could lead to unsanitary conditions, which could lead to harm to persons.

*Intent 2.* [Subclause (c)(i)] To exempt lavatories from the requirement for a greater minimum width as stated in Sentence 3.8.1.3.(1) and permit a lesser minimum width, on the basis that lavatories need not be wider to allow proper usage by persons using manual wheelchairs or other manual mobility assistance devices.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS3

### **Attributions**

3.8.3.11.(1)(d) [F31-OS3.2]

### **Intent(s)**

*Intent 1.* To limit the probability that the legs or knees of a person using a manual wheelchair will come into contact with a hot pipe, which could lead to burning or scalding, which could lead to harm to the person.

---

### **Provision: 3.8.3.11.(2)**

---

### **Objective**

OA2

### **Attributions**

[F74-OA2]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to use a mirror without the assistance of another person.

---

### **Provision: 3.8.3.12.(1)**

---

### **Objective**

OA2

### **Attributions**

[F74-OA2]

### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will be unable to access and make use of a water closet and lavatory.

*Intent 2.* To limit the probability that the only barrier-free washroom facilities will be located in single sex washrooms, which could lead to the inability of a caregiver of the opposite sex to provide assistance to a person using a manual wheelchair or other manual mobility assistance device who needs to use a washroom.

---

### **Objective**

OS3

### **Attributions**

3.8.3.12.(1)(b) [F10-OS3.7]

### **Intent(s)**

*Intent 1.* To limit the probability that a person with a physical disability will not be able to quickly egress a washroom in an emergency situation, which could lead to delays in evacuation or movement to a safe place, which could lead to harm to the person.

---

### **Attributions**

3.8.3.12.(1)(c)

**Intent(s)**

*Intent 1.* To expand the application of Article 3.8.3.11. to a lavatory in a universal toilet room.

---

**Attributions**

3.8.3.12.(1)(d)

**Intent(s)**

*Intent 1.* To expand the application of Article 3.8.3.9. to a water closet installed in a universal toilet room.

---

**Attributions**

3.8.3.12.(1)(e)

**Intent(s)**

*Intent 1.* To expand the application of Clause 3.8.3.8.(1)(d) to grab bars installed in universal toilet rooms.

---

**Objective**

OS3

**Attributions**

3.8.3.12.(1)(g) [F30-OS3.1] Applies to the requirement for a coat hook.

**Intent(s)**

*Intent 1.* To limit the probability that a coat hook will project excessively into the stall or enclosure space, which could lead to a person hitting themselves on the coat hook, which could lead to harm to the person.

*Intent 2.* To expand the application of Clause 3.8.3.8.(1)(e) to universal toilet rooms.

---

**Objective**

OA2

**Attributions**

3.8.3.12.(1)(g) [F74-OA2] Applies to the requirement for a shelf.

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not have a shelf on which to place personal items while making use of a washroom.

---

**Objective**

OH2

**Attributions**

[F72-OH2.1] [F71-OH2.3]

**Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will be unable to access and use:

- a water closet, which could lead to unsanitary conditions, which could lead to harm to persons, and
- a lavatory, which could lead to an inability to maintain personal hygiene, which could lead to harm to persons.

*Intent 2.* To limit the probability that the only barrier-free washroom facilities will be located in single sex washrooms, which could lead to the inability of a caregiver of the opposite sex to provide assistance

---

## **Intent Statements: NBC 2010**

to a person using a manual wheelchair or other manual mobility assistance device who needs to use a washroom, which could lead to unsanitary conditions, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 3.8.3.14.(4)**

---

#### **Intent(s)**

*Intent 1.* To exempt counters from the requirements of Sentence 3.8.3.14.(3), which would otherwise require knee space, on the basis that movement takes place parallel to the counter.

### **Provision: 3.8.3.15.(1)**

---

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to make use of a telephone and telephone counter without the assistance of another person.

### **Provision: 3.8.3.15.(2)**

---

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to make use of a telephone shelf or counter.

### **Provision: 3.8.3.15.(3)**

---

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to make use of a public telephone without the assistance of another person.

### **Provision: 3.8.3.16.(1)**

---

#### **Objective**

OA2

#### **Attributions**

[F74-OA2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a person using a manual wheelchair or other manual mobility assistance device will not be able to make use of a drinking fountain without the assistance of another person.

**Provision: 3.8.3.17.(1)**

---

**Objective**

OA2

**Attributions**

[F74-OA2]

**Intent(s)**

*Intent 1.* To limit the probability that a bathtub will not be provided for a person using a manual wheelchair or other manual mobility assistance device, which could lead to the person not being able to bathe without the assistance of another person.

---

**Attributions**

3.8.3.17.(1)(b)

**Intent(s)**

*Intent 1.* To expand the application of Article 3.7.2.9. to bathtubs installed in suites of residential occupancy required to be barrier-free.

---

**Attributions**

3.8.3.17.(1)(a)

**Intent(s)**

*Intent 1.* To expand the application of Sentence 3.8.3.12.(1) to bathtubs installed in suites of residential occupancy required to be barrier-free.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 4.1.1.1.(1)**

---

#### **Intent(s)**

*Intent 1.* To direct Code users to a Section of the Code containing detailed information on the application of Part 4.

---

### **Provision: 4.1.1.2.(1)**

---

#### **Intent(s)**

*Intent 1.* To direct the Code users to Part 1 of Division A, which contains definitions of selected words used in the Code.

---

### **Provision: 4.1.1.3.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the loads and influences that may reasonably be anticipated during construction and during the expected service life of the building will produce forces that may exceed the capacities of the structure and its components, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that an accident either during construction or during the expected service life of the building that results in local failure will, because of the lack of structural integrity, lead to widespread collapse, which could lead to harm to persons.

---

### **Provision: 4.1.1.3.(2)**

---

#### **Objective**

OP2

#### **Attributions**

[F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the maximum expected loads will lead to the excessive deformation of, or excessive stress in, the structural elements of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that the maximum expected loads--dynamic as well as static--will lead to the excessive deflection or excessive vibration of structural elements, which could impede the intended use and occupancy of the building.

---

#### **Objective**

OH4

#### **Attributions**

[F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that the maximum expected loads--dynamic as well as static--will lead to the excessive deflection or excessive vibration of the structural elements, which could lead to negative effects on the psychological well-being of persons.

**Provision: 4.1.1.3.(3)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1] Applies to structural members where temporary overloading during construction may result in impairment of that or any other member.

**Intent(s)**

*Intent 1.* To limit the probability that the loads applied during construction will exceed the specified construction loads, which could exceed the capacities of the structure, including temporary supports, which could lead to structural failure, which could lead to harm to persons.

---

**Intent(s)**

*Intent 1.* To exempt from the application of Sentence 4.1.1.3.(3) the overloading of structural members during the construction phase if such overloading has been shown by analysis or test not to have detrimental effects.

**Provision: 4.1.1.3.(4)**

---

**Objective**

OS2

**Attributions**

[F20, F80, F82-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability of inadequate design of the temporary support structures of a building, which could lead to structural failure, which could lead to harm to persons.

**Provision: 4.1.1.3.(5)**

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that construction loads will lead to excessive deformation of or excessive stress on the structure, which could lead to damage to the building.

---

**Objective**

OS2

**Attributions**

[F20-OS2.3, OS2.4]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that construction loads will lead to damage or permanent distortion of the building, which could lead to structural collapse either during construction or during use of the building, which could lead to harm to persons.

### **Provision: 4.1.1.4.(1)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to the requirements regarding structural drawings and related documents stated in Subsection 2.2.4.

### **Provision: 4.1.1.5.(1)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to the requirements in Part 4 for the design of buildings and their structural components.

### **Provision: 4.1.1.5.(2)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1] [F22-OS2.4, OS2.5]

### **Intent(s)**

*Intent 1.* To limit the probability that the building and its structural elements will not be designed in accordance with an acceptable method that will provide equivalent levels of safety and performance as the requirements in Part 4 do, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4, OP2.5]

### **Intent(s)**

*Intent 1.* To limit the probability that the building and its structural elements will not be designed in accordance with an acceptable method that will provide equivalent levels of safety and performance as the requirements in Part 4 do, which could lead to:

- the excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building, and
- the excessive deflection or excessive vibration of structural components, which could impede the intended use and occupancy of the building.

---

### **Objective**

OH4

### **Attributions**

[F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that the building and its structural elements will not be designed in accordance with an acceptable method that will provide equivalent levels of safety and performance as the requirements in Part 4 do, which could lead to the excessive deflection or excessive vibration of the structural components, which could lead to negative effects on the psychological well-being of persons.

---

**Provision: 4.1.2.1.(1)**

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the loads specified in Sentence 4.1.2.1.(1) will not be taken into account in the design of the building and its structural components, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the loads specified in Sentence 4.1.2.1.(1) will not be taken into account in the design of the building and its structural components, which could lead to:

- the excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building, or
- the excessive deflection or excessive vibration of structural components, which could impede the intended use and occupancy of the building.

---

**Objective**

OH4

**Attributions**

[F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that the loads specified in Sentence 4.1.2.1.(1) will not be taken into account in the design of the building and its structural components, which could lead to the excessive vibration or excessive deflection of the structural components, which could lead to negative effects on the psychological well-being of persons.

---

**Provision: 4.1.2.1.(2)**

**Objective**

OS2

**Attributions**

[F20-OS2.1]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that the design of the building and its structural components will not take into account the dynamic effects of rapidly fluctuating or impulsive loads on the component forces and displacements determined by conventional static structural analysis, which could lead to structural failure, which could lead to harm to persons.

---

### **Provision: 4.1.2.1.(3)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the building and its structural components will not have sufficient capacity or stability to resist the maximum expected loads as they occur in their expected combinations and taking into account the risk of harm to persons depending on the use of the building, which could lead to structural failure, which could lead to harm to persons.

---

### **Provision: 4.1.2.2.(1)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that expected loads, other than those listed in Article 4.1.2.1., will not be taken into account in the design of the structural components of the building, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that expected loads, other than those listed in Article 4.1.2.1., will not be taken into account in the design of the structural components of the building, which could lead to:

- excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building, and
- excessive deflection or excessive vibration of structural components, which could impede the intended use and occupancy of the building.

---

#### **Objective**

OH4

#### **Attributions**

[F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that expected loads, other than those listed in Article 4.1.2.1., will not be taken into account in the design of the structural components of the building, which could lead to excessive deflection or excessive vibration of the structural components, which could lead to negative effects on the psychological well-being of persons.

**Provision: 4.1.3.1.(1)**

---

**Intent(s)**

*Intent 1.* To define the limit states design terms and symbols used in Subsection 4.1.3.

**Provision: 4.1.3.2.(1)**

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the capacities of the structural components and the stability of the building and its parts will not be sufficient to resist the forces due to the maximum expected loads, which could lead to excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the capacities of the structural components and the stability of the building and its parts will not be sufficient to resist the forces due to the maximum expected loads, which could lead to structural failure, which could lead to harm to persons.

**Provision: 4.1.3.2.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

[F22-OS2.4, OS2.5] Applies to the stabilizing resistance of the *dead load*.

**Intent(s)**

*Intent 1.* To limit the probability that the load combinations used for the structural design will not take into account the maximum expected loads as they occur in their expected combinations, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the expected counteracting loads will create a force that exceeds the stabilizing resistance of the dead load, which could lead to overturning, uplift or structural failure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4, OP2.5]

### **Intent(s)**

*Intent 1.* To limit the probability that the load combinations used for the structural design will not take into account the maximum expected loads as they occur in their expected combinations, which could lead to the excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

---

### **Provision: 4.1.3.2.(3)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

[F22-OS2.4, OS2.5] Applies to the stabilizing resistance of the *dead load*.

### **Intent(s)**

*Intent 1.* To limit the probability that the load combinations used for the structural design will not take into account the case of the principal load acting alone, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the expected counteracting loads will create a force that exceeds the stabilizing resistance of the dead load for the case of the principal load acting alone, which could lead to overturning, uplift or structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4, OP2.5]

### **Intent(s)**

*Intent 1.* To limit the probability that the load combinations used for the structural design will not take into account the case of the principal load acting alone, which could lead to the excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

---

### **Provision: 4.1.3.2.(4)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the effects of contraction or expansion caused by temperature changes, shrinkage, moisture changes, creep in component materials, movement due to differential settlement, and lateral earth pressure as well as the effects of pre-stress will not be taken into account in the structural design, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the effects of contraction or expansion caused by temperature changes, shrinkage, moisture changes, creep in component materials, movement due to differential settlement, and lateral earth pressure as well as the effects of pre-stress will not be taken into account in the structural design, which could lead to structural failure, which could lead to damage to the building.

**Provision: 4.1.3.2.(5)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1] [F22-OS2.4, OS2.5]

**Intent(s)**

*Intent 1.* To limit the probability that the counteracting factored dead load used for the structural design of buildings and their structural elements will not be adequate to resist overturning, uplift, sliding, and failure due to stress reversal, and to determine anchorage requirements and factored member resistances, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4, OP2.5]

**Intent(s)**

*Intent 1.* To limit the probability that the counteracting factored dead load used for the structural design of buildings and their structural elements will not be adequate for the determination of anchorage requirements and factored member resistances, which could lead to the excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

**Provision: 4.1.3.2.(6)**

---

**Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.3.2.(2) and allow a reduction of the principal-load factor for the live load for liquids in tanks, on the basis that tanks limit the amount of liquid that can be contained in them, thereby making the determination of their weight more certain than for other live loads.

**Provision: 4.1.3.2.(7)**

---

**Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.3.2.(2) and require an increase in the companion-load factor for the live load for storage occupancies, equipment areas and service rooms, on the basis that it

---

## **Intent Statements: NBC 2010**

is more likely that this full live load will be realized concurrent with the design snow, wind, or earthquake load.

### **Provision: 4.1.3.2.(8)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that dead load due to soil, superimposed earth, plants and trees will not be taken into account in the structural design, with respect to how these loads impact on the total load, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To allow a reduction in the dead load factor for soil, superimposed earth, plants and trees, where the depth of the soil is greater than 1.2 m, on the basis that a slight variation in the depth will not have as big an impact on the total load.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that dead load due to soil, superimposed earth, plants and trees will not be taken into account in the structural design, with respect to how these loads impact on the total load, which could lead to the excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

*Intent 2.* To allow a reduction in the dead load factor for soil, superimposed earth, plants and trees, where the depth of the soil is greater than 1.2 m, on the basis that a slight variation in the depth will not have as big an impact on the total load.

### **Provision: 4.1.3.2.(9)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the dead load due to saturated soil, superimposed earth, plants and trees when acting as the principal load without companion loads will not be taken into account in the structural design, with respect to how these loads impact on the total load, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the dead load due to saturated soil, superimposed earth, plants and trees when acting as the principal load without companion loads will not be taken into account in the structural design, with respect to how these loads impact on the total load, which could lead to the excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

**Provision: 4.1.3.2.(10)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Sentence 4.1.8.16.(4) for earthquake load combinations, where H due to E is taken into account in accordance with that Sentence.

**Provision: 4.1.3.2.(11)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1] [F22-OS2.4, OS2.5]

**Intent(s)**

*Intent 1.* To limit the probability that the maximum expected vertical forces acting on the structure will cause large displacements of the structural system as a whole or in part, or that maximum expected compressive forces acting on structural components will cause component buckling, which could lead to structural failure, which could lead to harm to persons.

**Provision: 4.1.3.2.(12)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the vertical loads acting on the structure in its laterally-displaced configuration will not be taken into account in the analysis of the building structure, which could lead to substantial forces on the structure being overlooked in the design, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the vertical loads acting on the structure in its laterally-displaced configuration will not be taken into account in the analysis of the building structure, which could lead to substantial forces on the structure being overlooked in the design, which could lead to excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.3.3.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that dynamic loads due to use and occupancy, or wind, will lead to crack growth due to fatigue, which could lead to a reduction in the capacity of the structural elements of buildings such that they will be unable to resist the forces due to the maximum expected loads, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that dynamic loads due to use and occupancy, or wind, will lead to crack growth due to fatigue, which could lead to the excessive deformation of, or excessive stress in, the structural elements of the building, which could lead to damage to the building.

### **Provision: 4.1.3.3.(2)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the dynamic structural effect of dynamic forces from machinery and equipment will not be taken into account in the design of the supporting structure, which could lead to structural failure, including structural failure caused by fatigue, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.4] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the dynamic structural effect of dynamic forces from machinery and equipment will not be taken into account in the design of the supporting structure, which could lead to:

- excessive stress in structural elements, which could lead to damage to the building, or
- excessive vibration of structural elements, which could impede the intended use and occupancy of the building.

---

**Objective**

OH4

**Attributions**

[F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that the dynamic structural effect of dynamic forces from machinery and equipment will not be taken into account in the design of the supporting structure, which could lead to the excessive vibration of structural elements, which could lead to negative effects on the psychological well-being of persons.

---

**Provision: 4.1.3.4.(1)**

---

**Objective**

OP2

**Attributions**

[F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the maximum expected loads will lead to the excessive deformation of the structural elements of the building, which could lead to damage to the building.

*Intent 2.* To limit the probability that the maximum expected loads--dynamic as well as static--will lead to the excessive deflection or excessive vibration of structural elements, which could impede the intended use and occupancy of the building.

---

**Objective**

OH4

**Attributions**

[F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that the maximum expected loads--dynamic as well as static--will lead to the excessive vibration or excessive deflection of the structural elements, which could lead to negative effects on the psychological well-being of persons.

---

**Provision: 4.1.3.5.(1)**

---

**Objective**

OP2

**Attributions**

4.1.3.5.(1)(b), 4.1.3.5.(1)(c), 4.1.3.5.(1)(d) [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability of the excessive deflection or excessive vibration of the structural elements, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP2

### **Attributions**

[F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability of the excessive deflection of the structural elements, which could impede the intended use and occupancy of the building.

---

### **Objective**

OH4

### **Attributions**

[F22-OH4]

### **Intent(s)**

*Intent 1.* To limit the probability of the excessive deflection of the structural elements of the building, which could lead negative effects on the psychological well-being of persons.

### **Provision: 4.1.3.5.(2)**

---

### **Objective**

OS2

### **Attributions**

[F22-OS2.3, OS2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that wind and gravity loads will lead to the excessive lateral deflection of the building structure, which could lead to damage to or displacement of non-structural elements, which could lead to their subsequently falling, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that wind and gravity loads will lead to the excessive lateral deflection of the building structure, which could lead to damage to the building.

### **Provision: 4.1.3.5.(3)**

---

### **Objective**

OP2

### **Attributions**

[F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that wind and gravity loads will lead to the excessive lateral deflection of the building structure between storeys (storey drift), which could lead to damage to the building.

---

**Provision: 4.1.3.5.(4)**

---

**Intent(s)**

*Intent 1.* To exempt industrial buildings and sheds from the 1/500 storey drift limitation stated in Sentence 4.1.3.5.(3), in cases where exceeding that limit will not negatively affect the building.

---

**Provision: 4.1.3.5.(5)**

---

**Objective**

OS2

**Attributions**

[F22-OS2.3, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the lateral deflection and distortion of the building structure due to the maximum expected seismic ground motions will damage or displace attached or adjacent components of the building, which could subsequently fall or slide, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F22-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the lateral deflection and distortion of the building structure due to the maximum expected seismic ground motions will lead to:

- damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

**Provision: 4.1.3.6.(1)**

---

**Objective**

OP2

**Attributions**

[F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability of excessive vibrations in the floor system, which could impede the use of the floor for the intended use and occupancy [e.g. for vibration-sensitive processes or equipment].

---

**Objective**

OH4

**Attributions**

[F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability of excessive vibrations in the floor system, which could lead to negative effects on the psychological well-being of persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.3.6.(2)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the dynamic structural effect of dynamic forces from rhythmic activities on floor systems, whose fundamental vibration frequency is such that large resonant vibrations are likely to occur, will not be taken into account in the design of the supporting structure, which could lead to structural failure, including structural failure caused by fatigue, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.4] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the dynamic structural effect of dynamic forces from rhythmic activities on floor systems, whose fundamental vibration frequency is such that large resonant vibrations are likely to occur, will not be taken into account in the design of the supporting structure, which could lead to:

- the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building, or
- the excessive vibration of structural elements, which could impede the intended use and occupancy of the building.

---

#### **Objective**

OH4

#### **Attributions**

[F22-OH4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the dynamic structural effect of dynamic forces from rhythmic activities will not be taken into account in the design of the supporting structure, which could lead to the excessive vibration of the floor structure, which could lead to negative effects on the psychological well-being of persons.

### **Provision: 4.1.3.6.(3)**

---

#### **Intent(s)**

*Intent 1.* To direct Code users to Sentence 4.1.7.2.(1) for design requirements for the dynamic effects of wind.

### **Provision: 4.1.4.1.(1)**

---

**Intent(s)**

*Intent 1.* To clarify the definition of dead load.

**Provision: 4.1.4.1.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that dead load due to temporary or future partitions, other than permanent partitions shown on the drawings, will not be taken into account in the structural design, which could lead to structural failure, which could lead to harm to persons.

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that dead load due to temporary or future partitions, other than permanent partitions shown on the drawings, will not be taken into account in the structural design, which could lead to:

- excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building, and
- excessive deflection or excessive vibration of structural members, which could impede the intended use and occupancy of the building.

**Provision: 4.1.4.1.(3)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that:

- the dead load due to partitions not shown on the drawings, including temporary or future partitions, will not be taken into account in the structural design, and
- the load allowance for the dead load due to partitions not shown on the drawings, including temporary or future partitions, will be less than the accepted minimum value.

This is to limit the probability of structural failure, which could lead to harm to persons.

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that:

- the dead load due to partitions not shown on the drawings, including temporary or future partitions, will not be taken into account in the structural design, and
- the load allowance for the dead load due to partitions not shown on the drawings, including temporary or future partitions, will be less than the accepted minimum value.

This is to limit the probability of:

- excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building, and
- excessive deflection or excessive vibration of the building structure, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.4.1.(4)**

### **Intent(s)**

*Intent 1.* To facilitate determination of compliance with the structural design of the building.

---

### **Provision: 4.1.4.1.(5)**

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that counteracting temporary or future partition loads will be included in the design calculations, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that counteracting temporary or future partition loads will be included in the design calculations, which could lead to the excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

---

### **Provision: 4.1.4.1.(6)**

### **Objective**

OS2

### **Attributions**

[F20-OS2.1] [F22-OS2.4, OS2.5]

### **Intent(s)**

*Intent 1.* To limit the probability that counteracting loads due to soil, superimposed earth, plants and trees, which could be removed in the future, will be included in the design calculations, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To exempt from the application of this requirement counteracting dead load due to soil for structures that traditionally employ the dead load of soil to resist loadings.

---

**Provision: 4.1.5.1.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the live load due to use and occupancy, which is used for the design of structural elements, will not take into account the most critical of the uniformly distributed specified live load, the live load resulting from the intended use or the concentrated specified live load, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to Sentence 4.1.5.3.(1) for specified uniformly distributed live load due to use and occupancy, and to Sentence 4.1.5.9.(1) for specified concentrated live load due to use and occupancy.

*Intent 3.* To direct Code users to Sentence 4.1.5.1.(2) for buildings in the Low Importance Category according to Table 4.1.2.1.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the live load due to use and occupancy, which is used for the design of structural elements, will not take into account the most critical of the uniformly distributed specified live load, the live load resulting from the intended use or the concentrated specified live load, which could lead to:

- the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building, or
- the excessive deflection or excessive vibration of structural elements, which could impede the intended use and occupancy of the building.

*Intent 2.* To direct Code users to Sentence 4.1.5.3.(1) for specified uniformly distributed live load due to use and occupancy, and to Sentence 4.1.5.9.(1) for specified concentrated live load due to use and occupancy.

*Intent 3.* To direct Code users to Sentence 4.1.5.1.(2) for buildings in the Low Importance Category according to Table 4.1.2.1.

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that the live load due to use and occupancy, which is used for the design of structural elements, will not take into account the most critical of the uniformly distributed specified live load, the live load resulting from the intended use or the concentrated specified live load, which could lead to the excessive deflection or excessive vibration of structural elements, which could lead to negative effects on the psychological well-being of persons.

*Intent 2.* To direct Code users to Sentence 4.1.5.3.(1) for specified uniformly distributed live load due to use and occupancy, and to Sentence 4.1.5.9.(1) for specified concentrated live load due to use and occupancy.

*Intent 3.* To direct Code users to Sentence 4.1.5.1.(2) for buildings in the Low Importance Category according to Table 4.1.2.1.

---

### **Provision: 4.1.5.1.(2)**

### **Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.5.1.(1) and allow a reduction of the live load for buildings that represent a low direct or indirect hazard to human life in the event of failure.

---

### **Provision: 4.1.5.2.(1)**

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the live load, which is used for the design of structural elements, on a floor or roof area intended for a use not included in Articles 4.1.5.3. and 4.1.5.9., will not take into account the maximum expected accumulation of weight due to people and objects, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to Sentence 4.1.5.2.(2) for buildings in the Low Importance Category according to Table 4.1.2.1.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the live load, which is used for the design of structural elements, on a floor or roof area intended for a use not included in Articles 4.1.5.3. and 4.1.5.9., will not take into account the maximum expected accumulation of weight due to people and objects, which could lead to:

- the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building, or
- the excessive deflection or excessive vibration of structural elements, which could impede the intended use and occupancy of the building.

*Intent 2.* To direct Code users to Sentence 4.1.5.2.(2) for buildings in the Low Importance Category according to Table 4.1.2.1.

---

**Objective**

OH4

[F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that the live load, which is used for the design of structural elements, on a floor or roof area intended for a use not included in Articles 4.1.5.3. and 4.1.5.9., will not take into account the maximum expected accumulation of weight due to people and objects, which could lead to the excessive vibration or excessive deflection of structural elements, which could lead to negative effects on the psychological well-being of persons.

*Intent 2.* To direct Code users to Sentence 4.1.5.2.(2) for buildings in the Low Importance Category according to Table 4.1.2.1.

---

**Provision: 4.1.5.2.(2)**

---

**Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.5.2.(1) and allow a reduction of the live load for buildings that represent a low direct or indirect hazard to human life in the event of failure.

---

**Provision: 4.1.5.3.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that:

- the live load due to use and occupancy will not take into account the expected accumulation and distribution of people and objects on the floor or roof surface, including an allowance for dynamic effects due to people, and
- the live load due to use and occupancy will be less than the prescribed minimum value.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that:

- the live load due to use and occupancy will not take into account the expected accumulation and distribution of people and objects on the floor or roof surface, including an allowance for dynamic effects due to people, and

---

## **Intent Statements: NBC 2010**

- the live load due to use and occupancy will be less than the prescribed minimum value.

This is to limit the probability of:

- the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building, or
- the excessive deflection or excessive vibration of structural elements, which could impede the intended use and occupancy of the building.

---

### **Objective**

OH4

### **Attributions**

[F22-OH4]

### **Intent(s)**

*Intent 1.* To limit the probability that:

- the live load due to use and occupancy will not take into account the expected accumulation and distribution of people and objects on the floor or roof surface, including an allowance for dynamic effects due to people, and
- the live load due to use and occupancy will be less than the prescribed minimum value.

This is to limit the probability of the excessive deflection or excessive vibration of structural elements, which could lead to negative effects on the psychological well-being of persons.

---

## **Provision: 4.1.5.4.(1)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the live load due to use and occupancy for corridors, lobbies and aisles not more than 1200 mm wide, all corridors above the first storey of residential areas of apartments, hotels and motels, and interior balconies and mezzanines, that cannot be used by an assembly of people as a viewing area, will be less than the accepted minimum value, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the live load due to use and occupancy for corridors, lobbies and aisles not more than 1200 mm wide, all corridors above the first storey of residential areas of apartments, hotels and motels, and interior balconies and mezzanines, that cannot be used by an assembly of people as a viewing area, will be less than the accepted minimum value, which could lead to:

- excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building, and
- excessive deflection or excessive vibration of structural members, which could impede the intended use and occupancy of the building.

---

**Objective**

OH4

[F20-OP2.1, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the dynamic structural effect of horizontal dynamic forces parallel to the rails due to the operation of cranes will not be taken into account in the design of crane runway structures, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.5.12.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the live load for the design of structural elements supporting bleachers will not take into account the maximum expected accumulation of weight due to people sitting on the bleachers, including an allowance for the dynamic effect of people, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the live load for the design of structural elements supporting bleachers will not take into account the maximum expected accumulation of weight due to people sitting on the bleachers, including an allowance for the dynamic effect of people, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

### **Provision: 4.1.5.12.(2)**

---

#### **Intent(s)**

*Intent 1.* To facilitate the determination of compliance with the requirements of Part 4, particularly Sentence 4.1.5.10.(1).

### **Provision: 4.1.5.12.(3)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that loads generated by human activities will lead to structural failure, which could lead to harm to persons.

### **Provision: 4.1.5.13.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the live load for the design of structural elements supporting helicopter landing areas on roofs will not take into account the maximum expected static and dynamic loads applied to the roof by helicopters, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the live load for the design of structural elements supporting helicopter landing areas on roofs will not take into account the maximum expected static and dynamic loads applied to the roof by helicopters, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

---

**Provision: 4.1.5.14.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the horizontal load for the design of a guard and its supporting elements will not take into account the maximum expected horizontal forces exerted by persons based on the use and occupancy of the guarded area, which could lead to structural failure, which could lead to harm to persons.

---

**Provision: 4.1.5.14.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the horizontal concentrated load for the design of individual elements within the guard, including solid panels and pickets, will not take into account the maximum expected force exerted by a person over a reasonable contact area, which could lead to the structural failure or displacement of the element, which could lead to harm to persons.

---

**Provision: 4.1.5.14.(3)**

---

**Intent(s)**

*Intent 1.* To clarify that loads acting on individual elements within the guard need not be combined with those specified in Sentences 4.1.5.14.(1) and 4.1.5.14.(4), which act on the guard itself.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.5.14.(4)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the vertical load for the design of a guard and its supporting structure will not take into account the maximum expected weight of persons sitting on the guard, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To clarify that the loads applied vertically at the top of every guard need not be combined with the loads applied horizontally at the top of every guard as specified in Sentence 4.1.5.14.(1).

### **Provision: 4.1.5.14.(5)**

---

#### **Intent(s)**

*Intent 1.* To direct Code users to Sentence 3.4.6.5.(12) for design loads for handrails and their supporting elements.

### **Provision: 4.1.5.15.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the horizontal load for the design of a vehicle guardrail, its connections and supporting structure, will not take into account the maximum expected force due to the impact of a vehicle, which could lead to structural failure, which could lead to harm to persons.

### **Provision: 4.1.5.16.(1)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that the lateral support of firewalls will not be sufficient under fire conditions, which could lead to the structural failure of or damage to the firewalls, which could lead to the spread of fire, which could lead to harm to persons on the other side of the firewalls.

---

### **Objective**

OP1

### **Attributions**

[F04-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that the lateral support of firewalls will not be sufficient under fire conditions, which could lead to the structural failure of or damage to the firewalls, which could lead to the spread of fire from an adjacent building to the building, which could lead to damage to the building.

---

### **Objective**

OP3

### **Attributions**

[F04-OP3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the lateral support of firewalls will not be sufficient under fire conditions, which could lead to the structural failure of or damage to the firewalls, which could lead to the spread of fire from the building to an adjacent building, which could lead to damage to adjacent buildings.

---

## **Provision: 4.1.6.1.(1)**

---

### **Intent(s)**

*Intent 1.* To clarify that the specified load on a roof due to rain or to snow and associated rain shall be the greater of the snow and associated rain load stated in Article 4.1.6.2. and the rain load stated in Article 4.1.6.4.

---

## **Provision: 4.1.6.2.(1)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the calculation of snow load will not take into account all the factors that affect the accumulation and distribution of snow on roofs or other building surfaces subject to snow accumulation, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the ground snow load and associated rain load values will not be compatible with the geographic characteristics by directing Code users to Sentence 1.1.3.1.(1) [Appendix Appendix C Division A], which could lead to structural failure, which could lead to harm to persons.

*Intent 3.* To limit the probability that the calculation of snow load used for the design will not take into account the level of reliability appropriate for the use and occupancy, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the calculation of snow load will not take into account all the factors that affect the accumulation and distribution of snow on roofs or other building surfaces subject to snow accumulation, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

*Intent 2.* To limit the probability that the ground snow load and associated rain load values will not be compatible with the geographic characteristics by directing Code users to Sentence 1.1.3.1.(1) [Appendix Appendix C Division A], which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

*Intent 3.* To limit the probability that the calculation of snow load used for the design will not take into account the level of reliability appropriate for deflection serviceability, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

---

**Provision: 4.1.6.2.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the basic roof snow load factor for large roofs will not take into account the fact that, compared to snow accumulation on the ground, wind will not significantly remove snow from large roofs, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the basic roof snow load factor for large roofs will not take into account the fact that, compared to snow accumulation on the ground, wind will not significantly remove snow from large roofs, which could lead to the excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.6.2.(3)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the wind exposure factor will not take into account the wind-related site conditions affecting the maximum expected accumulation of snow on roofs or other building surfaces subject to snow accumulation, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the wind exposure factor will not take into account the wind-related site conditions affecting the maximum expected accumulation of snow on roofs or other building surfaces subject to snow accumulation, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

### **Provision: 4.1.6.2.(4)**

---

#### **Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.6.2.(3) and allow a reduction of the wind exposure factor where site wind conditions reduce the maximum expected accumulation of snow on roofs or other building surfaces subject to snow accumulation from that corresponding to a wind exposure factor of 1.0.

### **Provision: 4.1.6.2.(5)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the slope factor will not take into account the site conditions affecting the maximum expected accumulation of snow on roofs, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the slope factor will not take into account the site conditions affecting the maximum expected accumulation of snow on roofs, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

**Provision: 4.1.6.2.(6)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the slope factor will not take into account the site conditions affecting the maximum expected accumulation of snow on unobstructed slippery sloped roofs, which could lead to structural failure, which could lead to harm to persons.

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the slope factor will not take into account the site conditions affecting the maximum expected accumulation of snow on unobstructed slippery sloped roofs, which could lead to the excessive deformation of, or excessive stress in, the structural components, which could lead to damage to the building.

**Provision: 4.1.6.2.(7)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the slope factor will not take into account the site conditions affecting the maximum expected accumulation of snow on sloped roofs where the roof configuration prevents snow from sliding off the roof, which could lead to structural failure, which could lead to harm to persons.

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the slope factor will not take into account the site conditions affecting the maximum expected accumulation of snow on sloped roofs where the roof configuration prevents

---

## **Intent Statements: NBC 2010**

snow from sliding off the roof, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

---

### **Provision: 4.1.6.2.(8)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1] Applies to portion of Code text: "The shape factor,  $C_a$ , shall be 1.0, ..."

#### **Intent(s)**

*Intent 1.* To limit the probability that the shape factor will not take into account the roof configuration affecting the maximum expected accumulation of snow on roof areas, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the value of the shape factor used for roof areas will be less than 1.0 where not warranted, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4] Applies to portion of Code text: "The shape factor,  $C_a$ , shall be 1.0,..."

#### **Intent(s)**

*Intent 1.* To limit the probability that the shape factor will not take into account the roof configuration affecting the maximum expected accumulation of snow on roof areas, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

*Intent 2.* To limit the probability that the value of the shape factor used for roof areas will be less than 1.0 where not warranted, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

---

#### **Objective**

OS2

#### **Attributions**

4.1.6.2.(8)(a) to 4.1.6.2.(8)(e) [F20-OS2.1] Applies to roof shapes and configurations that call for a higher shape factor.

#### **Intent(s)**

*Intent 1.* To limit the probability that the shape factor will not take into account the roof configuration affecting the maximum expected accumulation of snow on local areas of the roof, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

4.1.6.2.(8)(a) to 4.1.6.2.(8)(e) [F20-OP2.1] [F22-OP2.4] Applies to roof shapes and configurations that call for a higher shape factor.

#### **Intent(s)**

*Intent 1.* To limit the probability that the shape factor will not take into account the roof configuration affecting the maximum expected accumulation of snow on local areas of the roof, which could lead to

the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

**Provision: 4.1.6.3.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the distribution of snow load will not take into account the maximum expected snow accumulation over the whole span of structural elements supporting the roof, which could lead to high stresses in these elements, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the distribution of snow load will not take into account the maximum expected snow accumulation over the whole span of structural elements supporting the roof, which could lead to high stresses in these elements, which could lead to the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building.

**Provision: 4.1.6.3.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the distribution of snow load on flat roofs or nearly flat shed or gable roofs, and on arched or curved roofs, which is used for the design of structural elements supporting these types of roofs, will not take into account the expected non-uniform distribution of snow accumulation caused by wind effects and snow removal, which could lead to high forces in critical components of these elements, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the distribution of snow load on flat roofs or nearly flat shed or gable roofs, and on arched or curved roofs, which is used for the design of structural elements supporting

---

## **Intent Statements: NBC 2010**

these types of roofs, will not take into account the expected non-uniform distribution of snow accumulation caused by wind effects and snow removal, which could lead to high forces in critical components of these elements, which could lead to excessive stress in structural elements, which could lead to damage to the building.

---

### **Provision: 4.1.6.4.(1)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the rain load used for the design of structural elements supporting roofs on which rain can accumulate will not take into account the maximum expected accumulation of rainwater on a catchment area of roof, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the one-day rainfall value used will not be compatible with the geographic characteristics by directing Code users to Sentence 1.1.3.1.(1) [Appendix Appendix C Division A], which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the rain load used for the design of structural elements supporting roofs on which rain can accumulate will not take into account the maximum expected accumulation of rainwater on a catchment area of roof, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

*Intent 2.* To limit the probability that the one-day rainfall value used will not be compatible with the geographic characteristics by directing Code users to Sentence 1.1.3.1.(1) [Appendix Appendix C Division A], which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

---

### **Provision: 4.1.6.4.(2)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the rain load described in Sentence 4.1.6.4.(1), which is used for the design of structural elements supporting a roof area on which rain can accumulate, will not take into account the maximum expected accumulation of rainwater on the roof when drainage systems, such as rainwater leaders, are blocked by debris, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the rain load described in Sentence 4.1.6.4.(1), which is used for the design of structural elements supporting a roof area on which rain can accumulate, will not take into account the maximum expected accumulation of rainwater on the roof when drainage systems, such as rainwater leaders, are blocked by debris, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

---

**Provision: 4.1.6.4.(3)**

---

**Intent(s)**

*Intent 1.* To exempt from the load combinations the consideration of rain load specified in Article 4.1.6.4. as acting in conjunction with the snow load specified in Article 4.1.6.2., on the basis that the specified snow load determined in Article 4.1.6.2. includes the maximum expected rain in snow [see Sentence 4.1.6.2.(1)].

---

**Provision: 4.1.6.4.(4)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the rain load used for the design of structural elements supporting roofs where scuppers are provided and on which rain can accumulate will not take into account the maximum expected accumulation of rainwater on a catchment area of roof, including an allowance for rain accumulation above the scupper level, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the one-day rainfall value used will not be compatible with the geographic characteristics by directing Code users to Sentence 1.1.3.1.(1) [Appendix Appendix C Division A], which could otherwise lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the rain load used for the design of structural elements supporting roofs where scuppers are provided and on which rain can accumulate will not take into account the maximum expected accumulation of rainwater on a catchment area of roof, including an allowance for rain accumulation above the scupper level, which could lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

*Intent 2.* To limit the probability that the one-day rainfall value used will not be compatible with the geographic characteristics by directing Code users to Sentence 1.1.3.1.(1) [Appendix Appendix C Division A], which could otherwise lead to the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building.

---

### **Provision: 4.1.7.1.(1)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the calculation of specified wind pressure or suction on exterior surfaces of buildings will not take into account all the factors that affect the expected maximum magnitude and distribution of wind pressure and suction on the exterior surfaces of buildings, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the calculation of wind load used for the design will not take into account the level of reliability appropriate for the use and occupancy, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the calculation of specified wind pressure or suction on exterior surfaces of buildings will not take into account all the factors that affect the expected maximum magnitude and distribution of wind pressure or suction on exterior surfaces of buildings, which could lead to:

- the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building, or
- the excessive deflection or excessive vibration of the building, which could impede its intended use and occupancy.

*Intent 2.* To limit the probability that the calculation of wind load used for the design of cladding and structural elements for deflection will not take into account the level of reliability appropriate for deflection serviceability, which could lead to:

- the excessive deformation of, or excessive stress in, structural elements, which could lead to damage to the building, or
- the excessive deflection of structural elements, which could impede the intended use and occupancy of the building.

- stack effect due to the difference between the outdoor and indoor temperature, and
- mechanical air pressurization of the building.

This is to limit the probability that the difference in air pressure on opposite sides of a wall or partition will exceed the capacity of the wall or partition, which could lead to the excessive deformation of, or excessive stress in, interior walls and partitions, which could lead to damage to the building.

---

### **Provision: 4.1.8.1.(1)**

---

### **Intent(s)**

*Intent 1.* To state the application of Subsection 4.1.8.

---

### **Provision: 4.1.8.2.(1)**

---

### **Intent(s)**

*Intent 1.* To define the symbols and terms used in Subsection 4.1.8.

---

### **Provision: 4.1.8.3.(1)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to Section 4.3. for requirements regarding design for earthquake.

---

### **Provision: 4.1.8.3.(2)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the design of the structure will not incorporate a systematic approach for transferring inertial forces generated in the more massive portions of the building (e.g. floor slabs) to the supporting ground, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of the structure will not incorporate a systematic approach for transferring inertial forces generated in the more massive portions of the building (e.g. floor slabs) to the supporting ground, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

**Provision: 4.1.8.3.(3)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the building will not have a clearly defined Seismic Force Resisting System, which could lead to insufficient strength to transfer loads to the ground, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the building will not have a clearly defined Seismic Force Resisting System, which could lead to:

- insufficient strength to transfer loads to the ground, and
- insufficient stiffness to maintain lateral deformation within acceptable limits.

This is to limit the probability of:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.8.3.(4)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that elements other than the Seismic Force Resisting System will be relied upon to resist the specified earthquake loads, which could lead to structural failure of the Seismic Force Resisting System, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that elements other than the Seismic Force Resisting System will be relied upon to resist the specified earthquake loads, which could lead to:

- insufficient strength to transfer loads to the ground, and
- insufficient stiffness to maintain lateral deformation within acceptable limits.

This is to limit the probability of the excessive deformation of, or excessive stress in, the Seismic Force Resisting System, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

### **Provision: 4.1.8.3.(5)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the structural framing elements not considered to be part of the Seismic Force Resisting System will not retain their integrity while supporting the gravity loads for which they were designed, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the structural framing elements not considered to be part of the Seismic Force Resisting System will not retain their integrity while supporting the gravity loads for which they were designed, which could lead to:

---

## **Intent Statements: NBC 2010**

- the excessive deformation of, or excessive stress in, the structural framing elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

### **Provision: 4.1.8.3.(6)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that stiff elements that are not considered part of the Seismic Force Resisting System will be subject to loads for which they were not designed, which could lead to:

- stiffening of the structure, which could lead to a change in the dynamic characteristics of the building structure (natural period and mode shapes), which could lead to an increase in the inertial forces in the building structure, and
- inadequate strength in the stiff elements.

This is to limit the probability of structural failure of the stiff elements and the Seismic Force Resisting System, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that stiff elements that are not considered part of the Seismic Force Resisting System will be subject to loads for which they were not designed, which could lead to:

- stiffening of the structure, which could lead to a change in the dynamic characteristics of the building structure (natural period and mode shapes), which could lead to an increase in the inertial forces in the building structure, and
- inadequate strength in the stiff elements.

This is to limit the probability of:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

### **Provision: 4.1.8.3.(7)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that the effects of stiffness of elements not part of the Seismic Force Resisting System on the structure will not be taken into account in the design of the structural elements, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the effects of stiffness of elements not part of the Seismic Force Resisting System on the structure will not be taken into account in the design of the structural elements, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

## **Provision: 4.1.8.3.(8)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that structural modelling will not take into account all factors that affect the magnitude and distribution of building mass and the stiffness of the structural system, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that structural modelling will not take into account all factors that affect the magnitude and distribution of building mass and the stiffness of the structural system, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

**Provision: 4.1.8.4.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the earthquake design and analysis will not take into account the expected hazard results for the location, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the earthquake design and analysis will not take into account the expected hazard results for the location, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

**Provision: 4.1.8.4.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the classification of site conditions will not be based on a property that reflects the effect of shaking ground on the structure, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the classification of site conditions will not be based on a property that reflects the effect of shaking ground on the structure, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.8.4.(3)**

---

#### **Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.8.4.(2) and allow the use of an alternate soil property for the determination of site class.

### **Provision: 4.1.8.4.(4)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the calculation of effects due to earthquake will not take into account the properties of the site response, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To clarify how intermediate values of the acceleration- and velocity-based site coefficients,  $F_a$  and  $F_v$ , are to be determined.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the calculation of effects due to earthquake will not take into account the properties of the site response, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To clarify how intermediate values of the acceleration- and velocity-based site coefficients,  $F_a$  and  $F_v$ , are to be determined.

### **Provision: 4.1.8.4.(5)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the calculation of effects due to earthquake will not take into account the properties of the site response for soil profiles for which site amplification is problematic, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the calculation of effects due to earthquake will not take into account the properties of the site response for soil profiles for which site amplification is problematic, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

**Provision: 4.1.8.4.(6)**

---

**Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.8.4.(5) and allow the classification of short-period structures on liquefiable soils as Site Classes other than F to account for the attenuation of short-period ground motions by liquefaction.

---

**Provision: 4.1.8.4.(7)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the earthquake design and analysis will not take into account how site amplifications affect the response of buildings subjected to ground motions, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To clarify how intermediate values of the design spectral response acceleration,  $S(T)$ , are to be determined.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the earthquake design and analysis will not take into account how site amplifications affect the response of buildings subjected to ground motions, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

*Intent 2.* To clarify how intermediate values of the design spectral response acceleration,  $S(T)$ , are to be determined.

### **Provision: 4.1.8.5.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the calculation of earthquake loads used for the design will not take into account the level of reliability appropriate for the use and occupancy, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.3] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the calculation of earthquake loads used for the design will not take into account the level of reliability appropriate for the use and occupancy, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

### **Provision: 4.1.8.6.(1)**

---

#### **Intent(s)**

*Intent 1.* To define the irregular structures to be used to trigger applicable restrictions and special requirements.

### **Provision: 4.1.8.6.(2)**

---

#### **Intent(s)**

*Intent 1.* To clarify that structures not classified as irregular are to be considered as regular structures.

### **Provision: 4.1.8.6.(3)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the structural design of buildings for earthquake will not take into account the effects that irregularities have on the structural system, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to Article 4.1.8.10., which contains additional system restrictions.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the structural design of buildings for earthquake will not take into account the effects that irregularities have on the structural system, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To direct Code users to Article 4.1.8.10., which contains additional system restrictions.

---

**Provision: 4.1.8.7.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the Equivalent Static Force Procedure will be used to design structures in situations where it will not provide a good approximation of the true dynamic response, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the Equivalent Static Force Procedure will be used to design structures in situations where it will not provide a good approximation of the true dynamic response, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.8.8.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the method of applying the earthquake forces on a building structure will not take into account how the maximum expected seismic building motions in different directions affect the seismic forces in the building structure, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the method of applying the earthquake forces on a building structure will not take into account how the maximum expected seismic building motions in different directions affect the seismic forces in the building structure, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

## **Intent Statements: NBC 2010**

**Intent 1.** To limit the probability that the calculation of loads due to earthquake will not take into account the properties of the structural system [i.e. lack of ductility, energy absorption and overstrength], which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

**Intent 2.** To limit the probability that the lateral-force-resisting system chosen for the design will not have a minimum ductility, integrity, and overstrength to absorb local failure due to maximum expected seismic ground motions, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.9.(2)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

**Intent 1.** To limit the probability that the overstrength-related force modification factor used will not be appropriate for the ductility-related force modification factor, which will not reflect the correct product of  $R_d R_o$ , as the property of the Seismic Force Resisting System, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

**Intent 1.** To limit the probability that the overstrength related force modification factor used will not be appropriate for the ductility related force modification factor, which will not reflect that the product  $R_d R_o$  is a property of the Seismic Force Resisting System, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that the earthquake design will not reflect that the response of the Seismic Force Resisting System should be governed by its most vulnerable part, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the earthquake design will not reflect that the response of the Seismic Force Resisting System should be governed by its most vulnerable part, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

## **Provision: 4.1.8.9.(4)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability of one Seismic Force Resisting System being supported by another Seismic Force Resisting System with a higher combined reduction factor, which could lead to a lower base shear, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to Sentence 4.1.8.15.(5), which addresses design forces.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability of one Seismic Force Resisting System being supported by another Seismic Force Resisting System with a higher combined reduction factor, which could lead to a lower base shear, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To direct Code users to Sentence 4.1.8.15.(5), which addresses design forces.

---

## **Provision: 4.1.8.9.(5)**

---

**Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.8.9.(1) and allow the use of alternate values of  $R_d R_o$  equivalent to those for a listed Seismic Force Resisting System, where it can be demonstrated through testing, research and analysis that the performance of a structural system is at least equivalent to that of the listed Seismic Force Resisting System.

**Provision: 4.1.8.10.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that structures with a Discontinuity in Capacity - Weak Storey (irregularity Type 6 in Table 4.1.8.6.), which are particularly vulnerable to damage and collapse during seismic ground motions, will be built in areas other than low seismicity regions, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that, when built in low seismicity regions, such structural systems will not remain elastic when subjected to the design ground motion, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that structures with a Discontinuity in Capacity - Weak Storey (irregularity Type 6 in Table 4.1.8.6.), which are particularly vulnerable to damage and collapse during seismic ground motions, will be built in areas other than low seismicity regions, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To limit the probability that, when built in low seismicity regions, such structural systems will not remain elastic when subjected to the design ground motion, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that a system with a structural irregularity characterized by geometric or stiffness discontinuities or torsional sensitivity will be used in post-disaster buildings in regions of moderate to high seismicity, which could lead to localized concentrations of inelastic deformation, which could lead to the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

### **Objective**

OP2

### **Attributions**

4.1.8.10.(2)(b) [F20-OP2.3] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that post-disaster structures with a Discontinuity in Capacity - Weak Storey (irregularity Type 6 in Table 4.1.8.6.), which are particularly vulnerable to damage and collapse during seismic ground motions, will be built, which could lead to the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

### **Objective**

OP2

### **Attributions**

4.1.8.10.(2)(c) [F20-OP2.3] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that post-disaster structures will not have a minimal level of ductility, which could lead to an inability to dissipate energy through inelastic deformation (which provides some protection against ground motions that exceed the design level), which could lead to the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

### **Objective**

OP2

### **Attributions**

4.1.8.10.(2)(d) [F20-OP2.3] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that a system with a structural irregularity characterized by lesser stiffness in the lower storeys of the building will be used in post-disaster buildings, which could lead to localized concentrations of inelastic deformation, which could lead to the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

**Provision: 4.1.8.10.(3)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that walls forming part of the Seismic Force Resisting System will not be continuous from their top to the foundation and will not contain an in-plane or out-of-plane discontinuity (irregularity Types 4 and 5 in Table 4.1.8.6.) in areas where strong ground motions affect structures of moderate to long periods in particular, which could lead to the Seismic Force Resisting System being unable to function effectively during strong earthquake motions, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that walls forming part of the Seismic Force Resisting System will not be continuous from their top to the foundation and will not contain an in-plane or out-of-plane discontinuity (irregularity Types 4 and 5 in Table 4.1.8.6.) in areas where strong ground motions affect structures of moderate to long periods in particular, which could lead to the Seismic Force Resisting System being unable to function effectively during strong earthquake motions, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

**Provision: 4.1.8.11.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Article 4.1.8.11.

**Provision: 4.1.8.11.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the design base shear for the structural analysis of the building according to the equivalent static force procedure will not take into account all the factors that affect the expected magnitude and distribution of seismic forces and displacements in the building structure, which could lead to structural failure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

*Intent 2.* To limit the probability that the design base shear will include values for periods greater than 2.0 s where there is considerable uncertainty associated with those values at such long periods, which could lead to structural failure, which could lead to harm to persons.

*Intent 3.* [Clause 4.1.8.11.(2)(c)] To supersede the application of Sentence 4.1.8.11.(2) and limit the design base shear at short periods in all but the most brittle structural systems and in buildings on soils for which the determination of site amplification is problematic, on the basis that experience during earthquakes has demonstrated that damage to well designed short-period structures with even limited ductility is very unusual.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the design base shear for the structural analysis of the building according to the equivalent static force procedure will not take into account all the factors that affect the expected magnitude and distribution of seismic forces and displacements in the building structure, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To limit the probability that the design base shear will include values for periods greater than 2.0 s where there is considerable uncertainty associated with those values at such long periods, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 3.* [Clause 4.1.8.11.(2)(c)] To supersede the application of Sentence 4.1.8.11.(2) and limit the design base shear at short periods in all but the most brittle structural systems and in buildings on soils for which the determination of site amplification is problematic, on the basis that experience during earthquakes has demonstrated that damage to well designed short-period structures with even limited ductility is very unusual.

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the acceleration time-histories used in the numerical time-history method will not be spectrum-compatible and will not take into account how site amplifications affect the response of buildings subjected to ground motions, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To direct Code users to Sentence 4.1.8.4.(7) for the determination of the design spectral response acceleration values,  $S(T)$ , and their intermediate values.

---

### **Provision: 4.1.8.12.(4)**

#### **Objective**

OS2

#### **Attributions**

4.1.8.12.(4)(a) [F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the dynamic analysis will not take into account the effects of accidental eccentricities, including dynamic amplification of the static effect of accidental eccentricities, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to Sentence 4.1.8.11.(6) for the calculation of the lateral force at each level of the building.

---

**Objective**

OP2

**Attributions**

4.1.8.12.(4)(a) [F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the dynamic analysis will not take into account the effects of accidental eccentricities, including dynamic amplification of the static effect of accidental eccentricities, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To direct Code users to Sentence 4.1.8.11.(6) for the calculation of the lateral force at each level of the building.

---

**Attributions**

4.1.8.12.(4)(b)

**Intent(s)**

*Intent 1.* To supersede the application of Clause (a) and allow the use of a smaller accidental eccentricity that does not include a dynamic amplification of the static effect of accidental eccentricity for torsionally stiff structures.

---

**Provision: 4.1.8.12.(5)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that unacceptable design methodologies will be implemented for the determination of the design elastic base shear for earthquake design, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1, OP2.3] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that unacceptable design methodologies will be implemented for the determination of the design elastic base shear for earthquake design, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.8.12.(6)**

---

#### **Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.8.12.(5) and limit the design elastic base shear at short periods in all but the most brittle structural systems, on the basis that experience during earthquakes has demonstrated that damage to well designed short-period structures with even limited ductility is very unusual.

### **Provision: 4.1.8.12.(7)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the design elastic base shear used for the design of buildings for earthquake, as obtained from a Linear Dynamic Analysis, will not take into account:

- the inelastic response of the structure, or
- the level of reliability appropriate for the use and occupancy.

This is to limit the probability of structural failure, which could lead to harm to persons.

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.3] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the design elastic base shear used for the design of buildings for earthquake, as obtained from a Linear Dynamic Analysis, will not take into account:

- the inelastic response of the structure, or
- the level of reliability appropriate for the use and occupancy.

This is to limit the probability of:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

### **Provision: 4.1.8.12.(8)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the base shear used for the design of the structure will be based on a value obtained from a model that is more flexible than an actual structure would be, which could

lead to a base shear value that is lower than it should be, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the base shear used for the design of the structure will be based on a value obtained from a model that is more flexible than an actual structure would be, which could lead to a base shear value that is lower than it should be, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

**Provision: 4.1.8.12.(9)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the base shear used for the design of structures requiring dynamic analysis due to their irregularity will be based on a value that does not fully capture the influence of irregularities on the structures' behaviour during an earthquake, which could lead to a base shear value that is lower than it should be, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the base shear used for the design of structures requiring dynamic analysis due to their irregularity will be based on a value that does not fully capture the influence of irregularities on the structures' behaviour during an earthquake, which could lead to a base shear value that is lower than it should be, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.8.12.(10)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the elastic storey shears, storey forces, member forces and deflections resulting from a Linear Dynamic Analysis will be proportioned in accordance with the design base shear, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the elastic storey shears, storey forces, member forces and deflections resulting from a Linear Dynamic Analysis will not be augmented by the effect of accidental torsion, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the elastic storey shears, storey forces, member forces and deflections resulting from a Linear Dynamic Analysis will be proportioned in accordance with the design base shear, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To limit the probability that the elastic storey shears, storey forces, member forces and deflections resulting from a Linear Dynamic Analysis will not be augmented by the effect of accidental torsion, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.12.(11)**

---

#### **Intent(s)**

*Intent 1.* To supersede the application of Sentence 4.1.8.12.(10) and allow the use of the period determined in Subclauses 4.1.8.11.(3)(d)(i), 4.1.8.11.(3)(d)(ii) and 4.1.8.11.(3)(d)(iii) but without the upper limit specified therein so that the model used to calculate the deflections is the same as that used to compute the period.

**Provision: 4.1.8.13.(1)**

---

**Objective**

OS2

**Attributions**

[F22-OS2.3, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of the Seismic Force Resisting System of the building will not take into account the expected lateral deflection and distortion of the building structure due to maximum expected seismic ground motions, which could lead to damage to or displacement of attached or adjacent building elements, which could consequently fall or slide, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F22-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of the Seismic Force Resisting System of the building will not take into account the expected lateral deflection and distortion of the building structure due to maximum expected seismic ground motions, which could lead to the excessive deformation of the building structure, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

**Provision: 4.1.8.13.(2)**

---

**Objective**

OS2

**Attributions**

[F22-OS2.3, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the calculation of lateral deflection will not take into account the combined effects of expected lateral deflection and twist of the building structure, including inelastic deformation, due to maximum expected seismic ground motions, which could lead to damage to or displacement of attached or adjacent building elements, which could consequently fall or slide, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F22-OP2.3, OP2.4]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that the calculation of lateral deflection will not take into account the combined effects of expected lateral deflection and twist of the building structure, including inelastic deformation, due to maximum expected seismic ground motions, which could lead to the excessive deformation of the building structure, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.13.(3)**

#### **Objective**

OS2

#### **Attributions**

[F22-OS2.3, OS2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the lateral deflection and distortion of the building structure due to maximum expected seismic ground motions will lead to damage to or displacement of attached or adjacent building elements, which could consequently fall or slide, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F22-OP2.3, OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the lateral deflection and distortion of the building structure due to maximum expected seismic ground motions will lead to the excessive deformation of the building structure, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.13.(4)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Sentence 4.1.8.13.(2) for deflection calculations to account for sway effects due to seismic loading as required by Sentence 4.1.3.2.(12).

---

### **Provision: 4.1.8.14.(1)**

#### **Objective**

OS2

#### **Attributions**

[F22-OS2.3, OS2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the lateral deflections of adjacent structures due to maximum expected seismic ground motions will lead to the impact of adjacent structures, which could lead to:

- structural failure, or

- severe damage to non-structural elements, which could lead to their subsequently falling.

This is to limit the probability of harm to persons.

---

**Objective**

OP2

**Attributions**

[F22-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the lateral deflections of adjacent structures due to maximum expected seismic ground motions will lead to the impact of adjacent structures, which could lead to:

- A damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

**Objective**

OP4

**Attributions**

[F22-OP4.3]

**Intent(s)**

*Intent 1.* To limit the probability that the lateral deflections of adjacent structures due to maximum expected seismic ground motions will lead to the impact of adjacent structures, which could lead to damage to adjacent buildings.

---

**Provision: 4.1.8.14.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1, OS2.3, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of the connection between adjacent structures will not take into account the factors affecting the performance of the connection during earthquake, which could lead to structural failure of the connection, which could lead to the impact of adjacent structures, which could lead to:

- structural failure, or
- severe damage to non-structural elements, which could lead to their consequently falling.

This is to limit the probability of harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1, OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of the connection between adjacent structures will not take into account the factors affecting the performance of the connection during earthquake, which could

---

## **Intent Statements: NBC 2010**

lead to the structural failure of the connection, which could lead to the impact of adjacent structures, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

### **Objective**

OP4

### **Attributions**

[F20-OP4.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the design of the connection between adjacent structures will not take into account the factors affecting the performance of the connection during earthquake, which could lead to structural failure of the connection, which could lead to the impact of adjacent structures, which could lead to damage to adjacent buildings.

---

## **Provision: 4.1.8.14.(3)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1, OS2.3, OS2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the design of the connection between buildings will not take into account the behaviour of the connected buildings as a whole, which could lead to the structural failure of the connection, which could lead to the impact of adjacent structures, which could lead:

- structural failure, or
- severe damage to non-structural elements, which could lead to their subsequently falling.

This is to limit the probability of harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1, OP2.3, OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the design of the connection between buildings will not take into account the behaviour of the connected buildings as a whole, which could lead to the structural failure of the connection, which could lead to the impact of adjacent structures, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

### **Objective**

OP4

### **Attributions**

[F20-OP4.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the design of the connection between buildings will not take into account the behaviour of the connected buildings as a whole, which could lead to the structural failure of the connection, which could lead to the impact of adjacent structures, which could lead to damage to adjacent buildings.

---

**Provision: 4.1.8.14.(4)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1, OS2.3, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of the building and the connection between adjacent structures will not take into account the interaction of adjacent structural systems during earthquake, which could lead to structural failure of the connection, which could lead to the impact of adjacent structures, which could lead to:

- structural failure, or
- severe damage to non-structural elements, which could lead to their subsequently falling.

This is to limit the probability of harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1, OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of the building and the connection between adjacent structures will not take into account the interaction of adjacent structural systems during earthquake, which could lead to the structural failure of the connection, which could lead to the impact of adjacent structures, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

**Objective**

OP4

**Attributions**

[F20-OP4.3]

**Intent(s)**

*Intent 1.* To limit the probability that the design of the building and the connection between adjacent structures will not take into account the interaction of adjacent structural systems during earthquake, which could lead to the structural failure of the connection, which could lead to the impact of adjacent structures, which could lead to damage to adjacent buildings.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.8.15.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the design of a floor or roof acting as a diaphragm will not take into account the maximum expected seismic forces tributary to that storey which will be transferred through the diaphragm into the Seismic Force Resisting System, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the openings in the diaphragm or the shape of the diaphragm will not be taken into account in its design for earthquake, which could lead to stress concentrations, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.3, OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the design of a floor or roof acting as a diaphragm will not take into account the maximum expected seismic forces tributary to that storey which will be transferred through the diaphragm into the Seismic Force Resisting System, which could lead to:

- the excessive deformation of, or excessive stress in, the diaphragm, which could lead to damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To limit the probability that the openings in the diaphragm or the shape of the diaphragm will not be taken into account in its design for earthquake, which could lead to stress concentrations, which could lead to:

- the excessive deformation of, or excessive stress in, the diaphragm, which could lead to damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

### **Provision: 4.1.8.15.(2)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the design of the diaphragm will not take into account the maximum expected seismic forces tributary to that storey which will be transferred through the diaphragm into the Seismic Force Resisting System, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1, OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of the diaphragm will not take into account the maximum expected seismic forces tributary to that storey which will be transferred through the diaphragm into the Seismic Force Resisting System, which could lead to:

- the excessive deformation of, or excessive stress in, the diaphragm, which could lead to damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

**Provision: 4.1.8.15.(3)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the diaphragm connections will not take into account the capacity forces of the diaphragm, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1, OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the diaphragm connections will not take into account the capacity forces of the diaphragm, which could lead to:

- the excessive deformation of, or excessive stress in, the diaphragm, which could lead to damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

**Provision: 4.1.8.15.(4)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the design of elements supporting a discontinuous column, wall or braced frame will not be based on the capacity of the discontinuous element, which could lead to yielding in the discontinuity, which could lead to a sudden brittle failure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1, OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the design of elements supporting a discontinuous column, wall or braced frame will not be based on the capacity of the discontinuous element, which could lead to yielding in the discontinuity, which could lead to a sudden brittle failure, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.15.(5)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1, OS2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the lower system will be designed for lower forces than the upper system, which could lead to a weaker lower level, which could lead to yielding in the less ductile lower level, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to Sentence 4.1.8.9.(4), which addresses the values of  $R_dR_o$ .

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1, OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the lower system will be designed for lower forces than the upper system, which could lead to a weaker lower level, which could lead to yielding in the less ductile lower level, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To direct Code users to Sentence 4.1.8.9.(4), which addresses the values of  $R_dR_o$ .

---

### **Provision: 4.1.8.15.(6)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that, where elements of the Seismic Force Resisting System are subject to forces from two loading directions, the potential for simultaneous yielding will not be taken into account, which could lead to structural failure, which could which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that, where elements of the Seismic Force Resisting System are subject to forces from two loading directions, the potential for simultaneous yielding will not be taken into account, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.15.(7)**

---

### **Intent(s)**

*Intent 1.* To supersede the requirements of Article 4.1.8.11., which applies to the Equivalent Static Force Procedure, and of Article 4.1.8.12., which applies to the Dynamic Analysis Procedure, and provide upper limits on the application of the principles of capacity design, such that the design forces need not exceed those corresponding to elastic response.

---

### **Provision: 4.1.8.15.(8)**

---

### **Intent(s)**

*Intent 1.* To supersede the requirements of Article 4.1.8.11., which applies to the Equivalent Static Force Procedure, and of Article 4.1.8.12., which applies to the Dynamic Analysis Procedure, and limit the design forces for the elements of the Seismic Force Resisting System to the maximum values corresponding to the force for which the rocking foundation is designed.

---

### **Provision: 4.1.8.16.(1)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1] Applies to portion of Code text: “*Foundations* shall be designed to resist the lateral load capacity of the SFRS...”

### **Intent(s)**

*Intent 1.* To limit the probability that the capacity of the foundation to resist the maximum expected seismic forces will be less than the capacity of the superstructure, which could lead to a sudden brittle failure of the foundation, which could lead to the collapse of the building, which could lead to harm to persons.

---

### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To modify the application of Sentence 4.1.8.16.(1) and allow the foundation design to be consistent with a ductility-based force reduction factor of 2 where the foundation is allowed to rock, which has been shown to produce lateral displacements comparable with a fixed base elastic case.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] Applies to portion of Code text: “*Foundations* shall be designed to resist the lateral load capacity of the SFRS...”

### **Intent(s)**

*Intent 1.* To limit the probability that the capacity of the foundation to resist the maximum expected seismic forces will be less than the capacity of the superstructure, which could lead to a sudden brittle failure of the foundation, which could lead to damage to the building.

---

## **Provision: 4.1.8.16.(2)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.2, OS2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the capacity of the soil and rock on which the foundation rests will be exceeded during the seismic design ground motion, which could lead to the excessive displacement of the building, which could lead to:

- structural failure, or
- severe damage to non-structural elements, which could lead to their subsequently falling.

This is to limit the probability of harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.2, OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the capacity of the soil and rock on which the foundation rests will be exceeded during the seismic design ground motion, which could lead to the excessive displacement of the building, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

## **Provision: 4.1.8.16.(3)**

---

### **Objective**

OS2

### **Attributions**

4.1.8.16.(3)(a) [F22-OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that pile footings, drilled piers and caissons will spread apart due to the maximum expected seismic forces, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

4.1.8.16.(3)(a) [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that pile footings, drilled piers and caissons will spread apart due to the maximum expected seismic forces, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

**Objective**

OS2

**Attributions**

4.1.8.16.(3)(b) [F22-OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the piles, drilled piers and caissons will slide relative to the pile cap or structure, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

4.1.8.16.(3)(b) [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the piles, drilled piers and caissons will slide relative to the pile cap or structure, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

**Objective**

OS2

**Attributions**

4.1.8.16.(3)(c) [F20-OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the structural design of the ties between deep foundation members will not take into account the maximum expected seismic forces, with respect to preventing the foundation from spreading, which could lead to structural failure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP2

### **Attributions**

4.1.8.16.(3)(c) [F20-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the structural design of the ties between deep foundation members will not take into account the maximum expected seismic forces, with respect to preventing the foundation from spreading, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.16.(4)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the structural design of basement walls will not take into account the maximum expected seismic lateral pressure from backfill or natural ground, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1, OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the structural design of basement walls will not take into account the maximum expected seismic lateral pressure from backfill or natural ground, which could lead to the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building.

---

### **Provision: 4.1.8.16.(5)**

---

### **Objective**

OS2

### **Attributions**

4.1.8.16.(5)(a) [F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the deep foundation elements will not be able to accommodate cyclic inelastic behaviour, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

4.1.8.16.(5)(a) [F20-OP2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the deep foundation elements will not be able to accommodate cyclic inelastic behaviour, which could lead to damage to the building.

---

**Objective**

OS2

**Attributions**

4.1.8.16.(5)(b) [F22-OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the spread footings will spread apart due to the maximum expected seismic forces, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

4.1.8.16.(5)(b) [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the spread footings will spread apart due to the maximum expected seismic forces, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

**Provision: 4.1.8.16.(6)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the structural design of ties between foundation members will not take into account the maximum expected seismic forces, with respect to preventing the foundation from spreading, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.4]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that the structural design of ties between deep foundation members will not take into account the maximum expected seismic forces, with respect to preventing the foundation from spreading, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.16.(7)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.2] [F22-OS2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that liquefaction and its consequences (e.g. ground displacement, loss of soil strength and stiffness) will not be taken into account in the design of a structure and its foundations, which could lead to the excessive displacement of the building, which could lead to:

- structural failure, or
- severe damage to non-structural elements, which could lead to their subsequently falling.

This is to limit the probability of harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.2] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that liquefaction and its consequences (e.g. ground displacement, loss of soil strength and stiffness) will not be taken into account in the design of a structure and its foundations, which could lead to the excessive displacement of the building, which could lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.17.(1)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the earthquake design and analysis will not take into account slope stability and its consequences on the building, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the earthquake design and analysis will not take into account slope stability and its consequences on the building, which could lead to:

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

**Provision: 4.1.8.18.(1)**

---

**Objective**

OS2

**Attributions**

[F20, F22-OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the expected seismic distortion of the building structure will damage or displace architectural, mechanical or electrical components, which could lead to elements of the building falling or sliding, which could lead to harm to persons.

*Intent 2.* To limit the probability that the lateral seismic force used for the design of anchorage for architectural, mechanical or electrical components, will not take into account all the factors that affect the expected magnitude of the inertial seismic force, which could lead to elements of the building falling or sliding, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.3] [F22-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the expected seismic distortion of the building structure will damage or displace architectural, mechanical or electrical components, which could lead to:

- elements of the building falling or sliding, which could lead to damage to the building, or
- the functional failure of architectural, mechanical or electrical systems or part thereof, which could impede the intended use and occupancy of the building.

*Intent 2.* To limit the probability that the lateral seismic force used for the design of anchorage for architectural, mechanical or electrical components, will not take into account all the factors that affect the expected magnitude of the inertial seismic force, which could lead to:

- failure of the anchorage, which could lead to damage to the component and, if it falls, damage to the building, or
- damage to attached architectural, mechanical or electrical systems, which could lead to their functional failure, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 4.1.8.18.(2)**

---

#### **Intent(s)**

*Intent 1.* To exempt from the requirements of Sentence 4.1.8.18.(1) non-structural components that present a low risk to life safety in regions of low to moderate seismicity.

---

### **Provision: 4.1.8.18.(3)**

---

#### **Objective**

OS2

#### **Attributions**

[F20, F22-OS2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the lateral seismic force used in the design of anchorage for an element or component will not take into account the risk associated with the failure of the element or component, which could lead to failure of the anchorage, which could lead to elements of the building falling or sliding, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20, F22-OP2.3, OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the lateral seismic force used in the design of anchorage for an element or component will not take into account the risk associated with the failure of the element or component, which could lead to failure of the anchorage, which could lead to:

- components of the building falling or sliding, which could lead to damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.18.(4)**

---

#### **Intent(s)**

*Intent 1.* To define components that are:

- both rigid and rigidly connected, or
- both flexible and flexibly connected.

---

### **Provision: 4.1.8.18.(5)**

---

#### **Objective**

OS2

#### **Attributions**

[F20, F22-OS2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the lateral force,  $V_p$ , used in the design of access floors and their connections will not include:

- both the weight of the access floor and the permanent equipment attached to it, and
- a load allowance for permanent equipment that allows for future modifications to the equipment installation.

This is to limit the probability that components of the building will fall or slide, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20, F22-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the lateral force,  $V_p$ , used in the design of access floors and their connections will not include:

- both the weight of the access floor and the permanent equipment attached to it, and
- a load allowance for permanent equipment that allows for future modifications to the equipment installation.

This is to limit the probability of:

- components of the building falling or sliding, which could lead to damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

---

**Provision: 4.1.8.18.(6)**

---

**Objective**

OS2

**Attributions**

[F20, F22-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the inertial seismic force applied by a tank containing liquid or by a flexible or flexibly connected piece of machinery, fixture or equipment to the building structure will not be taken into account in the structural design, which could lead to structural failure due to the dynamic response of the tank or piece of machinery, fixture or equipment when it is subjected to the maximum expected seismic building motions, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20, F22-OP2.1, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the inertial seismic force applied by a tank containing liquid or by a flexible or flexibly connected piece of machinery, fixture or equipment to the building structure will not be taken into account in the structural design, which could lead to structural failure due to the dynamic response of the tank or piece of machinery, fixture or equipment when it is subjected to the maximum expected seismic building motions, which could lead to:

---

## **Intent Statements: NBC 2010**

- the excessive deformation of, or excessive stress in, the structural elements, which could lead to damage to the building, or
- the excessive deformation of, or excessive stress in, the building structure, which could lead to damage to the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.18.(7)**

#### **Objective**

OS2

#### **Attributions**

[F20, F22-OS2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the design lateral force,  $V_p$ , for elements and components and their connections will not be applied in the direction that is the most critical for design, which could lead to structural failure, which could lead to components of the building falling or sliding, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20, F22-OP2.3, OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the design lateral force,  $V_p$ , for elements and components and their connections will not be applied in the direction that is the most critical for design:

- which could lead to failure of the connection, which could lead to components of the building falling or sliding, which could lead to damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.1.8.18.(8)**

#### **Objective**

OS2

#### **Attributions**

[F20, F22-OS2.4] Applies to portion of Code text: "Connections to the structure of elements and components listed in Table 4.1.8.18. shall be designed to support the component or element for gravity loads, shall conform to the requirements of Sentence 4.1.8.18.(1) ..."

#### **Intent(s)**

*Intent 1.* To limit the probability that the connections will not be designed to transfer the attachment forces,  $V_p$ , and the gravity loads arising from the components they support, which could lead to failure of the connection, which could lead to components of the building falling or sliding, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20, F22-OP2.3, OP2.4] Applies to portion of Code text: "Connections to the structure of elements and components listed in Table 4.1.8.18. shall be designed to support the component or element for gravity loads, shall conform to the requirements of Sentence 4.1.8.18.(1)..."

**Intent(s)**

*Intent 1.* To limit the probability that the connections will not be designed to transfer the attachment forces,  $V_p$ , and the gravity loads arising from the components they support, which could lead to failure of the connection, which could lead to:

- components of the building falling or sliding, which could lead to damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

---

**Objective**

OS2

**Attributions**

4.1.8.18.(8)(a) [F20, F22-OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that friction due to gravity loads will be considered to provide resistance to seismic forces, which could lead to rocking and twisting of the component about its vertical axis, which could lead to components of the building falling or sliding, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

4.1.8.18.(8)(a) [F20, F22-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that friction due to gravity loads will be considered to provide resistance to seismic forces, which could lead to rocking and twisting of the component about its vertical axis, which could lead to:

- components of the building falling or sliding, which could lead to damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

---

**Objective**

OS2

**Attributions**

4.1.8.18.(8)(b), 4.1.8.18.(8)(c) [F20, F22-OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the component response modification factor will not reflect the limited ductility of such connections, which could lead to failure of the connections, which could lead to components of the building falling or sliding, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP2

### **Attributions**

4.1.8.18.(8)(b), 4.1.8.18.(8)(c) [F20, F22-OP2.3, OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the component response modification factor will not reflect the limited ductility of such connections, which could lead to failure of the connections, which could lead to:

- components of the building falling or sliding, which could lead to damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

---

### **Objective**

OS2

### **Attributions**

4.1.8.18.(8)(d) [F20, F22-OS2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that connections will not be able to withstand the cyclic tensile loading imposed by seismic response, which could lead to failure of the connections, which could lead to components of the building falling or sliding, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

4.1.8.18.(8)(d) [F20, F22-OP2.3, OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that connections will not be able to withstand the cyclic tensile loading imposed by seismic response, which could lead to failure of the connections, which could lead to:

- components of the building falling or sliding, which could lead to damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

---

### **Objective**

OS2

### **Attributions**

4.1.8.18.(8)(e) [F20, F22-OS2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the connection design force will not reflect the significant risk to life safety associated with such components becoming dislodged or falling off the side of a building, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

4.1.8.18.(8)(e) [F20, F22-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the connection design force will not reflect the significant risk to life safety associated with such components becoming dislodged or falling off the side of a building, which could lead to:

- components of the building falling or sliding, which could lead to damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

---

**Attributions**

4.1.8.18.(8)(f)

**Intent(s)**

*Intent 1.* To clarify the definition of “ductile connection” referred to in Clause 4.1.8.18.(8)(e).

---

**Provision: 4.1.8.18.(9)**

**Intent(s)**

*Intent 1.* To direct Code users to Article 4.1.8.15. for the determination of seismic forces for diaphragms.

---

**Provision: 4.1.8.18.(10)**

**Objective**

OS2

**Attributions**

[F22-OS2.3, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the calculation of the deflection of elements or components will not take into account the expected lateral deflection and twist of the building structure, including inelastic deformation, due to the maximum expected seismic ground motions, which could lead to damage to or displacement of attached or adjacent components of the building, which could consequently fall or slide, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F22-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the calculation of the deflection of elements or components will not take into account the expected lateral deflection and twist of the building structure, including inelastic deformation, due to the maximum expected seismic ground motions, which could lead to damage to or displacement of attached or adjacent components of the building, which could lead to:

- components of the building falling or sliding, which could lead to damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.1.8.18.(11)**

---

#### **Objective**

OS2

#### **Attributions**

[F22-OS2.1, OS2.3, OS2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the interaction of non-structural and structural components of the building due to the maximum expected seismic deformations of the structure will lead to:

- structural failure, or
- severe damage to non-structural elements, which could lead to their subsequently falling.

This is to limit the probability of harm to persons.

*Intent 2.* To direct Code users to Sentence 4.1.8.3.(6) for requirements related to stiff elements not considered part of the Seismic Force Resisting System.

---

#### **Objective**

OP2

#### **Attributions**

[F22-OP2.1, OP2.3, OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the interaction of non-structural and structural components of the building due to the maximum expected seismic deformations of the structure will lead to:

- damage to the building, or
- damage to the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To direct Code users to Sentence 4.1.8.3.(6) for requirements related to stiff elements not considered part of the Seismic Force Resisting System.

### **Provision: 4.1.8.18.(12)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1] [F22-OS2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that seismic restraint for suspended equipment will not be able to resist the specified earthquake loads, which could lead to:

- structural failure, or
- severe damage to non-structural elements, which could lead to their subsequently falling.

This is to limit the probability of harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20, F22-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that seismic restraint for suspended equipment will not be able to resist the specified earthquake loads and displacement requirements, which could lead to damage to or displacement of attached or adjacent components of the building, which could lead to severe damage to and falling of non-structural components, which could lead to:

- damage to the building, or
- damage to and functional failure of a component's system, which could impede the intended use and occupancy of the building.

**Provision: 4.1.8.18.(13)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1] [F22-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability that the chains or cables that support isolated suspended equipment that is designed as a pendulum system will not be able to resist the specified earthquake loads, which could lead to the structural failure of the chains or cables, which could lead to severe damage to or falling of suspended equipment or non-structural elements, which could lead to harm to persons.

*Intent 2.* To direct Code users to the deflection requirements of Sentence 4.1.8.18.(11).

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.3]

**Intent(s)**

*Intent 1.* To limit the probability that the chains or cables that support isolated suspended equipment that is designed as a pendulum system will not be able to resist the specified earthquake loads, which could lead to the structural failure of the chains and cables, which could lead to severe damage to or falling of suspended equipment or non-structural elements, which could lead to:

- damage to the building, or
- damage to and functional failure of a building component's system, which could impede the intended use and occupancy of the building.

*Intent 2.* To direct Code users to the deflection requirements of Sentence 4.1.8.18.(11).

**Provision: 4.2.1.1.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Section 4.2.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.2.2.1.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.2, OS2.6] [F21-OS2.6]

#### **Intent(s)**

*Intent 1.* To limit the probability that the ground conditions below any proposed building will not be taken into account in the design and construction of the excavation and foundation system, which could lead to structural failure, including the collapse of the excavation, which could lead to harm to persons.

*Intent 2.* To facilitate, through qualification of persons involved with the investigation, the determination of compliance with this requirement.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.2] [F21-OP2.6]

#### **Intent(s)**

*Intent 1.* To limit the probability that the ground conditions below any proposed building will not be taken into account in the design and construction of the excavation and foundation system, which could lead to excessive movements of the ground, which could lead to damage to the building.

*Intent 2.* To facilitate, through qualification of persons involved with the investigation, the determination of compliance with this requirement.

---

#### **Objective**

OP4

#### **Attributions**

[F21-OP4.1, OP4.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the ground conditions below any proposed building will not be taken into account in the design and construction of the excavation and foundation system, which could lead to excessive displacement of the ground or collapse of the excavation, which could lead to damage to adjacent buildings.

*Intent 2.* To facilitate, through qualification of persons involved with the investigation, the determination of compliance with this requirement.

### **Provision: 4.2.2.2.(1)**

---

#### **Intent(s)**

*Intent 1.* To direct Code users to Article 2.2.4.6. regarding information on foundation drawings.

**Provision: 4.2.2.3.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.2, OS2.6] [F21-OS2.6]

**Intent(s)**

*Intent 1.* To limit the probability that:

- the ground conditions will not be consistent with the design, and
- excavation, dewatering and construction will not be carried out in accordance with the design and good engineering practice.

This is to limit the probability of structural failure, including excavation collapse, which could lead to harm to persons.

*Intent 2.* To facilitate, through qualification of persons involved with the review, the determination of compliance with this requirement.

---

**Objective**

OP2

**Attributions**

[F20-OP2.2] [F21-OP2.5]

**Intent(s)**

*Intent 1.* To limit the probability that:

- the ground conditions will not be consistent with the design, and
- excavation, dewatering and construction will not be carried out in accordance with the design and good engineering practice.

This is to limit the probability of excessive ground movements, which could lead to damage to the building.

*Intent 2.* To facilitate, through qualification of persons involved with the review, the determination of compliance with this requirement.

---

**Objective**

OP4

**Attributions**

[F21-OP4.1, OP4.4]

**Intent(s)**

*Intent 1.* To limit the probability that:

- the ground conditions will not be consistent with the design, and
- excavation, dewatering and construction will not be carried out in accordance with the design and good engineering practice.

This is to limit the probability of excessive ground displacement, which could lead to damage to adjacent buildings.

*Intent 2.* To facilitate, through qualification of persons involved with the review, the determination of compliance with this requirement.

**Provision: 4.2.2.3.(2)**

---

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To facilitate the determination of compliance with the requirements of Sentence 4.2.2.3.(1).

---

### **Provision: 4.2.2.4.(1)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.2, OS2.6] [F21-OS2.6]

### **Intent(s)**

*Intent 1.* To limit the probability that the type or condition of soil, rock or groundwater below the building, as determined during the review, will not be taken into account in the design and construction of the excavation and foundation system, which could lead to structural failure, including the collapse of the excavation, which could lead to harm to persons.

*Intent 2.* To facilitate, through qualification of persons skilled in the interpretation of the types or conditions found for the design, the determination of compliance with this requirement.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.2] [F21-OP2.6]

### **Intent(s)**

*Intent 1.* To limit the probability that the type or condition of soil, rock or groundwater below the building, as determined during the review, will not be taken into account in the design and construction of the excavation and foundation system, which could lead to excessive movement of the ground, which could lead to damage to the building.

*Intent 2.* To facilitate, through qualification of persons skilled in the interpretation of the types or conditions found for the design, the determination of compliance with this requirement.

---

#### **Objective**

OP4

#### **Attributions**

[F21-OP4.1, OP4.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the type or condition of soil, rock or groundwater below the building, as determined during the review, will not be taken into account in the design and construction of the excavation and foundation system, which could lead to excessive displacement of the ground or collapse of the excavation, which could lead to damage to adjacent buildings.

*Intent 2.* To facilitate, through qualification of persons skilled in the interpretation of the types or conditions found for the design, the determination of compliance with this requirement.

[F21-OP4.1, OP4.4]

**Intent(s)**

*Intent 1.* To limit the probability that the changed properties of the soil, rock or groundwater below the building due to climatic or other conditions, will not be taken into account in the design and construction of the excavation and foundation system, which could lead to excessive displacement of the ground or collapse of the excavation, which could lead to damage to adjacent buildings.

*Intent 2.* To facilitate, through qualification of persons skilled in the interpretation of the properties found for the design, the determination of compliance with this requirement.

**Provision: 4.2.3.1.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to the requirements of Subsection 4.3.1. concerning the detailed design of wood components and their protection against deterioration due to termite attack.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.2.3.2.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F80-OS2.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that wood components exposed to damp environmental conditions will not be protected against fungal decay during the design life of the building, which could lead to their premature deterioration, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F80-OP2.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that wood components exposed to damp environmental conditions will not be protected against fungal decay during the design life of the building, which could lead to their premature deterioration, which could lead to excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

### **Provision: 4.2.3.2.(2)**

---

#### **Objective**

OS2

#### **Attributions**

[F82-OS2.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that wood components protected against fungal decay will not be cared for during the design life of the building, which could lead to their premature deterioration, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F82-OP2.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that wood components protected against fungal decay will not be cared for during the design life of the building, which could lead to their premature deterioration, which could lead to excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building.

### **Provision: 4.2.3.3.(1)**

---

#### **Intent(s)**

*Intent 1.* To direct Code users to the requirements of Subsection 4.3.2. regarding the detailed design of masonry components and systems.

**Provision: 4.2.3.4.(1)**

---

**Objective**

OS2

**Attributions**

[F80-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability that plain or reinforced masonry exposed to environmental conditions conducive to deterioration will not be protected during the design life of the building, which could lead to premature deterioration, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F80-OP2.3]

**Intent(s)**

*Intent 1.* To limit the probability that plain or reinforced masonry exposed to environmental conditions conducive to deterioration will not be protected during the design life of the building, which could lead to premature deterioration, which could lead to excessive deformation of, or excessive stress in, masonry, which could lead to damage to the building.

**Provision: 4.2.3.5.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to the requirements of Subsection 4.3.3. with respect to the detailed design of concrete structures.

**Provision: 4.2.3.6.(1)**

---

**Objective**

OS2

**Attributions**

[F80-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability that concrete in foundations subject to chemical attack [e.g. sulphate attack, freeze-thaw action] will not be treated against chemical attack, which could lead to premature deterioration, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F80-OP2.3]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that concrete in foundations subject to chemical attack [e.g. sulphate attack, freeze-thaw action] will not be treated against chemical attack, which could lead to premature deterioration, which could lead to excessive deformation of, or excessive stress in, the concrete, which could lead to damage to the building.

---

### **Provision: 4.2.3.7.(1)**

### **Intent(s)**

*Intent 1.* To direct Code users to the requirements of Subsection 4.3.3. or 4.3.4. with respect to the detailed design of steel components.

---

### **Provision: 4.2.3.8.(1)**

### **Objective**

OS2

### **Attributions**

[F20-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability that steel in deep load-bearing pile foundations will not be resistant to brittle fracture during pile driving, which could lead to loss of bearing capacity, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.3]

### **Intent(s)**

*Intent 1.* To limit the probability that steel in deep load-bearing pile foundations will not be resistant to brittle fracture during pile driving, which could lead to excessive displacement of the foundations, which could lead to damage to the building.

---

### **Provision: 4.2.3.9.(1)**

### **Objective**

OS2

### **Attributions**

[F20, F80-OS2.5, OS2.6]

### **Intent(s)**

*Intent 1.* To limit the probability that high-strength steel tendons in concrete foundation or excavation support systems will not be resistant to corrosion or failure in bond to concrete, which could lead to loss of bearing capacity, which could lead to excessive displacement of ground, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20, F80-OP2.6, OP2.5]

**Intent(s)**

*Intent 1.* To limit the probability that high-strength steel tendons in concrete foundation systems will not be resistant to corrosion or failure in bond to concrete, which could lead to loss of bearing capacity, which could lead to excessive displacement of ground, which could lead to damage to the building.

---

**Objective**

OP4

**Attributions**

[F20, F80-OP4.1, OP4.4]

**Intent(s)**

*Intent 1.* To limit the probability that high-strength steel tendons in temporary supports of soil or rock adjacent to an excavation will not be resistant to corrosion or failure in bond to concrete, which could lead to loss of bearing capacity, which could lead to excessive displacement of ground, which could lead to damage to adjacent buildings.

---

**Provision: 4.2.3.10.(1)**

---

**Objective**

OS2

**Attributions**

[F80-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability that steel components in foundation systems will be exposed to aggressive environmental conditions, which could lead to premature corrosion, which could lead to loss of bearing capacity, which could lead to excessive displacement of the foundation, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to Article 1.2.1.1. for materials other than described in this Subsection.

---

**Objective**

OP2

**Attributions**

[F80-OP2.3]

**Intent(s)**

*Intent 1.* To limit the probability that steel components in foundation systems will be exposed to aggressive environmental conditions, which could lead to premature corrosion, which could lead to loss of bearing capacity, which could lead to excessive displacement of the foundation, which could lead to damage to the building.

*Intent 2.* To direct Code users to Article 1.2.1.1. for materials other than described in this Subsection.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP4

### **Attributions**

[F80-OP4.1]

### **Intent(s)**

*Intent 1.* To limit the probability that steel components in temporary support of adjacent ground, will be exposed to aggressive environmental conditions, which could lead to premature corrosion, which could lead to loss of bearing capacity, which could lead to excessive displacement of ground, which could lead to damage to adjacent buildings.

*Intent 2.* To direct Code users to Article 1.2.1.1. for materials other than described in this Subsection.

---

### **Provision: 4.2.4.1.(1)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.2, OS2.6] [F21-OS2.6]

### **Intent(s)**

*Intent 1.* To limit the probability that the method of design of foundations, excavations and soil- and rock-retaining structures will not be based on:

- a subsurface investigation carried out in accordance with Section 4.2., and
- generally accepted geotechnical and civil engineering principles, established local practice or in situ testing of foundation units.

This is to limit the probability of structural failure, including excavation collapse, which could lead to harm to persons.

*Intent 2.* To facilitate, through qualification of persons involved with the design and testing, the determination of compliance with this requirement.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.2] [F21-OP2.5]

### **Intent(s)**

*Intent 1.* To limit the probability that the method of design of foundations, excavations and soil- and rock-retaining structures will not be based on:

- a subsurface investigation carried out in accordance with Section 4.2., and
- generally accepted geotechnical and civil engineering principles, established local practice or in situ testing of foundation units.

This is to limit the probability of the excessive displacement of foundations, which could lead to damage to the building.

*Intent 2.* To facilitate, through qualification of persons involved with the design and testing, the determination of compliance with this requirement.

---

**Objective**

OP4

**Attributions**

[F21-OP4.1, OP4.4]

**Intent(s)**

*Intent 1.* To limit the probability that the method of design of foundations, excavations and soil- and rock-retaining structures will not be based on:

- a subsurface investigation carried out in accordance with Section 4.2., and
- generally accepted geotechnical and civil engineering principles, established local practice or in situ testing of foundation units.

This is to limit the probability of excessive displacement of the ground, which could lead to damage to adjacent buildings.

*Intent 2.* To facilitate, through qualification of persons involved with the design and testing, the determination of compliance with this requirement.

---

**Provision: 4.2.4.1.(2)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Section 4.1. for the determination of loads for the design of foundations of buildings, and to Subsection 4.1.3. for the limit states design method for the design of foundations of buildings.

---

**Provision: 4.2.4.1.(3)**

---

**Intent(s)**

*Intent 1.* To facilitate the determination of compliance with the requirements of Part 4.

---

**Provision: 4.2.4.1.(4)**

---

**Intent(s)**

*Intent 1.* To facilitate the determination of compliance with the requirements of Part 4.

---

**Provision: 4.2.4.1.(5)**

---

**Objective**

OS2

**Attributions**

[F21-OS2.5]

**Intent(s)**

*Intent 1.* To limit the probability that the design of foundations will not take into account the serviceability limit state requirements, including the maximum expected total and differential settlement of the foundation system, which could lead to structural failure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP2

### **Attributions**

[F21-OP2.4, OP2.5]

### **Intent(s)**

*Intent 1.* To limit the probability that the design of foundations will not take into account the serviceability limit state requirements, including the maximum expected total and differential settlement of the foundation system, which could lead to the excessive displacement of foundations, which could lead to:

- damage to the building, or
- excessive distortion of the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.2.4.1.(6)**

---

### **Intent(s)**

*Intent 1.* To facilitate the transfer of information between the designer and the geotechnical engineer.

---

### **Provision: 4.2.4.2.(1)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.2, OS2.6] [F21-OS2.6]

### **Intent(s)**

*Intent 1.* To limit the probability that the subsurface investigation will not be to sufficient depth or extent for the design and construction of the excavation and foundation system, which could lead to insufficient capacity of the foundations or insufficient stability of the excavation, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.2] [F21-OP2.6]

### **Intent(s)**

*Intent 1.* To limit the probability that the subsurface investigation will not be to sufficient depth or extent for the design and construction of the foundation system, which could lead to excessive displacement of the foundation, which could lead to damage to the building.

---

### **Objective**

OP4

### **Attributions**

[F21-OP4.1, OP4.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the subsurface investigation will not be to sufficient depth or extent for the design and construction of the excavation system, which could lead to excessive displacement of ground or insufficient stability of the excavation, which could lead to damage to adjacent buildings.

---

**Provision: 4.2.4.3.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.2, OS2.6] [F21-OS2.6]

**Intent(s)**

*Intent 1.* To limit the probability that the identification and classification of ground materials will not be stated in terms that are commonly understood in practice for verification, which could lead to insufficient capacity of the foundations or insufficient stability of the excavation, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.2] [F21-OP2.6]

**Intent(s)**

*Intent 1.* To limit the probability that the identification and classification of ground materials will not be stated in terms that are commonly understood in practice for verification, which could lead to excessive displacement of the foundation, which could lead to damage to the building.

---

**Objective**

OP4

**Attributions**

[F21-OP4.1, OP4.4]

**Intent(s)**

*Intent 1.* To limit the probability that the identification and classification of ground materials will not be stated in terms that are commonly understood in practice for verification, which could lead to excessive displacement of ground or insufficient stability of the excavation, which could lead to damage to adjacent buildings.

---

**Provision: 4.2.4.4.(1)**

---

**Objective**

OP2

**Attributions**

[F21-OP2.4] Applies to portion of Code text: "... the *bearing surface* of a *foundation* shall be below the level of potential damage, including damage resulting from *frost action* ..."

**Intent(s)**

*Intent 1.* To limit the probability that frost action will occur below a foundation unit, which could lead to excessive upward displacement of the unit, which could lead to:

- damage to the building, and

---

## **Intent Statements: NBC 2010**

- excessive distortion of the building, which could impede the intended use and occupancy of the building.

---

### **Objective**

OP2

### **Attributions**

[F21-OP2.4] Applies to portion of Code text: "... the *foundation* shall be designed to prevent damage resulting from *adfreezing* and frost jacking."

### **Intent(s)**

*Intent 1.* To limit the probability that a foundation unit will not be designed to prevent adfreezing and frost jacking, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the intended use and occupancy of the building.

---

### **Provision: 4.2.4.4.(2)**

---

### **Objective**

OP2

### **Attributions**

[F21-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that a foundation unit will not be designed for frost action expected to occur below the foundation, which could lead to excessive upward displacement of the unit, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the intended use and occupancy of the building.

*Intent 2.* To exempt from the application of Sentence 4.2.4.4.(1) foundations where conditions are such that they are unlikely to be negatively affected by frost action.

---

### **Provision: 4.2.4.5.(1)**

---

### **Objective**

OS2

### **Attributions**

[F21-OS2.2]

### **Intent(s)**

*Intent 1.* To limit the probability that the design of a foundation on, in or near sloping ground will not take into account the likelihood of slope failure, which could lead to excessive movement of ground, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F21-OP2.2, OP2.6, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of foundations on, in or near sloping ground will not take into account the likelihood of slope movements, which could lead to:

- excessive soil forces or displacement of the foundation, which could lead to damage to the building, and
- excessive displacement of the foundation, which could lead to excessive distortion of the building, which could impede the intended use and occupancy of the building.

**Provision: 4.2.4.6.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1, OS2.2]

**Intent(s)**

*Intent 1.* To limit the probability that the design of foundations will not take into account the eccentricity or inclination of loads applied to the foundation units, which could lead to structural failure, which could lead to harm to persons.

**Objective**

OP2

**Attributions**

[F20-OP2.1, OP2.2, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of foundations will not take into account the eccentricity or inclination of loads applied to the foundation units, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the intended use and occupancy of the building.

**Provision: 4.2.4.7.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.2]

**Intent(s)**

*Intent 1.* To limit the probability that the design of foundations will not take into account the dynamic loading applied to the foundation units, such as due to earthquake, which could lead to liquefaction of soil, which could lead to structural failure, which could lead to harm to persons.

**Objective**

OP2

**Attributions**

[F20-OP2.2, OP2.6, OP2.4]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that the design of foundations will not take into account the dynamic loading applied to the foundation units, such as due to earthquake, which could lead to excessive displacement of the foundation, which could lead to damage to the building.

*Intent 2.* To limit the probability that the design of foundations will not take into account the dynamic loading conditions, which could lead to excessive movement of the foundation, which could lead to excessive distortion or vibration of the building, which could impede the use and occupancy of the building.

---

### **Objective**

OH4

### **Attributions**

[F20-OH4]

### **Intent(s)**

*Intent 1.* To limit the probability that the design of foundations will not take into account the dynamic loading conditions, such as due to machinery or ground-transmitted vibrations, which could lead to excessive vibration of the building, which could lead to negative effects on the psychological well-being of persons.

---

## **Provision: 4.2.4.8.(1)**

### **Objective**

OP2

### **Attributions**

[F22-OP2.1, OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the foundations will be displaced due to hydrostatic uplift, either during construction or during the life of the building, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the intended use and occupancy of the building.

---

## **Provision: 4.2.4.9.(1)**

### **Objective**

OP4

### **Attributions**

[F21-OP4.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the excavation and construction procedure will result in a temporary or permanent change in groundwater level, which could lead to excessive displacement of ground, which could lead to damage to adjacent buildings.

**Provision: 4.2.4.10.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.2] [F21-OS2.5]

**Intent(s)**

*Intent 1.* To limit the probability that the design of foundations on permafrost will not take into account the seasonal and long-term changes in soil properties and ground displacements as they affect the foundations, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To facilitate, through qualification of persons especially qualified in foundations on permafrost, the determination of compliance with this requirement.

---

**Objective**

OP2

**Attributions**

[F20-OP2.2, OP2.4] [F21-OP2.6, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of foundations on permafrost will not take into account the seasonal and long-term changes in soil properties and ground displacements as they affect the foundations, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the intended use and occupancy of the building

*Intent 2.* To facilitate, through qualification of persons especially qualified in foundations on permafrost, the determination of compliance with this requirement.

**Provision: 4.2.4.11.(1)**

---

**Objective**

OP2

**Attributions**

[F21-OP2.6, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design of foundations, including ground floors, will not take into account the dimensional changes in soils, for example due to soil dewatering by trees, which could lead to excessive displacement of ground, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the intended use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.2.4.12.(1)**

---

#### **Objective**

OP2

#### **Attributions**

[F21-OP2.6, OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the design of foundations, including ground floors, will not take into account the dimensional changes in rock materials, for example due to moisture changes or stress release, which could lead to excessive displacement of ground, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the intended use and occupancy of the building.

### **Provision: 4.2.4.13.(1)**

---

#### **Objective**

OS2

#### **Attributions**

4.2.4.13.(1)(a) [F20-OS2.2] [F21-OS2.5]

#### **Intent(s)**

*Intent 1.* To limit the probability that placing a building on fill will not take into account the soil properties of the fill, which could lead to insufficient capacity of the foundation, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

4.2.4.13.(1)(b) [F20-OP2.2, OP2.4] [F21-OP2.6, OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that placing a building on fill will not take into account the soil properties of the fill, which could lead to:

- excessive displacement of ground, which could lead to damage to the building, and
- excessive displacements of the foundation, which could lead to excessive distortion of the building, which could impede the intended use and occupancy of the building.

---

#### **Objective**

OS1

#### **Attributions**

4.2.4.13.(1)(c) [F01-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that placing a building on fill will not take into account the presence of explosive gases and their control, which could lead to an explosion, which could lead to harm to persons.

**Provision: 4.2.4.14.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to requirements for the structural design of building foundations, and the procedures and practices of their construction, in Sections of the Code, for example sections 4.1. and 4.3.

**Provision: 4.2.5.1.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to the requirements of Subsection 4.2.4. and this Subsection for the design of excavations and supports for the sides of excavations.

**Provision: 4.2.5.2.(1)**

---

**Objective**

OP4

**Attributions**

[F21-OP4.1]

**Intent(s)**

*Intent 1.* To limit the probability that an excavation procedure will not take into account the expected ground movements during all phases of construction, which could lead to the excessive displacement of ground, which could lead to damage to adjacent buildings.

*Intent 2.* To direct Code users to Part 8 for other requirements applicable to excavations.

**Provision: 4.2.5.2.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.6]

**Intent(s)**

*Intent 1.* To limit the probability that, during construction, loads placed adjacent to an excavation will not be greater than the capacity of the excavation, including its supports, which could lead to the collapse of the excavation, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.3]

**Intent(s)**

*Intent 1.* To limit the probability that, during construction, loads placed adjacent to an excavation will not be greater than those the excavation, including its supports, was designed for, which could lead to excessive displacement of ground, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP4

### **Attributions**

[F20, F21-OP4.1]

### **Intent(s)**

*Intent 1.* To limit the probability that, during construction, loads placed adjacent to an excavation will not be greater than those the excavation, including its supports, was designed for, which could lead to excessive displacement of ground, which could lead to damage to adjacent buildings.

---

### **Provision: 4.2.5.3.(1)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.6]

### **Intent(s)**

*Intent 1.* To limit the probability that, during construction, the sides of an excavation will not be supported in accordance with the structural design requirements of Part 4, which could lead to the collapse of the excavation, which could lead to harm to persons.

*Intent 2.* To direct Code users to the requirements of Articles 4.2.5.1. and 4.2.5.2. with respect to design and construction of excavation supports.

---

### **Objective**

OP4

### **Attributions**

[F21-OP4.1]

### **Intent(s)**

*Intent 1.* To limit the probability that, during construction, the sides of an excavation will not be supported in accordance with the structural design requirements of Part 4, which could lead to excessive displacement of ground, which could lead to damage to adjacent buildings.

*Intent 2.* To direct Code users to the requirements of Articles 4.2.5.1. and 4.2.5.2. with respect to design and construction of excavation supports.

---

### **Provision: 4.2.5.4.(1)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.6]

### **Intent(s)**

*Intent 1.* To limit the probability that, during construction, the sides of the unsupported excavation will not be stable, which could lead to the collapse of the excavation, which could lead to harm to persons.

*Intent 2.* To direct Code users to the requirements of Articles 4.2.5.1. and 4.2.5.2. with respect to design and construction of unsupported excavations.

*Intent 3.* To exempt unsupported excavations from the requirements of Sentence 4.2.5.3.(1).

---

**Objective**

OP4

**Attributions**

[F21-OP4.1]

**Intent(s)**

*Intent 1.* To limit the probability that, during construction, the sides of the unsupported excavation will not be stable, which could lead to excessive displacement of ground, which could lead to damage to adjacent buildings.

*Intent 2.* To direct Code users to the requirements of Articles 4.2.5.1. and 4.2.5.2. with respect to design and construction of unsupported excavations.

*Intent 3.* To exempt unsupported excavations from the requirements of Sentence 4.2.5.3.(1).

---

**Provision: 4.2.5.5.(1)**

---

**Objective**

OS2

**Attributions**

[F60-OS2.6]

**Intent(s)**

*Intent 1.* To limit the probability that pressure due to groundwater around excavations will lead to the instability of an excavation or to ground heaving, which could lead to the collapse of ground, which could lead to harm to persons.

---

**Objective**

OP4

**Attributions**

[F60-OP4.1, OP4.4]

**Intent(s)**

*Intent 1.* To limit the probability that pressure due to groundwater around excavations will lead to the instability of an excavation or to ground heaving, which could lead to excessive displacement of ground, which could lead to damage to adjacent buildings.

---

**Provision: 4.2.5.6.(1)**

---

**Objective**

OP4

**Attributions**

[F21-OP4.1]

**Intent(s)**

*Intent 1.* To limit the probability that loss of ground behind excavations will occur due to water flow or any other cause, such as densification of loose cohesionless soils, which could lead to excessive displacement of ground, which could lead to damage to adjacent buildings.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.2.5.7.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F80-OS2.6]

#### **Intent(s)**

*Intent 1.* To limit the probability that deterioration of the ground surrounding the excavation, or of the excavation supports, will occur, which could lead to the collapse of the excavation, which could lead to harm to persons.

---

#### **Objective**

OP4

#### **Attributions**

[F80-OP4.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that deterioration of the ground surrounding the excavation, or of the excavation supports, will occur, which could lead to excessive displacement of ground, which could lead to damage to adjacent buildings.

### **Provision: 4.2.5.8.(1)**

---

#### **Objective**

OS2

#### **Attributions**

4.2.5.8.(1)(a) [F21-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that backfill will not be sufficiently compact to support adjacent soil or will undergo volume changes, which could lead to excessive vertical and lateral displacements of the ground after construction, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

4.2.5.8.(1)(a) [F21-OP2.1, OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that backfill will not be sufficiently compact to support adjacent soil or will undergo volume changes, which could lead to excessive vertical and lateral displacements of the ground after construction, which could lead to damage to the building.

---

#### **Objective**

OP4

#### **Attributions**

[F21-OP4.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that backfill will not be sufficiently compact to support adjacent soil or will undergo volume changes, which could lead to excessive vertical and lateral displacements of the ground after construction, which could lead to damage to adjacent buildings.

---

**Provision: 4.2.5.8.(2)**

---

**Objective**

OP2

**Attributions**

[F21-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that backfill supporting foundations or ground floors will undergo large volume changes, which could lead to excessive displacements of the foundations or ground floors, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the intended use and occupancy of the building.

---

**Provision: 4.2.6.1.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to the requirements of Subsection 4.2.4. and this Subsection for the design of shallow foundations.

---

**Provision: 4.2.6.2.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.2]

**Intent(s)**

*Intent 1.* To limit the probability that the condition of soil or rock directly below a shallow foundation will not be in accordance with the assumptions used for the design of the foundation system, which could lead to insufficient capacity of the foundation, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.2, OP2.4] [F21-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the condition of soil or rock directly below a shallow foundation will not be in accordance with the assumptions used for the design of the foundation system, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- excessive building distortion, which could impede the use and occupancy of the building.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.2.6.3.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that a shallow foundation unit will not be located in accordance with the assumptions used for the design of the foundation system, which could lead to insufficient capacity of the foundation unit, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to the requirement of Article 2.2.4.7. with respect to the recording of alterations on the design drawings.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.2, OP2.4] [F21-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that a shallow foundation unit will not be located in accordance with the assumptions used for the design of the foundation system, which could lead to excessive displacement of the foundation unit, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the use and occupancy of the building.

*Intent 2.* To direct Code users to the requirement of Article 2.2.4.7. with respect to the recording of alterations on the design drawings.

### **Provision: 4.2.6.4.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that a damaged shallow foundation unit will not have sufficient capacity to resist the maximum expected loads, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to the requirement of Article 2.2.4.7. concerning the recording of alterations on the design drawings.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.4] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that a damaged shallow foundation unit will deform substantially due to the expected loads, which could lead to excessive displacement of the foundation unit, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the use and occupancy of the building.

*Intent 2.* To direct Code users to the requirement of Article 2.2.4.7. concerning the recording of alterations on the design drawings.

---

**Provision: 4.2.7.1.(1)**

---

**Intent(s)**

*Intent 1.* To define a deep foundation unit by how it transfers load into the ground.

---

**Provision: 4.2.7.2.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to the requirements of Subsection 4.2.4. and this Subsection with respect to the design of deep foundation units.

---

**Provision: 4.2.7.2.(2)**

---

**Intent(s)**

*Intent 1.* To facilitate, through qualification of persons involved with the planning of load tests and the interpretation of results, the determination of compliance with Clause 4.2.4.1.(1)(c).

---

**Provision: 4.2.7.2.(3)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1, OS2.2] [F21-OS2.5]

**Intent(s)**

*Intent 1.* To limit the probability that geotechnical and other considerations relating to installation, inspection and configuration of deep foundations will not be taken into account in their design, which could lead to insufficient capacity of foundation units, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to other requirements of this Subsection for the design, as well as to Subsections 4.3.1., Subsection 4.3.3., and 4.3.4., and to the appropriate structural requirements of Section 4.1.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1, OP2.2] [F21, F22-OP2.4]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that geotechnical and other considerations relating to installation, inspection and configuration of deep foundations will not be taken into account in their design, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the use and occupancy of the building.

*Intent 2.* To direct Code users to other requirements of this Subsection for the design, as well as to Subsections 4.3.1., Subsection 4.3.3., and 4.3.4., and to the appropriate structural requirements of Section 4.1.

---

### **Provision: 4.2.7.2.(4)**

#### **Intent(s)**

*Intent 1.* To expand the application of Sentence 4.2.7.2.(5) to allow the assumption of lateral support for those parts of deep foundation units permanently in contact with soil or rock.

---

### **Provision: 4.2.7.2.(5)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the lateral buckling of a deep foundation unit due to the lack of ground support will not be taken into account in its design, which could lead to insufficient capacity of the foundation unit, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.4] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the lateral buckling of a deep foundation unit due to the lack of ground support will not be taken into account in its design, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the use and occupancy of the building.

---

### **Provision: 4.2.7.2.(6)**

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.4]

#### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that damage to a prefabricated deep foundation unit resulting from driving, handling and testing the unit will not be taken into account in its design, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the use and occupancy of the building.

---

### **Provision: 4.2.7.3.(1)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that deviations in alignment of a deep foundation unit, and the location of the top will not be taken into account in its design, manufacture and installation, which could lead to insufficient capacity of the foundation unit, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.4] [F22-OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that deviations in alignment of a deep foundation unit, and the location of the top will not be taken into account in its design, manufacture and installation, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- distortion of the building, which could impede the use and occupancy of the building.

---

### **Provision: 4.2.7.4.(1)**

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that an installed deep foundation unit, with deviations in alignment and location outside those assumed for its design, will not have sufficient capacity to resist the maximum expected loads, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to the requirement of Article 2.2.4.7. concerning the recording of alterations on the design drawings.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1, OP2.4] [F22-OP2.4]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability that an installed deep foundation unit, with deviations in alignment and location outside those assumed for its design, will undergo a large deformation under the expected loads, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- excessive distortion of the building, which could impede the use and occupancy of the building.

*Intent 2.* To direct Code users to the requirement of Article 2.2.4.7. concerning the recording of alterations on the design drawings.

### **Provision: 4.2.7.5.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F81-OS2.1] [F21-OS2.2, OS2.6]

#### **Intent(s)**

*Intent 1.* To limit the probability that the method of installation of deep foundation units will impair:

- the properties of soil or rock,
- the strength and integrity of previously installed units, and
- the integrity of neighbouring buildings.

This is to limit the probability of installing a foundation with a reduced capacity, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP4

#### **Attributions**

4.2.7.5.(1)(c) [F21-OP4.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the method of installation of deep foundation units will impair:

- the properties of soil or rock,
- the strength and integrity of previously installed units, and
- the integrity of neighbouring buildings.

This is to limit the probability of the excessive displacement of ground, which could lead to damage to adjacent buildings.

---

#### **Objective**

OP2

#### **Attributions**

4.2.7.5.(1)(a), 4.2.7.5.(1)(b) [F81-OP2.1, OP2.4] [F21-OP2.2, OP2.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the method of installation of a deep foundation unit will impair the properties of soil or rock, and the strength and integrity of previously installed units, which could lead to excessive displacement of the foundation, which could lead to:

- damage to the building, and
- distortion of the building, which could impede the use and occupancy of the building.

**Provision: 4.2.7.6.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that a damaged or defective deep foundation unit will have insufficient capacity to resist the maximum expected loads, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to the requirement of Article 2.2.4.7. concerning the recording of alterations on the design drawings.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that a damaged or defective deep foundation unit will deform substantially due to the expected loads, which could lead to excessive displacement of the foundation unit, which could lead to:

- damage to the building, and
- distortion of the building, which could impede the use and occupancy of the building.

*Intent 2.* To direct Code users to the requirement of Article 2.2.4.7. concerning the recording of alterations on the design drawings.

**Provision: 4.2.8.1.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to the design requirements of Subsection 4.2.4. and to the requirements in Article 1.2.1.1. with respect to equivalents to the design requirements of Part 4.

**Provision: 4.2.8.2.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1, OS2.2]

**Intent(s)**

*Intent 1.* To limit the probability that an existing foundation supporting a new building or altered existing building will not have sufficient capacity to resist the maximum expected loads, which could lead to structural failure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1, OP2.2] [F22-OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that an existing foundation supporting a new building or altered existing building will deform substantially due to the expected loads, which could lead to excessive displacement of the existing foundation, which could lead to:

- damage to the building, and
- distortion of the building, which could impede the use and occupancy of the building.

---

### **Provision: 4.3.1.1.(1)**

---

### **Objective**

OH4

### **Attributions**

[F22, F21, F80-OH4]

### **Intent(s)**

*Intent 1.* To limit the probability that the detailed design of wood structural components and systems is not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to excessive deflection or excessive vibration of structural members, which could lead to negative effects on the psychological well-being of persons.

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1] [F80-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the detailed design of wood structural components and systems will not be carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20-OP2.1] [F21, F22-OP2.4] [F80-OP2.3, OP2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the detailed design of wood structural components and systems will not be carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to:

- excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building, and
- excessive deflection or excessive vibration of structural members, which could impede the intended use and occupancy of the building.

**Provision: 4.3.1.2.(1)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability that the fabrication of glued-laminated wood structural components will result in structural properties, during the expected life of the building, that are less than those assumed for design in accordance with CAN/CSA-O177-M, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F20-OP2.1] [F21, F22-OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the fabrication of glued-laminated wood structural components results in structural properties during the expected life of the building, which are less than those assumed for design in accordance with CAN/CSA-O177-M, which could lead to:

- excessive deformation of, or excessive stress in, structural components, which could lead to damage to the building, and
- excessive deflection or excessive vibration of structural members, which could impede the intended use and occupancy of the building.

---

**Objective**

OH4

**Attributions**

[F21, F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that the fabrication of glued-laminated wood structural components results in structural properties during the expected life of the building, which are less than those assumed for design in accordance with CAN/CSA-O177-M, which could lead to excessive deflection or excessive vibration of structural members, which could lead to negative effects on the psychological well-being of persons.

**Provision: 4.3.1.3.(1)**

---

**Intent(s)**

*Intent 1.* To expand the application of Article 9.3.2.9. and Articles 9.12.1.1. and 9.15.5.1. to include wood structural members of buildings to which Part 4 applies.

---

## **Intent Statements: NBC 2010**

### **Provision: 4.3.2.1.(1)**

---

#### **Objective**

OH4

#### **Attributions**

[F21, F22, F80-OH4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the detailed design of plain and reinforced masonry components and systems is not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to excessive deflection or excessive vibration of structural members, which could lead to negative effects on the psychological well-being of persons.

### **Provision: 4.3.6.1.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the detailed design of glass is not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the detailed design of glass is not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to excessive deflection or excessive vibration of glass windows, which could impede the use and occupancy of the building.

### **Provision: 4.4.1.1.(1)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.1] [F80-OS2.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that the detailed design, erection and maintenance of air-supported structures are not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to structural failure, which could lead to harm to persons.

---

#### **Objective**

OP2

#### **Attributions**

[F20-OP2.1] [F22-OP2.4] [F80-OP2.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that the detailed design, erection and maintenance of air-supported structures are not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to:

- excessive deflection or excessive vibration of the structure, which could lead to damage to the building, and
- excessive deflection or excessive vibration of the structure, which could impede the intended use and occupancy of the building.

---

**Objective**

OH4

**Attributions**

[F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that the detailed design, erection and maintenance of air-supported structures are not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to excessive deflection or excessive vibration of the structure, which could lead to negative effects on the psychological well-being of persons.

---

**Provision: 4.4.2.1.(1)**

---

**Objective**

OS2

**Attributions**

[F21, F61, F80-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability that the design, construction and maintenance of new parking structures for durability are not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to deterioration of structural components, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OP2

**Attributions**

[F21, F61, F80-OP2.3, OP2.4]

**Intent(s)**

*Intent 1.* To limit the probability that the design, construction and maintenance of new parking structures for durability are not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to:

- deterioration of structural components, which could lead to damage to the building, and
- deterioration and damage of structural members, which could impede the intended use and occupancy of the building.

---

**Objective**

OH4

**Attributions**

[F21, F61, F80-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that the design, construction and maintenance of parking structures for durability are not carried out in accordance with a suitable comprehensive standard in harmony with the detailed requirements of Part 4, which could lead to deterioration of structural members, which could lead to floor damage, which could lead to negative effects on the psychological well-being of persons.

---

## **Intent Statements: NBC 2010**

---

### **Provision: 5.1.1.1.(1)**

---

#### **Intent(s)**

*Intent 1.* To state the scope of Part 5.

---

### **Provision: 5.1.2.1.(1)**

---

#### **Intent(s)**

*Intent 1.* To state the application of Part 5.

---

### **Provision: 5.1.3.1.(1)**

---

#### **Intent(s)**

*Intent 1.* To direct Code users to the definitions provided in Article 1.4.1.2.

---

### **Provision: 5.1.4.1.(1)**

---

#### **Objective**

OH1

#### **Attributions**

5.1.4.1.(1)(a) [F55, F61, F63-OH1.1, OH1.2, OH1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to expected environmental loads and deterioration, which could lead to:

- air infiltration and exfiltration,
- excessive heat loss or gain,
- condensation,
- precipitation ingress,
- moisture ingress from the ground, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS3

**Attributions**

[F20-OS3.1] Applies to snow fences and sloped glazing.

**Intent(s)**

*Intent 1.* For snow fences and sloped glazing, to limit the probability of an inadequate resistance to loads from sliding and falling snow, which could lead to snow or ice falling from the building, which could lead to harm to persons.

---

**Objective**

OH4

**Attributions**

[F61-OH4]

**Intent(s)**

*Intent 1.* To limit the probability of inadequate resistance to rot, corrosion or freeze-thaw cycling, which could lead to damage or deterioration, which could lead to vibration or deflection of floor assemblies or elements that support floor assemblies, which could lead to negative effects on the psychological well-being of persons.

---

**Objective**

OS2

**Attributions**

5.1.4.1.(1)(a) [F60, F61, F63-OS2.2, OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to expected environmental loads and deterioration, which could lead to:

- excessive heat loss or gain,
- condensation,
- precipitation ingress, or
- moisture ingress from the ground.

This is to limit the probability of:

- deterioration, which could lead to compromised structural integrity of separators or of elements protected by separators, and
- the freezing of soils on which foundations bear, which could lead to the displacement of structural elements.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

5.1.4.1.(1)(a) [F20, F51, F55-OS1.4] Applies where required life safety systems are incorporated in environmental separators.

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability of an inadequate resistance to expected environmental loads and deterioration, which could lead to:

- condensation,
- precipitation ingress, or
- moisture ingress from the ground.

Where required life safety systems are incorporated in environmental separators, this is to limit the probability of compromised operation of temperature-sensitive or moisture-sensitive life safety systems, which could lead to harm to persons.

---

### **Objective**

OS2

### **Attributions**

5.1.4.1.(1)(b) [F20-OS2.1] [F21, F22-OS2.3, OS2.4]

### **Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to expected structural loads and the effects of those loads, and to deterioration, which could lead to:

- insufficient strength, which could lead to:
  - compromised structural integrity, or
  - damage to or deterioration of building elements, or
- the displacement, deflection or vibration of required environmental separation elements, which could lead to:
  - air infiltration and exfiltration,
  - condensation,
  - precipitation ingress, or
  - moisture ingress from the ground.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

### **Objective**

OH1

### **Attributions**

5.1.4.1.(1)(b) [F20, F21, F22-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to expected structural loads and the effects of those loads, and to deterioration, which could lead to:

- insufficient strength, or
- the displacement, deflection or vibration of required environmental separation elements, which could lead to:
  - air infiltration and exfiltration,
  - condensation,
  - precipitation ingress,
  - moisture ingress from the ground, or
  - pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

---

## Intent Statements: NBC 2010

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### Objective

OH4

### Attributions

5.1.4.1.(1)(b) [F20-OH4]

### Intent(s)

*Intent 1.* To limit the probability of an inadequate resistance to expected structural loads, which could lead to insufficient strength, which could lead to:

- compromised structural integrity, or
- damage to or deterioration of building elements.

This is to limit the probability of excessive deflection or vibration of floors, which could lead to negative effects on the psychological well-being of persons.

---

### Provision: 5.1.4.1.(2)

---

### Intent(s)

*Intent 1.* To state the application of Subsection 5.2.1.

*Intent 2.* To direct Code users to Subsection 5.2.1., which contains requirements related to compliance with Clause 5.1.4.1.(1)(a).

---

### Provision: 5.1.4.1.(3)

---

### Intent(s)

*Intent 1.* To state the application of Subsection 5.2.2.

*Intent 2.* To direct Code users to Subsection 5.2.2., which contains requirements related to compliance with Clause 5.1.4.1.(1)(b).

---

### Objective

OS2

### Attributions

[F20-OS2.1] [F21, F22-OS2.3, OS2.4]

### Intent(s)

*Intent 1.* To limit the probability that important loads will not be adequately addressed in the design of environmental separators, which could lead to an inadequate resistance to expected structural loads, which could lead to:

---

## **Intent Statements: NBC 2010**

- deflection, or
- damage and deterioration.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

### **Objective**

OH1

### **Attributions**

[F20, F21, F22-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that important loads will not be adequately addressed in the design of environmental separators, which could lead to an inadequate resistance to expected structural loads, which could lead to:

- deflection, or
- damage and deterioration.

This is to limit the probability of:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress,
- moisture ingress from the ground, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is limit the probability of harm to persons.

---

## **Provision: 5.1.4.1.(4)**

### **Intent(s)**

*Intent 1.* [Clause 5.1.4.1.(4)(a)] To expand the application of Subsection 5.2.2. to include individual loads that are not mentioned in Sentence 5.1.4.1.(3).

*Intent 2.* [Clause 5.1.4.1.(4)(b)] To exempt common materials and their installation from having to be structurally designed for individual applicable loads (those that are not mentioned in Sentence 5.1.4.1.(3)) in accordance with Subsection 5.2.2., if there is sufficient evidence of proven past performance over a period of several years.

---

**Objective**

OS2

**Attributions**

5.1.4.1.(4)(a) [F20-OS2.1] [F21, F22-OS2.3, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability of using inadequate design procedures for environmental separation elements that are subject to structural loads, which could lead to insufficient capacity and integrity of such elements to resist or accommodate such loads, which could lead to:

- deflection, or
- damage and deterioration.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

**Objective**

OH1

**Attributions**

5.1.4.1.(4)(a) [F20, F21, F22-OH1.1, OH1.2, OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability of using inadequate design procedures for environmental separation elements that are subject to structural loads.

This is to limit the probability of insufficient capacity and integrity of such elements to resist or accommodate such loads, which could lead to damage and deterioration of building elements, which could lead to:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress,
- moisture ingress from the ground, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

5.1.4.1.(4)(b) [F20-OS2.1] [F21, F22-OS2.3, OS2.4]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability of using insufficient time periods to assess proven past performance for the installation of environmental separation elements that are subject to structural loads, which could lead to insufficient capacity and integrity of such elements to resist or accommodate such loads, which could lead to:

- structural failure, or
- damage to and deterioration of building elements.

This is to limit the probability of harm to persons.

---

### **Objective**

OH1

### **Attributions**

5.1.4.1.(4)(b) [F20, F21, F22-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability of using insufficient time periods to assess proven past performance for the installation of environmental separation elements that are subject to structural loads.

This is to limit the probability of insufficient capacity and integrity of such elements to resist or accommodate such loads, which could lead to damage to and deterioration of building elements, which could lead to:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress,
- moisture ingress from the ground, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Provision: 5.1.4.1.(5)**

### **Objective**

OH1

### **Attributions**

[F20, F21, F22-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability of insufficient strength, dimensional stability and rigidity, which could lead to an inadequate resistance to expected structural loads, which could lead to excessive deflection,

movement or failure of required environmental separation elements, which could lead to damage or deterioration of such elements, which could lead to:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress,
- moisture ingress from the ground, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

5.1.4.1.(5)(a) [F20-OS2.1, OS2.3]

5.1.4.1.(5)(b) and 5.1.4.1.(5)(c) [F21, F22-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of:

- insufficient strength,
- insufficient rigidity, or
- excessive movement and dimensional instability.

This is to limit the probability of an inadequate resistance to expected structural loads, which could lead to excessive deflection, movement or failure of required environmental separation elements, which could lead to:

- structural failure, or
- damage to or deterioration of such elements.

This is to limit the probability of harm to persons.

---

**Objective**

OH4

**Attributions**

5.1.4.1.(5)(b) and 5.1.4.1.(5)(c) [F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability of:

- insufficient strength,
- insufficient rigidity, or

---

## **Intent Statements: NBC 2010**

- excessive movement and dimensional instability.

This is to limit the probability of excessive deflection, movement or vibration, which could lead to negative effects on the psychological well-being of persons.

---

### **Provision: 5.1.4.2.(1)**

#### **Objective**

OH1

#### **Attributions**

[F80, F81-OH1.1, OH1.2, OH1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability of material incompatibility or a high rate of deterioration in the expected service environment, which could lead to the premature failure of components and assemblies of environmental separators.

This is to limit the probability of:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress,
- moisture ingress from the ground, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

#### **Objective**

OS3

#### **Attributions**

[F80, F81-OS3.1] Applies to floor assemblies.

#### **Intent(s)**

*Intent 1.* For floor assemblies, to limit the probability of material incompatibility or a high rate of deterioration in the expected service environment, which could lead to the premature failure of building components.

This is to limit the probability of excessive deflection, movement or damage of floor assemblies, which could lead to persons tripping or falling, which could lead to harm to persons.

---

**Objective**

OH4

**Attributions**

[F80, F81-OH4] Applies to floor assemblies.

**Intent(s)**

*Intent 1.* For floor assemblies, to limit the probability of material incompatibility or a high rate of deterioration in the expected service environment, which could lead to the premature failure of building components.

This is to limit the probability of excessive deflection, movement or vibration of floor assemblies, which could lead to negative effects on the psychological well-being of persons.

---

**Objective**

OS2

**Attributions**

[F80, F81-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of material incompatibility or a high rate of deterioration in the expected service environment, which could lead to the premature failure of building components and assemblies.

This is to limit the probability of compromised structural integrity, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

[F80, F81-OS1.4] Applies where required life safety systems are incorporated in environmental separators.

**Intent(s)**

*Intent 1.* To limit the probability of material incompatibility or a high rate of deterioration in the expected service environment, which could lead to the premature failure of building components and assemblies.

Where required life safety systems are incorporated in environmental separators, this is to limit the probability of compromised operation of temperature-sensitive or moisture-sensitive life safety systems, which could lead to harm to persons.

---

**Provision: 5.1.4.2.(2)**

---

**Intent(s)**

*Intent 1.* To exempt situations from the application of Sentence 5.1.4.2.(1), where it can be shown that premature failure due to uncontrolled deterioration will not adversely affect health, safety, the intended use of the building or the operation of building services.

---

**Provision: 5.1.5.1.(1)**

---

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To expand the application of Part 4 to address components and assemblies of environmental separators that are subject to structural loads, with respect to the direct consequences of non-compliance with the objectives of Structural Safety, Structural Sufficiency of the Building and Vibration and Deflection Limitation.

*Intent 2.* To direct Code users to other Parts of the Code that apply to environmental separators.

---

### **Provision: 5.2.1.1.(1)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 1.1.3. for provisions that specify sources of information for defining exterior above-ground environmental loads such as temperature, precipitation and wind pressure.

---

### **Provision: 5.2.1.1.(2)**

#### **Objective**

OH1

#### **Attributions**

[F40, F20-OH1.1] [F20-OH1.2, OH1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability of using incorrect assumptions regarding below-ground environmental loads, such as temperature, vapour pressure, hydrostatic pressure, and soil gas concentrations, in the design of environmental separators, which could lead to inadequate performance or premature failure under expected environmental or structural loads.

This is to limit the probability of:

- air transfer from the ground,
- condensation,
- precipitation ingress,
- moisture ingress from the ground, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

[F20-OS2.1]

**Intent(s)**

*Intent 1.* To limit the probability of using incorrect assumptions regarding below-ground environmental loads, such as temperature, vapour pressure, hydrostatic pressure, and soil gas concentrations, in the design of environmental separators, which could lead to inadequate performance or premature failure under expected environmental or structural loads.

This is to limit the probability of:

- compromised integrity of supporting soils,
- reaction with contaminants and chemicals in the soil,
- condensation, or
- moisture ingress from the ground.

This is to limit the probability of:

- deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, and
- the freezing of soils on which foundations bear, which could lead to the displacement of structural elements.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

**Intent(s)**

*Intent 1.* To clarify the requirements in Part 4 that address subsurface conditions and whose Intent Statements identify the direct consequences of non-compliance with the objectives of Structural Safety, Structural Sufficiency of the Building, and Vibration and Deflection Limitation.

---

**Provision: 5.2.1.1.(3)**

---

**Intent(s)**

*Intent 1.* To exempt buildings from analysis of soil temperature, if they are designed and constructed according to local practice which has been demonstrated to be effective in minimizing condensation within and on the interior surfaces of assemblies in contact with the ground and, in conjunction with mechanical systems installed for space conditioning, in meeting the interior design thermal conditions.

---

**Provision: 5.2.1.2.(1)**

---

**Objective**

OH1

**Attributions**

[F51, F55, F61, F63-OH1.1, OH1.2]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that inappropriate assumptions will be made with regard to interior environmental load in the design of environmental separators, which could lead to the inadequate performance or premature failure of components and assemblies of environmental separators under expected environmental loads, which could lead to:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress, or
- moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting,
- deterioration, which could lead to further compromised integrity of environmental separators, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces, and
- the inadequate thermal comfort of persons.

This is to limit the probability of harm to persons.

*Intent 2.* To direct Code users to a source of information commonly used for defining interior environmental loads.

---

### **Objective**

OS2

### **Attributions**

[F55, F61, F63-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability that inappropriate assumptions will be made with regard to interior environmental load in the design of environmental separators, which could lead to the inadequate performance or premature failure of components and assemblies of environmental separators under expected environmental loads, which could lead to:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress, or
- moisture ingress from the ground.

This is to limit the probability of:

- deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, and
- the freezing of soils on which foundations bear, which could lead to the displacement of structural elements.

This is to limit the probability of structural failure, which could lead to harm to persons.

*Intent 2.* To direct Code users to a source of information commonly used for defining interior environmental loads.

---

**Objective**

OS1

**Attributions**

[F51, F61, F63, F55-OS1.4] Applies where required life safety systems are incorporated in environmental separators.

**Intent(s)**

*Intent 1.* To limit the probability that inappropriate assumptions will be made with regard to interior environmental load in the design of environmental separators, which could lead to the inadequate performance or premature failure of components and assemblies of environmental separators under expected environmental loads, which could lead to:

- air infiltration and exfiltration,
- excessive heat loss,
- condensation, or
- precipitation ingress.

Where life safety systems are required to be installed in environmental separators, this is to limit the probability of compromised operation of temperature-sensitive or moisture-sensitive life safety systems, which could lead to harm to persons.

*Intent 2.* To direct Code users to a source of information commonly used for defining interior environmental loads.

---

**Provision: 5.2.1.3.(1)**

---

**Objective**

OH3

**Attributions**

[F56-OH3.1] Applies to sound transmission calculations.

**Intent(s)**

*Intent 1.* To limit the probability of the incorrect calculation of sound transmission, which could lead to the inadequate performance of components and assemblies of environmental separators under expected environmental loads, which could lead to occupants being exposed to excessive levels of airborne noise, which could lead to negative effects on the psychological well-being of persons.

---

**Objective**

OH1

**Attributions**

[F61, F51, F63, F55-OH1.1, OH1.2] [F51, F61-OH1.3] Applies to heat, air and moisture transfer calculations.

**Intent(s)**

*Intent 1.* To limit the probability of the incorrect calculation of heat, air and moisture transfers, which could lead to the inadequate performance or premature failure of components and assemblies of environmental separators under expected environmental or structural loads, which could lead to:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress, or
- moisture ingress from the ground.

---

## **Intent Statements: NBC 2010**

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting,
- deterioration, which could lead to further compromised integrity of environmental separators, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Objective**

OS2

### **Attributions**

[F61, F51, F63-OS2.3] Applies to heat, air and moisture transfer calculations.

### **Intent(s)**

*Intent 1.* To limit the probability of the incorrect calculation of heat, air and moisture transfers, which could lead to the inadequate performance or premature failure of components and assemblies of environmental separators under expected environmental or structural loads, which could lead to:

- condensation,
- precipitation ingress, or
- moisture ingress from the ground.

This is to limit the probability of:

- deterioration, which could lead to compromised structural integrity of the separators or of elements supported by the separators, and
- the freezing of soils on which foundations bear, which could lead to the displacement of structural elements.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

### **Provision: 5.2.1.3.(2)**

### **Intent(s)**

*Intent 1.* To clarify the parameters to include in determining soil temperature for the heat transfer calculations needed to determine conformance with Article 5.3.1.2.

---

### **Provision: 5.2.1.3.(3)**

### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 4.1.7., which identifies the acceptable method for calculating wind loads on cladding components and assemblies and whose Intent Statements identify the direct consequences of non-compliance with the objectives of Structural Safety, Structural Sufficiency of the Building and Vibration, and Deflection Limitation.

---

**Intent(s)**

*Intent 1.* To expand the application of Subsection 4.1.7. to include the calculation of structural wind loads on components and assemblies of environmental separators beyond cladding, with respect to the direct consequences of non-compliance with the objectives of Structural Safety, Structural Sufficiency of the Building, and Vibration and Deflection Limitation.

---

**Objective**

OH1

**Attributions**

[F61, F63, F55-OH1.1, OH1.2] [F61, F55-OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability of the incorrect calculation of wind loads, which could lead to the inadequate performance or premature failure of components and assemblies of environmental separators under expected wind loads, which could lead to:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress, or
- moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting,
- deterioration, which could lead to further compromised integrity of environmental separators, or
- pollutant ingress, including soil gas, combustion products from parking garages, and particulates.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS1

**Attributions**

[F20-OS1.4] Applies where required life safety systems are incorporated in environmental separators.

**Intent(s)**

*Intent 1.* Where required life safety systems are incorporated in environmental separators, to limit the probability of the incorrect calculation of wind loads, which could lead to the inadequate performance or premature failure of components and assemblies of environmental separators under expected wind loads.

This is to limit the probability of compromised operation of temperature-sensitive or moisture-sensitive life safety systems, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1]

### **Intent(s)**

*Intent 1.* To limit the probability of the incorrect calculation of wind loads, which could lead to the inadequate performance or premature failure of components and assemblies of environmental separators under expected wind loads, which could lead to:

- condensation, or
- precipitation ingress.

This is to limit the probability of deterioration, which could lead to compromised structural integrity of the separators or of elements supported by the separators, which could lead to structural failure, which could lead to harm to persons.

---

### **Provision: 5.2.2.1.(1)**

---

### **Objective**

OS2

### **Attributions**

[F20-OS2.1] [F21, F22-OS2.3, OS2.4]

### **Intent(s)**

*Intent 1.* To limit the probability that incorrect loads will be used in the structural design of environmental separators, which could lead to an inadequate resistance to expected structural loads on required environmental separation elements, which could lead to:

- vibration and deflection, or
- damage and deterioration.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

### **Intent(s)**

*Intent 1.* To expand the application of Part 4 to the determination of structural loads that are strict enough not to cause any adverse effects on the performance of environmental separators.

*Intent 2.* To direct Code users to applicable requirements in Part 4, which apply in any case for environmental separation elements identified in that Part and for immediate structural safety implications.

---

### **Objective**

OH1

### **Attributions**

[F20, F21, F22-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that incorrect loads will be used in the structural design of environmental separators, which could lead to an inadequate resistance to expected structural loads on required environmental separation elements, which could lead to damage and deterioration.

This is to limit the probability of the inadequate performance or premature failure of required environmental separation elements, which could lead to:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress,
- moisture ingress from the ground, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OH4

**Attributions**

[F20, F21, F22-OH4]

**Intent(s)**

*Intent 1.* To limit the probability that incorrect loads will be used in the structural design of environmental separators, which could lead to an inadequate resistance to expected structural loads on required environmental separation elements, which could lead to vibration and deflection, which could lead to negative effects on the psychological well-being of persons.

---

**Provision: 5.2.2.1.(2)**

---

**Intent(s)**

*Intent 1.* To clarify which loads are addressed by Sentence 5.2.2.1.(1).

*Intent 2.* [Clause 5.2.2.1.(2)(c)]: To limit the application of design for seismic effects to post-disaster buildings based on their intended functions.

---

**Provision: 5.2.2.1.(3)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1] [F21, F22-OS2.3, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability that expected loads, other than those listed in Sentences 5.2.2.1.(1) and 5.2.2.1.(2), will not be taken into account in the structural design of environmental separators, which could lead to an inadequate resistance to expected structural loads on required environmental separation elements, which could lead to:

---

## **Intent Statements: NBC 2010**

- vibration and deflection, or
- damage and deterioration.

This is to limit the probability of the structural failure of environmental separation elements, which could lead to harm to persons.

---

### **Objective**

OH1

### **Attributions**

[F20, F21, F22-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that expected loads, other than those listed in Sentences 5.2.2.1.(1) and 5.2.2.1.(2), will not be taken into account in the structural design of environmental separators, which could lead to an inadequate resistance to expected structural loads on required environmental separation elements, which could lead to damage and deterioration.

This is to limit the probability of the inadequate performance or premature failure of required environmental separation elements, which could lead to:

- air infiltration and exfiltration,
- condensation,
- precipitation ingress,
- moisture ingress from the ground, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to further compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Objective**

OH4

### **Attributions**

[F20, F21, F22-OH4]

### **Intent(s)**

*Intent 1.* To limit the probability that expected loads, other than those listed in Sentences 5.2.2.1.(1) and 5.2.2.1.(2), will not be taken into account in the structural design of environmental separators, which could lead to an inadequate resistance to expected structural loads on required environmental separation elements, which could lead to vibration and deflection, which could lead to negative effects on the psychological well-being of persons.

**Provision: 5.2.2.2.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Article 5.2.2.2.

**Provision: 5.2.2.2.(2)**

---

**Objective**

OS2

**Attributions**

[F20-OS2.1] [F22-OS2.3, OS2.4]

**Intent(s)**

*Intent 1.* To limit the probability of using inappropriate wind load assumptions, which could lead to the deflection, movement and deterioration of required environmental separation elements subject to wind load, which could lead to the failure of such elements, which could lead to the inadequate control of:

- precipitation ingress due to air pressure differences,
- condensation, or
- the ingress of airborne moisture from the ground.

This is to limit the probability of compromised structural integrity of the separators or of elements protected by the separators, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To expand the application of Article 4.1.7.1. to wind loads on elements identified in Sentences 5.1.4.1.(3) and 5.2.2.2.(1), with respect to the direct implications of non-compliance with the objectives of Structural Safety and Structural Sufficiency of the Building.

---

**Objective**

OH1

**Attributions**

[F20, F22-OH1.1, OH1.2, OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability of using inappropriate wind load assumptions, which could lead to the deflection, movement and deterioration of required environmental separation elements subject to wind load, which could lead to the failure of such elements, which could lead to the inadequate control of:

- the total heat loss or gain due to air mass transfer or conduction,
- air infiltration and exfiltration,
- airborne vapour transfer from the interior above ground and from the exterior below ground,
- precipitation ingress due to air pressure differences, or
- condensation.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity, or water accumulation,
- pollutant ingress, including soil gas, combustion products from parking garages, and particulates,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

---

## **Intent Statements: NBC 2010**

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

*Intent 2.* To expand the application of Article 4.1.7.1. to wind loads on elements identified in Sentences 5.1.4.1.(3) and 5.2.2.2.(1), with respect to the direct implications of non-compliance with the objectives of Structural Safety and Structural Sufficiency of the Building.

5.4.1.1.(1)(a), 5.4.1.1.(1)(b), 5.4.1.1.(1)(c), 5.4.1.1.(1)(e) [F40, F55-OH1.1]

5.4.1.1.(1)(c) [F55, F61, F63-OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability of the inadequate control of air leakage or inadequate venting, which could lead to:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity, or water accumulation,
- pollutant ingress, including soil gas, combustion products from parking garages, and particulates,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

5.4.1.1.(1)(c) and 5.4.1.1.(1)(d) [F61, F62, F63, F55-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of the inadequate control of air leakage or inadequate venting, which could lead to deterioration, which could lead to compromised structural integrity of environmental separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability of the inadequate control of air leakage or inadequate venting, which could lead to uncontrolled heat loss due to air mass transfer, which could lead to ice damming, which could lead to damage to environmental separators or to elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

5.4.1.1.(1)(d) [F55, F62-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability of the inadequate control of air leakage or inadequate venting, which could lead to the creation of ice dams, which could lead to:

---

## **Intent Statements: NBC 2010**

- damage to the roof, which could lead to building components falling from the roof, or
- larger pieces of ice or snow falling from the roof.

This is to limit the probability of harm to persons.

---

### **Objective**

OS1

### **Attributions**

5.4.1.1.(1)(f) [F55, F62-OS1.4] Applies where required life safety systems are incorporated in environmental separators.

### **Intent(s)**

*Intent 1.* Where required life safety systems are incorporated in environmental separators, to limit the probability of the inadequate control of air leakage or inadequate venting, which could lead to the freezing of pipes, which could lead to compromised operation of temperature-sensitive or moisture-sensitive life safety systems, which could lead to harm to persons.

---

## **Provision: 5.4.1.1.(2)**

---

### **Objective**

OH1

### **Attributions**

[F40-OH1.1] [F52, F54-OH1.2] [F51, F55, F61, F63-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability of the inadequate control of:

- heat loss or gain due to air mass transfer,
- air infiltration and exfiltration,
- airborne vapour transfer from the interior above ground and from the exterior below ground,
- precipitation ingress due to air pressure differences, or
- condensation.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity, or water accumulation,
- pollutant ingress, including soil gas, combustion products from parking garages, and particulates,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

[F61, F63-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of the inadequate control of:

- precipitation ingress due to air pressure differences,
- condensation, or
- the ingress of airborne moisture from the ground.

This is to limit the probability of deterioration, which could lead to compromised structural integrity of environmental separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

[F51, F55-OS1.4] Applies where required life safety systems are incorporated in environmental separators.

**Intent(s)**

*Intent 1.* Where required life safety systems are incorporated in environmental separators, to limit the probability of the inadequate control of heat loss or gain due to air mass transfer, which could lead to compromised operation of temperature-sensitive or moisture-sensitive life safety systems, which could lead to harm to persons.

---

**Provision: 5.4.1.1.(3)**

---

**Intent(s)**

*Intent 1.* To exempt situations from the application of Section 5.4., where it can be shown that the lack of control of air leakage will not adversely affect health, safety, the intended use of the building or the operation of building services.

---

**Provision: 5.4.1.2.(1)**

---

**Objective**

OH1

**Attributions**

[F55-OH1.1, OH1.2, OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability that the airtightness of the installed materials will be inadequate for the control of:

- heat loss or gain due to air mass transfer,
- air infiltration and exfiltration,
- airborne vapour transfer from the interior above ground and from the exterior below ground,
- precipitation ingress due to air pressure differences, or
- the condensation of moisture from interior spaces on interior surfaces or within assemblies.

---

## **Intent Statements: NBC 2010**

This is to limit the probability of:

- pollutant ingress, including soil gas, combustion products from parking garages, and particulates,
- the inadequate control of temperatures of interior spaces, drafts, indoor relative humidity, or
- water accumulation.

This is to limit the probability of:

- the generation of pollutants from biological growth, or from materials that become unstable on wetting, or
- deterioration, further compromising the integrity of the separator.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, or
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Objective**

OS2

### **Attributions**

[F55-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the airtightness of the installed materials will be inadequate for the control of:

- precipitation ingress due to air pressure differences,
- the condensation of moisture from interior spaces on interior surfaces or within assemblies, or
- the ingress of airborne moisture from the ground into or through assemblies.

This is to limit the probability of deterioration, which could lead to compromised structural integrity of environmental separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OS1

### **Attributions**

[F55-OS1.4] Applies where required life safety systems are incorporated in environmental separators.

### **Intent(s)**

*Intent 1.* Where required life safety systems are incorporated in environmental separators, to limit the probability that installed materials will not be sufficiently airtight, which could lead to an inadequate control of heat loss due to air mass transfer, which could lead to freezing, which could lead to compromised operation of temperature-sensitive life safety systems, which could lead to harm to persons.

---

## **Provision: 5.4.1.2.(2)**

### **Intent(s)**

*Intent 1.* To exempt situations from the application of Sentence 5.4.1.2.(1), where it can be shown that the installation of material with an air leakage characteristic greater than  $0.02 \text{ L}/(\text{s} \cdot \text{m}^2)$  measured at an

air pressure difference of 75 Pa, will not adversely affect health, safety, the intended use of the building or the operation of building services.

**Provision: 5.4.1.2.(3)**

---

**Objective**

OH1

**Attributions**

[F61, F51, F63, F55-OH1.1, OH1.2] [F55, F61-OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability of the inadequate control of:

- total heat loss or gain due to air mass transfer,
- air infiltration and exfiltration,
- airborne vapour transfer from the interior above ground and from the exterior below ground,
- precipitation ingress due to air pressure differences, or
- condensation.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity, or water accumulation,
- pollutant ingress, including soil gas, combustion products from parking garages, and particulates,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

[F61, F63-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of the inadequate control of:

- precipitation ingress due to air pressure differences,
- condensation, or
- the ingress of airborne moisture from the ground.

This is to limit the probability of deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS1

### **Attributions**

[F61, F51, F63-OS1.4] Applies where required life safety systems are incorporated in environmental separators.

### **Intent(s)**

*Intent 1.* Where required life safety systems are incorporated in environmental separators, to limit the probability of the inadequate control of:

- total heat loss or gain due to air mass transfer,
- airborne vapour transfer from the interior above ground and from the exterior below ground, or
- precipitation ingress due to air pressure differences.

This is to limit the probability of compromised operation of temperature-sensitive or moisture-sensitive life safety systems, which could lead to harm to persons.

---

### **Provision: 5.4.1.2.(4)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to the general requirements in Article 5.1.4.1. and Subsection 5.2.2., which also apply to air barrier systems subject to air pressure loads.

---

### **Provision: 5.5.1.1.(1)**

---

### **Objective**

OH1

### **Attributions**

[F63-OH1.1, OH1.2]

### **Intent(s)**

*Intent 1.* To limit the probability of

- the inadequate control of vapour diffusion (except the diffusion of moisture from the ground) through environmental separators under expected environmental loads, or
- the inadequate venting of vapour to the exterior.

This is to limit the probability of the accumulation of condensation, which could lead to:

- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces, and
- the inadequate thermal comfort of persons.

This is to limit the probability of harm to persons.

---

### **Objective**

OS2

### **Attributions**

[F63-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of:

- the inadequate control of vapour diffusion (except the diffusion of moisture from the ground) through environmental separators under expected environmental loads, or
- the inadequate venting of vapour to the exterior.

This is to limit the probability of the accumulation of condensation, which could lead to deterioration, which could lead to compromised structural integrity of environmental separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

**Provision: 5.5.1.1.(2)**

---

**Objective**

OH1

**Attributions**

[F63-OH1.1, OH1.2]

**Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to vapour diffusion (except the diffusion of moisture from the ground) through environmental separators under expected environmental loads, which could lead to condensation.

This is to limit the probability of:

- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces, and
- the inadequate thermal comfort of persons.

This is to limit the probability of harm to persons.

**Objective**

OS2

**Attributions**

[F63-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to vapour diffusion (except the diffusion of moisture from the ground) through environmental separators under expected environmental loads, which could lead to condensation, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

**Provision: 5.5.1.1.(3)**

---

**Intent(s)**

*Intent 1.* To exempt situations from the application of Section 5.5., where a lack of control of vapour diffusion will not adversely affect health, safety, the intended use of the building or the operation of building services.

---

[F60-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of excessive moisture loading on assemblies, which could lead to prolonged exposure of building materials to moisture, which could lead to damage to and deterioration of building elements, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability of soil erosion, which could lead to compromised integrity of soils supporting the building, which could lead to structural failure, which could lead to harm to persons.

**Provision: 5.7.1.1.(2)**

---

**Objective**

OH1

**Attributions**

[F61, F80-OH1.1, OH1.2, OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability of excessive moisture loading on foundation walls, which could lead to:

- surface water ingress, or
- prolonged exposure of building materials to moisture, which could lead to damage to moisture-susceptible materials.

This is to limit the probability of:

---

## **Intent Statements: NBC 2010**

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Objective**

OS2

### **Attributions**

[F61, F80-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability of excessive moisture loading on foundation walls, which could lead to prolonged exposure of building materials to moisture, which could lead to damage to moisture-susceptible building elements, which could lead to structural failure, which could lead to harm to persons.

---

## **Provision: 5.7.1.1.(3)**

---

### **Objective**

OH1

### **Attributions**

[F60-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To exempt from the application of Sentence 5.7.1.1.(1) and Clause 5.7.1.1.(2)(a) buildings that are specifically designed to accommodate the accumulation of water at the building or the ingress of water.

*Intent 2.* To limit the probability of damage to moisture-susceptible materials, which could lead to:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Objective**

OS2

### **Attributions**

[F60-OS2.3]

### **Intent(s)**

**Intent 1.** To exempt from the application of Sentence 5.7.1.1.(1) and Clause 5.7.1.1.(2)(a) buildings that are specifically designed to accommodate the accumulation of water at the building or the ingress of water.

**Intent 2.** To limit the probability of damage to moisture-susceptible materials, which could lead to structural failure, which could lead to harm to persons.

---

**Provision: 5.8.1.1.(1)**

---

**Objective**

OH1

**Attributions**

[F60-OH1.1, OH1.2, OH1.3] Applies to portion of Code text: "... the bottom of every exterior *foundation* wall and every floor-on-ground shall be provided with drainage."

**Intent(s)**

**Intent 1.** To limit the probability of excessive moisture loading on below-ground assemblies, which could lead to moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

[F60-OS2.3, OS2.2] Applies to portion of Code text: "... the bottom of every exterior *foundation* wall and every floor-on-ground shall be provided with drainage."

**Intent(s)**

**Intent 1.** To limit the probability of excessive moisture loading on below-ground assemblies, which could lead to moisture ingress from the ground, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators.

**Intent 2.** Where floors are supported on ground, to limit the probability of reducing the soil-bearing capacity due to saturation, which could lead to structural failure, which could lead to harm to persons.

---

**Intent(s)**

**Intent 1.** To exempt certain situations from the requirements for drainage in the latter part of Sentence 5.8.1.1.(1), on the basis that drainage will be ineffective or the native soil provides effective drainage.

---

## **Intent Statements: NBC 2010**

### **Provision: 5.8.1.2.(1)**

---

#### **Objective**

OH1

#### **Attributions**

[F60-OH1.1, OH1.2, OH1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability of:

- inadequate drainage of below-ground assemblies, or
- excessive moisture loading on the assemblies.

This is to limit the probability of moisture ingress from the ground, which could lead to:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

#### **Objective**

OS2

#### **Attributions**

[F60-OS2.3] [F21-OS2.2]

#### **Intent(s)**

*Intent 1.* To limit the probability of:

- inadequate drainage of below-ground assemblies, or
- excessive moisture loading on the assemblies.

This is to limit the probability of moisture ingress from the ground, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators.

*Intent 2.* For floors supported on ground, to limit the probability of reducing the soil-bearing capacity due to saturation, which could lead to structural failure, which could lead to harm to persons.

### **Provision: 5.8.2.1.(1)**

---

#### **Objective**

OH1

#### **Attributions**

[F61-OH1.1, OH1.2, OH1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability of moisture ingress from the ground, which could lead to:

- the inadequate control of relative humidity or water accumulation,

- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

[F61-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of moisture ingress from the ground, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

---

**Provision: 5.8.2.1.(2)**

---

**Intent(s)**

*Intent 1.* To exempt certain situations from the application of Subsection 5.8.2., on the basis that moisture transfer from the ground into, or through, the environmental separators will not adversely affect health, safety, the intended use of the building or the operation of building services.

---

**Provision: 5.8.2.2.(1)**

---

**Intent(s)**

*Intent 1.* To exempt certain situations from the application of Article 5.8.2.2., on the basis that a lesser resistance to moisture transfer from the ground into or through assemblies will not adversely affect health, safety, the intended use of the building or the operation of building services.

---

**Provision: 5.8.2.2.(2)**

---

**Objective**

OS2

**Attributions**

[F61-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of materials not being capable of bridging joints, which could lead to discontinuity of protection at joints, which could lead to moisture ingress from the ground, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OH1

### **Attributions**

[F61-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability of materials not being capable of bridging joints, which could lead to discontinuity of protection at joints, which could lead to moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Provision: 5.8.2.2.(3)**

---

### **Objective**

OS2

### **Attributions**

[F61-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability of inadequate detailing and sealing of joints, which could lead to discontinuity of protection at joints, which could lead to moisture ingress from the ground, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

---

### **Objective**

OH1

### **Attributions**

[F61-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability of inadequate detailing and sealing of joints, which could lead to discontinuity of protection at joints, which could lead to moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Provision: 5.8.2.2.(4)**

**Objective**

OH1

**Attributions**

[F61-OH1.1, OH1.2, OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to moisture transfer in relation to the moisture load, which could lead to moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

[F61-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to moisture transfer in relation to the moisture load, which could lead to moisture ingress from the ground, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

---

**Provision: 5.8.2.2.(5)**

**Intent(s)**

*Intent 1.* To direct Code users to Section 4.2. for the accepted method for determining hydrostatic pressure with respect to the direct consequences of non-compliance with the objectives of Structural Safety and Structural Sufficiency of the Building.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OH1

### **Attributions**

[F61-OH1.1] [F20, F61-OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to hydrostatic pressures, which could lead to moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Objective**

OS2

### **Attributions**

[F61-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability of an inadequate resistance to hydrostatic pressures, which could lead to moisture ingress from the ground, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

---

## **Provision: 5.8.2.2.(6)**

---

### **Objective**

OH1

### **Attributions**

[F61-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the performance of the installed material, with respect to resistance to moisture transfer, will fall significantly below what is needed to control moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

[F61-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability that the performance of the installed material, with respect to resistance to moisture transfer, will fall significantly below what is needed to control moisture ingress from the ground, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

**Provision: 5.8.2.2.(7)**

---

**Intent(s)**

*Intent 1.* [Clause (a)] To exempt certain designs from the application of the waterproofing requirements of Sentences 5.8.2.2.(2) to 5.8.2.2.(5), on the basis that the designs employ defined alternate methods of controlling the potential for moisture ingress.

*Intent 2.* [Clause (b)] To expand the application of Sentence 5.8.2.2.(2) to allow the use of dampproofing materials for designs that employ defined alternate methods of controlling the potential for moisture ingress.

---

**Objective**

OH1

**Attributions**

5.8.2.2.(7)(b) [F61-OH1.1, OH1.2, OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability that the performance of the installed dampproofing material, with respect to resistance to moisture transfer, will fall significantly below expectations, which could lead to moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS2

### **Attributions**

5.8.2.2.(7)(b) [F61-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the performance of the installed dampproofing material, with respect to resistance to moisture transfer, will fall significantly below expectations, which could lead to moisture ingress from the ground, which could lead to deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators.

This is to limit the probability of structural failure, which could lead to harm to persons.

---

### **Provision: 5.8.2.3.(1)**

---

### **Objective**

OH1

### **Attributions**

[F61-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the performance of the installed material, with respect to resistance to moisture transfer, will fall significantly below expectations, which could lead to moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Objective**

OS2

### **Attributions**

[F61-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the performance of the installed material, with respect to resistance to moisture transfer, will fall significantly below expectations, which could lead to moisture ingress from the ground.

This is to limit the probability of deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

**Provision: 5.8.2.3.(2)**

---

**Objective**

OH1

**Attributions**

[F61-OH1.1, OH1.2, OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability that the performance of the installed material, with respect to resistance to moisture transfer, will fall significantly below expectations, which could lead to moisture ingress from the ground.

This is to limit the probability of:

- the inadequate control of relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of environmental separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

[F61-OS2.3]

**Intent(s)**

*Intent 1.* To limit the probability that the performance of the installed material, with respect to resistance to moisture transfer, will fall significantly below expectations, which could lead to moisture ingress from the ground.

This is to limit the probability of deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

**Provision: 5.9.1.1.(1)**

---

**Objective**

OH3

**Attributions**

[F56-OH3.1]

**Intent(s)**

*Intent 1.* To limit the probability that improper methods will be used to determine the airborne sound transmission characteristics of assemblies and components, which could lead to the misrepresentation of sound transmission class ratings, which could lead to occupants being exposed to excessive levels of airborne noise from other parts of the building, which could lead to negative effects on the psychological well-being of persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 5.9.1.2.(1)**

---

#### **Objective**

OH3

#### **Attributions**

[F56-OH3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that excessively high sound levels will be transmitted into a dwelling unit from other parts of the building, which could lead to persons being exposed to excessively high sound levels in the dwelling unit, which could lead to negative effects on the psychological well-being of persons.

### **Provision: 5.9.1.2.(2)**

---

#### **Objective**

OH3

#### **Attributions**

[F56-OH3.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that excessively high sound levels will be transmitted into a dwelling unit from an elevator hoistway or a refuse chute, which could lead to persons being exposed to excessively high sound levels in the dwelling unit, which could lead to negative effects on the psychological well-being of persons.

*Intent 2.* To supersede the requirement of Sentence 5.9.1.2.(1) and require a rating of not less than 55, in cases where dwelling units are adjacent to elevator hoistways and refuse chutes, on the basis that hoistways and chutes are expected to generate relatively high noise levels.

### **Provision: 5.10.1.1.(1)**

---

#### **Objective**

OH1

#### **Attributions**

[F51, F54, F55, F61, F63, F80-OH1.1, OH1.2] [F41, F55-OH1.1] [F55, F61, F80-OH1.3]

#### **Intent(s)**

*Intent 1.* To limit the probability that the performance of materials and components and their installation will fall significantly below expectations, with respect to:

- their resistance to:
  - condensation,
  - excessive heat transfer,
  - precipitation ingress,
  - the ingress of moisture from the ground,
  - the ingress of water from the surface, or
  - air infiltration and exfiltration, or
- the emission of gases from improperly constituted or applied material (CAN/ULC-S705.2).

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, drafts, relative humidity or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting,
- deterioration, which could lead to further compromised integrity of environmental separators, or
- pollutant ingress, including soil gas, combustion products from parking garages, or particulates.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS2

**Attributions**

[F20-OS2.1] [F51, F61, F63, F80-OS2.3] [F51-OS2.5]

**Intent(s)**

*Intent 1.* To limit the probability that the performance of materials and components and their installation will fall significantly below expectations, with respect to the structural integrity, which could lead to structural failure, which could lead to harm to persons.

*Intent 2.* To limit the probability that the performance of materials and components and their installation will fall significantly below expectations, with respect to:

- their resistance to:
  - condensation
  - the ingress of precipitation, water or moisture from the exterior or from the ground,
  - excessive heat loss or gain, or
  - premature deterioration, or
- metallic components of environmental separators being corroded by chemicals in the cellulose (CAN/ULC-S703).

This is to limit the probability of damage to or deterioration of environmental separation elements, which could lead to compromised structural integrity of such elements, which could lead to structural failure, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

[F80, F61, F63-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that the performance of materials and components and their installation will fall significantly below expectations, with respect to their resistance to premature deterioration and damage due to moisture.

For floor assemblies, this is to limit the probability of persons losing their balance, tripping or falling, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OH4

### **Attributions**

[F80, F61, F63-OH4] Applies to floor assemblies.

### **Intent(s)**

*Intent 1.* To limit the probability that the performance of materials and components and their installation will fall significantly below expectations, with respect to their resistance to premature deterioration and damage of moisture-susceptible materials and components.

For floor assemblies, this is to limit the probability of excessive movement, deflection or vibration, which could lead to negative effects on the psychological well-being of persons.

---

### **Objective**

OS1

### **Attributions**

5.10.1.1.(1)(a) [F61, F63-OS1.4] Applies where required life safety systems are incorporated in environmental separators.

### **Intent(s)**

*Intent 1.* To limit the probability:

- that the thermal performance of materials and components will fall significantly below expectations, which could lead to the inadequate control of heat transfer through environmental separators under expected environmental loads, and
- with respect to CAN/ULC-S703, that metallic components of environmental separators will be corroded by chemicals in the cellulose.

Where required life safety systems are incorporated in environmental separators, this is to limit the probability of compromised operation of temperature-sensitive or moisture-sensitive life safety systems, which could lead to harm to persons.

---

### **Provision: 5.10.1.1.(2)**

---

### **Intent(s)**

*Intent 1.* To exempt materials, components and assemblies installed to resist the transfer of heat from the requirements regarding flame-spread ratings contained in the thermal insulation standards referenced in Table 5.10.1.1., on the basis that the rating is not necessary for the adequate thermal performance of such materials, components and assemblies.

*Intent 2.* To direct Code users to Part 3 for requirements regarding flame-spread ratings, which may apply to the materials, components or assemblies in question.

---

### **Provision: 5.10.2.1.(1)**

---

### **Intent(s)**

*Intent 1.* To state the application of Subsection 5.10.2.

---

### **Provision: 5.10.2.1.(2)**

---

**Intent(s)**

*Intent 1.* To clarify that use of the term “skylight” in Subsection 5.10.2. is intended to include the other commonly used terms “roof windows” and “unit skylights” as well as components known as “tubular daylighting devices.”

**Provision: 5.10.2.1.(3)**

---

**Intent(s)**

*Intent 1.* To exempt certain wired glass assemblies from the application of Subsection 5.10.2., on the basis that wired glass assemblies providing the required fire resistance may not necessarily meet the watertightness criteria and in recognition of the fact that fire resistance is a more important property than watertightness.

**Provision: 5.10.2.2.(1)**

---

**Objective**

OH1

**Attributions**

[F20, F55, F61, F63-OH1.1, OH1.3] [F20, F55, F61, F63, F81-OH1.2]

**Intent(s)**

*Intent 1.* To limit the probability that the performance of windows, doors and skylights will fall significantly below expectations with respect to:

- resistance to wind and snow loads,
- control of air leakage,
- protection against precipitation ingress,
- resistance to the ingress of insects and vermin, and
- ease of operation.

This is to limit the probability of:

- structural insufficiency of windows, doors and skylights,
- excessive air leakage, which could lead to excessive heat transfer or condensation,
- the ingress of water,
- the ingress of insects and vermin, or
- inoperability or excessive difficulty in operating openable windows, doors and skylights.

This is to limit the probability of:

- the inadequate control of temperatures of interior spaces, relative humidity, drafts, or water accumulation,
- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of exterior wall assemblies.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS2

### **Attributions**

[F20, F55, F61-OS2.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the performance of windows, doors and skylights will fall significantly below expectations with respect to:

- resistance to wind and snow loads,
- control of air leakage, which could lead to excessive heat transfer or condensation, and
- protection against precipitation ingress.

This is to limit the probability of damage to or deflection of windows, doors and skylights or their components, which could lead to:

- the compromised structural integrity of windows, doors and skylights and adjacent exterior wall assemblies, or
- the ingress of water or condensation, which could lead to deterioration, which could lead to compromised structural integrity of windows, doors and skylights and adjacent exterior wall assemblies.

This is to limit the probability of harm to persons.

---

### **Objective**

OP2

### **Attributions**

[F20, F55, F61-OP2.3]

### **Intent(s)**

*Intent 1.* To limit the probability that the performance of windows, doors and skylights will fall significantly below expectations with respect to:

- resistance to wind and snow loads,
- control of air leakage, which could lead to excessive heat transfer or condensation, and
- protection against precipitation ingress.

This is to limit the probability of damage to or deflection of windows, doors and skylights or their components, which could lead to:

- the compromised structural integrity of windows, doors and skylights and adjacent exterior wall assemblies, or
- the ingress of water or condensation, which could lead to deterioration, which could lead to compromised structural integrity of windows, doors and skylights and adjacent exterior wall assemblies.

This is to limit the probability of damage to the building, which could impede the intended use and occupancy of the building.

---

## **Provision: 5.10.2.2.(2)**

### **Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To clarify that the selection of acceptable windows, doors and skylights is based on the determination of specified design test pressures (performance grades) according to the Canadian Supplement (Clause 5.10.2.2.(1)(b)) for each location in which windows, doors and skylights are installed.

**Provision: 5.10.2.2.(3)**

---

### **Intent(s)**

*Intent 1.* To clarify that the performance grades of windows, doors and skylights are based on testing of the product in accordance with the Harmonized Standard referenced in Clause 5.10.2.2.(1)(a).

**Provision: 5.10.2.3.(1)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to the two applicable sets of requirements in Part 5 for the design and construction of windows, doors and skylights.

**Provision: 5.10.2.4.(1)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to Section 5.3., which contains heat transfer performance requirements for windows, doors, and skylights.

**Provision: 5.10.2.4.(2)**

---

### **Objective**

OH1

### **Attributions**

[F63-OH1.1, OH1.2]

### **Intent(s)**

*Intent 1.* To limit the probability of the inadequate control of heat transfer through metal-framed glazing assemblies under expected environmental loads, which could lead to condensation.

This is to limit the probability of:

- the generation of pollutants from biological growth or from materials that become unstable on wetting, or
- deterioration, which could lead to compromised integrity of the separators.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

*Intent 2.* To limit the probability of the inadequate control of heat transfer through metal-framed glazing assemblies under expected environmental loads, which could lead to excessive heat loss or gain, which could lead to the inadequate control of temperatures of interior spaces, which could lead to inadequate thermal comfort of persons, which could lead to harm to persons.

---

### **Objective**

OS2

### **Attributions**

[F63-OS2.3]

---

## **Intent Statements: NBC 2010**

### **Intent(s)**

*Intent 1.* To limit the probability of the inadequate control of heat transfer through metal-framed glazing assemblies under expected environmental loads, which could lead to condensation.

This is to limit the probability of deterioration, which could lead to compromised structural integrity of the separators or of elements supported or protected by the separators, which could lead to structural failure, which could lead to harm to persons.

### **Provision: 5.10.2.4.(3)**

---

### **Intent(s)**

*Intent 1.* To exempt certain glazed assemblies from the requirement for a thermal break stated in Sentence 5.10.2.4.(2), on the basis that:

- the assemblies are installed as storm windows and doors, because in this application they act as a secondary protection against heat transfer, or
- the assemblies are required to have a fire-protection rating and it is recognized that fire is a more serious hazard than inadequate thermal performance and that rated glazed assemblies with thermal breaks are unlikely to be available.

### **Provision: 6.1.1.1.(1)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 1.3.3. where the application of Part 6 is stated.

### **Provision: 6.1.1.2.(1)**

---

### **Intent(s)**

*Intent 1.* To state the application of Part 6.

### **Provision: 6.1.2.1.(1)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to Article 1.4.1.2., which contains the definitions of italicized words.

### **Provision: 6.1.3.1.(1)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 2.2.6., which contains the requirements for heating, ventilating and air-conditioning drawings and specifications.

### **Provision: 6.2.1.1.(1)**

---

### **Objective**

OP1

### **Attributions**

6.2.1.1.(1)(a) to 6.2.1.1.(1)(e) [F31, F51-OP1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the inadequate design, construction or operation of heating systems will lead to performance that is significantly below expectations, which could lead to fire, which could lead to damage to the building.

---

**Objective**

OH1

**Attributions**

6.2.1.1.(1)(a) to 6.2.1.1.(1)(c) and 6.2.1.1.(1)(e) to 6.2.1.1.(1)(i) [F40, F50, F51, F52, F54, F63-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the inadequate design, construction or operation of heating or ventilating systems will lead to performance that is significantly below expectations, which could lead to:

- an inability to maintain adequate indoor air temperature or to control relative humidity, which could lead to condensation, which could lead to the growth of mould and mildew, or
- the inadequate control of airborne pollutants.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Objective**

OH1

**Attributions**

6.2.1.1.(1)(a), 6.2.1.1.(1)(b), 6.2.1.1.(1)(c), 6.2.1.1.(1)(e), 6.2.1.1.(1)(f), 6.2.1.1.(1)(g), 6.2.1.1.(1)(h) [F50, F51, F52, F54, F63-OH1.2, OH1.3]

**Intent(s)**

*Intent 1.* To limit the probability that the inadequate design, construction or operation of heating, ventilating or air-conditioning systems will lead to performance that is significantly below expectations, which could lead to the inadequate control of:

- relative humidity or indoor air temperatures,
- surface temperatures,
- air velocity, or
- condensation.

This is to limit the probability of:

- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Objective**

OS3

**Attributions**

[F31, F50, F51, F52, F54, F63-OS3.2, OS3.4]

**Intent(s)**

*Intent 1.* To limit the probability that the performance of heating, ventilating and air-conditioning systems will fall significantly below expectations, which could lead to unsafe conditions [e.g. excessively hot supply air or surfaces, inadequate venting or the release of toxic gases in buildings], which could lead to harm to persons.

---

### **Objective**

OS1

### **Attributions**

6.2.1.1.(1)(d) [F01-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the inadequate design, construction or operation of heating systems will lead to performance that is significantly below expectations, which could lead to fire, which could lead to harm to persons.

---

### **Provision: 6.2.1.2.(1)**

### **Intent(s)**

*Intent 1.* To direct Code users to Subsection 3.6.5., which contains requirements for fire safety for air duct and plenum systems serving heating, ventilating and air-conditioning systems [see Sentence 6.2.1.2.(2)].

*Intent 2.* To modify the application of Subsection 3.6.5. to include all Part 9 situations that are required to comply with Part 6.

---

### **Provision: 6.2.1.2.(2)**

### **Intent(s)**

*Intent 1.* To clarify the application of Sentence 6.2.1.2.(1) with respect to fire safety concerns involving heating, ventilating and air-conditioning equipment, and duct and pipe materials.

---

### **Provision: 6.2.1.3.(1)**

### **Objective**

OS3

### **Attributions**

[F23-OS3.1]

### **Intent(s)**

*Intent 1.* To limit the probability that an inadequate design will lead to an inability to accommodate relative structural movement [caused by, for example, expected deflection of structural members, vibration or impact, or earthquake loads], which could lead to toppling of equipment, which could lead to harm to persons.

---

### **Objective**

OH1

### **Attributions**

[F51, F63, F50-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that an inadequate design will lead to an inability to accommodate relative structural movement [caused by, for example, expected deflection of structural members, vibration or

impact, or earthquake loads], which could lead to damage to, or malfunction of, mechanical systems or equipment installed in buildings, which could lead to the inadequate control of:

- relative humidity or indoor air temperatures,
- surface temperatures,
- air velocity, or
- condensation.

This is to limit the probability of:

- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F50, F31, F63, F51, F54, F52-OP1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the performance of ventilation systems will fall significantly below expectations, which could lead to fire, which could lead to damage to the building.

**Provision: 6.2.2.1.(2)**

---

**Objective**

OH1

**Attributions**

[F50-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that an inadequate supply of outdoor air will lead to inadequate ventilation, which could lead to the inadequate control of relative humidity or airborne pollutants, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

**Provision: 6.2.2.1.(3)**

---

**Intent(s)**

*Intent 1.* To exempt self-contained mechanical ventilation systems serving only one dwelling unit from the application of Article 6.2.2.1., where they conform to Subsection 9.32.3.

**Provision: 6.2.2.2.(1)**

---

**Objective**

OH1

**Attributions**

[F50-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability of inadequate ventilation, which could lead to the inadequate control of relative humidity or airborne pollutants, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

**Provision: 6.2.2.2.(2)**

---

**Objective**

OH1

**Attributions**

[F50-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability of inadequate ventilation, which could lead to the inadequate control of relative humidity or airborne pollutants, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

*Intent 2.* To exempt buildings containing occupancies other than residential occupancies from the application of Sentence 6.2.2.1.(1), in cases where climatic conditions permit and engineering data demonstrates that natural ventilation will suffice.

---

## **Intent Statements: NBC 2010**

### **Provision: 6.2.2.3.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F50, F44-OS3.4]

#### **Intent(s)**

*Intent 1.* To limit the probability of inadequate ventilation, which could lead to excessive levels of carbon monoxide gas or nitrogen dioxide in storage garages, which could lead to the acute poisoning or asphyxiation of persons.

### **Provision: 6.2.2.3.(2)**

---

#### **Objective**

OS3

#### **Attributions**

[F44-OS3.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that a lack of appropriate devices to activate mechanical ventilation systems will lead to excessive levels of carbon monoxide or nitrogen dioxide, which could lead to the acute poisoning or asphyxiation of persons.

### **Provision: 6.2.2.3.(3)**

---

#### **Objective**

OS3

#### **Attributions**

[F44-OS3.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that a higher pressure in storage garages than in adjoining buildings will lead to the flow of contaminants into other occupied parts of the floor area or to adjacent buildings having a different occupancy, which could lead to harm to persons.

### **Provision: 6.2.2.3.(4)**

---

#### **Objective**

OS3

#### **Attributions**

[F50, F44-OS3.4]

#### **Intent(s)**

*Intent 1.* To modify the application of Sentences 6.2.2.3.(1) and 6.2.2.3.(2) so as to permit a reduction in ventilation requirements where the rate of carbon monoxide generation is lowered due to the movement of vehicles.

This is to limit the probability of inadequate ventilation, which could lead to an excessive accumulation of carbon monoxide gas in storage garages, which could lead to harm to persons.

**Provision: 6.2.2.3.(5)**

---

**Objective**

OH1

**Attributions**

[F50, F44-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that a neutral or negative pressure in ticket or attendant booths will lead to the entry of air contaminants that occur normally in storage garages, such as gasoline and exhaust vapours, into the booths, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

[F50, F44-OS3.4]

**Intent(s)**

*Intent 1.* To limit the probability that a negative pressure in ticket or attendant booths will lead to the entry of carbon monoxide into such booths, which could lead to harm to persons.

**Provision: 6.2.2.3.(6)**

---

**Intent(s)**

*Intent 1.* To exempt open-air storeys in storage garages, which are inherently well ventilated, from the requirement to provide mechanical ventilation as stated in Sentences 6.2.2.3.(1) to 6.2.2.3.(5).

**Provision: 6.2.2.4.(1)**

---

**Objective**

OH1

**Attributions**

[F40, F50-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that contaminants will not be removed from outside air that will be used as intake air in the ventilation system, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

**Provision: 6.2.2.5.(1)**

---

**Objective**

OS3

**Attributions**

[F44-OS3.4]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that the failure to remove hazardous air contaminants at their point of origin will lead to their accumulation in excessive concentrations, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

### **Objective**

OH1

### **Attributions**

[F44-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the failure to remove air contaminants at their point of origin will lead to their accumulation in excessive concentrations, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

### **Provision: 6.2.2.5.(2)**

---

### **Objective**

OH1

### **Attributions**

[F44-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the inappropriate design of heating, ventilating or air-conditioning systems will lead to the spread of contamination to other occupied parts of buildings, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

### **Provision: 6.2.2.5.(3)**

---

### **Objective**

OH1

### **Attributions**

[F52-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the inappropriate design of heating, ventilating and air-conditioning systems will lead to dampness, which could lead to the contamination of system components, which could lead to the growth of mould and mildew, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

### **Provision: 6.2.2.6.(1)**

---

### **Objective**

OP1

### **Attributions**

[F01-OP1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that inappropriate design, construction or installation will lead to performance that is significantly below expectations, which could lead to the creation of ignition sources as a result of the use or operation of heating, ventilating or air-conditioning equipment, which could lead

to the ignition of gases, dusts, vapours or residues, which could lead to fire or explosion, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

[F01-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that inappropriate design, construction or installation will lead to performance that is significantly below expectations, which could lead to:

- the accumulation of gases, dusts, vapours or residues in hazardous concentrations, which could be ignited in the presence of an ignition source, or
- the creation of ignition sources as a result of the use or operation of heating, ventilating or air-conditioning equipment, which could lead to the ignition of gases, dusts, vapours or residues.

This is to limit the probability of fire or explosion, which could lead to harm to persons.

---

**Provision: 6.2.2.6.(2)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that vapours will accumulate in sufficient quantity to form an ignitable mixture, which could lead to their ignition by a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F01-OP1.1]

**Intent(s)**

*Intent 1.* To limit the probability that vapours will accumulate in sufficient quantity to form an ignitable mixture, which could lead to their ignition by a nearby ignition source, which could lead to a fire or explosion, which could lead to damage to the building.

---

**Provision: 6.2.2.7.(1)**

---

**Objective**

OS1

**Attributions**

[F01, F44-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that inappropriate design, construction or installation will lead to performance that is significantly below expectations, which could lead to:

---

## **Intent Statements: NBC 2010**

- the accumulation of vapours or residues in hazardous concentrations or quantities which could be ignited in the presence of an ignition source,
- the ignition of nearby combustible materials as a result of the use and operation of cooking equipment and its ventilation system, or
- the spread of fire involving cooking equipment or its ventilating system.

This is to limit the probability of fire or explosion, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F01, F44-OP1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that inappropriate design, construction or installation will lead to performance that is significantly below expectations, which could lead to:

- the accumulation of vapours or residues in hazardous concentrations or quantities which could be ignited in the presence of an ignition source,
- the ignition of nearby combustible materials as a result of the use and operation of cooking equipment and its ventilation system, or
- the spread of fire involving cooking equipment or its ventilation system.

This is to limit the probability of fire or explosion, which could lead to damage to the building.

---

## **Provision: 6.2.2.7.(2)**

---

### **Objective**

OS1

### **Attributions**

[F02, F81-OS1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that special fire suppression systems will not suppress or control a fire, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

---

### **Objective**

OP1

### **Attributions**

[F02, F81-OP1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that special fire suppression systems will not suppress or control a fire, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building or facility.

**Provision: 6.2.2.8.(1)**

---

**Objective**

OH1

**Attributions**

[F61, F63, F41-OH1.1, OH1.3]

**Intent(s)**

*Intent 1.* In attic or roof spaces, to limit the probability that inadequate ventilation will lead to:

- the formation of ice dams, which could lead to the ingress into attic or roof assemblies of water backed up by ice dams, or
- the inadequate control of relative humidity, which could lead to condensation and moisture accumulation.

This is to limit the probability of harm to persons.

*Intent 2.* In crawl spaces, to limit the probability that inadequate ventilation will lead to condensation, moisture accumulation, or moisture ingress from the ground.

This is to limit the probability of the growth of mould and mildew, which could lead to:

- negative effects on the air quality of indoor spaces, and
- contact with moisture.

This is to limit the probability of harm to persons.

**Provision: 6.2.3.1.(1)**

---

**Intent(s)**

*Intent 1.* To state the application of Subsection 6.2.3.

*Intent 2.* To direct Code users to Part 9 for requirements regarding air duct distribution systems serving dwelling units.

**Provision: 6.2.3.2.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Part 3 for fire protection requirements for air ducts.

**Provision: 6.2.3.2.(2)**

---

**Objective**

OH1

**Attributions**

[F20, F80-OH1.1, OH1.2]

**Intent(s)**

*Intent 1.* To limit the probability that an inadequate resistance to moisture or corrosion will lead to condensation in ducts due to contact with wet soil or other sources of moisture, which could lead to the deterioration and collapse of ducts, which could lead to a reduction in airflow, which could lead to:

- the inadequate control of:
  - relative humidity or indoor air temperatures,
  - surface temperatures, or

---

## **Intent Statements: NBC 2010**

- air velocity, or
- an inability to maintain adequate indoor air temperatures, which could lead to the condensation of moisture from interior spaces on interior surfaces or within assemblies, which could lead to compromised integrity of environmental separators or of elements protected by such separators.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces, and
- the inadequate thermal comfort of persons.

This is to limit the probability of harm to persons.

---

### **Provision: 6.2.3.2.(3)**

#### **Objective**

OS3

#### **Attributions**

[F81, F44-OS3.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that the performance of ducts or fittings will fall significantly below expectations, which could lead to, in the case of ventilation systems, depressurization in buildings, which could lead to the spillage of carbon monoxide gas from fuel-fired appliances, which could lead to the acute poisoning or asphyxiation of persons.

---

#### **Objective**

OH1

#### **Attributions**

[F81-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the performance of ducts or fittings will fall significantly below expectations, which could lead to:

- a failure to deliver conditioned air to designated locations, which could lead to
  - an inability to maintain adequate indoor air temperatures or to control relative humidity, which could lead to condensation, which could lead to the growth of mould and mildew, or
  - the inadequate control of airborne pollutants, or
- in the case of ventilation systems, depressurization in buildings, which could lead to the spillage of combustion products from fuel-fired appliances.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

### **Provision: 6.2.3.2.(4)**

#### **Objective**

OH1

#### **Attributions**

[F20, F80-OH1.1, OH1.2]

#### **Intent(s)**

**Intent 1.** To limit the probability that an inadequate resistance to moisture or corrosion will lead to condensation in ducts, which could lead to the deterioration and collapse of ducts, which could lead to a reduction in airflow, which could lead to:

- the inadequate control of:
  - relative humidity or indoor air temperatures,
  - surface temperatures, or
  - air velocity,
- the inadequate delivery of warm air or the return of cold air, which could lead to an inability to maintain adequate indoor air temperatures, or
- inadequate ventilation, which could lead to the inadequate control of:
  - relative humidity, which could lead to condensation, which could lead to the growth of mould and mildew, or
  - airborne pollutants.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces, and
- the inadequate thermal comfort of persons.

This is to limit the probability of harm to persons.

[F81-OH1.1, OH1.2]

**Intent(s)**

**Intent 1.** To limit the probability that loose connections or unnecessary openings will lead to excessive air leakage, which could lead to:

- the inadequate delivery of warm air or the return of cold air, which could lead to:
  - an inability to maintain adequate indoor air temperatures, or
  - the inadequate control of:
    - relative humidity or indoor air temperatures, or
    - surface temperatures, or
- inadequate ventilation, which could lead to the inadequate control of:
  - relative humidity, which could lead to condensation, which could lead to mould and mildew growth,
  - airborne pollutants, or
  - indoor air temperatures.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces, and
- the inadequate thermal comfort of persons.

This is to limit the probability of harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OS3

### **Attributions**

[F81, F44-OS3.4]

### **Intent(s)**

*Intent 1.* To limit the probability that loose connections or unnecessary openings will lead to excessive air leakage, which could lead to a reduction in airflow, which could lead to insufficient combustion air for fuel-burning appliances, which could lead to incomplete combustion, which could lead to the entry of carbon monoxide gas into occupied space, which could lead to the acute poisoning or asphyxiation of persons.

---

### **Provision: 6.2.3.3.(2)**

---

### **Objective**

OS1

### **Attributions**

[F82-OS1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that a lack of access for cleaning will lead to an accumulation of combustible materials, which could lead to fire, which could lead to harm to persons.

---

### **Provision: 6.2.3.4.(1)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.5.4., which contains fire protection requirements for air duct systems.

---

### **Provision: 6.2.3.4.(2)**

---

### **Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.5.5., which contains fire protection requirements for piping systems.

---

### **Provision: 6.2.3.4.(3)**

---

### **Objective**

OH1

### **Attributions**

[F81-OH1.1, OH1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that inappropriate installation will interfere with the opening or closing of dampers, which could lead to an inability to balance the flow of intake and exhaust air, which could lead to:

---

## Intent Statements: NBC 2010

- the inadequate delivery of warm air or the return of cold air, which could lead to an inability to maintain adequate relative humidity or indoor air temperatures,
- inadequate ventilation, which could lead to the inadequate control of:
  - relative humidity, which could lead to condensation, which could lead to the growth of mould and mildew, or
  - airborne pollutants, or
- insufficient combustion air for fuel-burning appliances, which could lead to incomplete combustion.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces, and
- the inadequate thermal comfort of persons.

This is to limit the probability of harm to persons.

---

### Objective

OS1

### Attributions

[F81-OS1.1]

### Intent(s)

*Intent 1.* To limit the probability that inappropriate installation will interfere with the opening or closing of fire dampers or fire stop flaps, which could lead to an inability to retard the spread of fire and smoke to other parts of buildings, which could lead to harm to persons.

---

### Objective

OP1

### Attributions

[F81-OP1.1]

### Intent(s)

*Intent 1.* To limit the probability that inappropriate installation will interfere with the opening or closing of fire dampers or fire stop flaps, which could lead to an inability to retard the spread of fire and smoke to other parts of the building, which could lead to damage to the building.

---

## Provision: 6.2.3.5.(1)

---

### Objective

OH1

### Attributions

6.2.3.5.(1)(a) [F44, F81-OH1.2, OH1.3]

### Intent(s)

*Intent 1.* To limit the probability that inadequate drainage and access will lead to the accumulation of water in ducts, which could lead to:

- excessive relative humidity, or
- the accelerated deterioration of ducts.

This is to limit the probability of:

- the inadequate control of indoor air temperatures or relative humidity, or
- the entry of water into living space.

---

## **Intent Statements: NBC 2010**

This is to limit the probability of:

- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

### **Objective**

OH1

### **Attributions**

6.2.3.5.(1)(b) [F44, F81-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the entry of sewer gases into duct systems will lead to the distribution of sewer gases throughout the building, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

### **Objective**

OH1

### **Attributions**

6.2.3.5.(1)(c) [F44, F81-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that improper installation or the use of inappropriate materials will lead to performance that falls significantly below expectations, which could lead to:

- conditioned air not being delivered to designated locations, which could lead to:
  - an inability to maintain adequate indoor air temperatures or to control relative humidity, which could lead to condensation, which could lead to mould and mildew growth, or
  - an inadequate control of airborne pollutants, or
- in the case of ventilation systems, depressurization in buildings, which could lead to the spillage of combustion products from fuel-fired appliances.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

## **Provision: 6.2.3.5.(2)**

---

### **Objective**

OH1

### **Attributions**

[F81-OH1.1, OH1.2, OH1.3]

### **Intent(s)**

*Intent 1.* To limit the probability that an inability to drain or clean out the ducts will lead to the accumulation of moisture, which could lead to:

- the inadequate delivery of warm air or the return of cold air, which could lead to an inability to maintain adequate indoor air temperatures,
- inadequate ventilation, which could lead to the inadequate control of:
  - relative humidity, which could lead to condensation, which could lead to mould and mildew growth, or
  - airborne pollutants, or

- the entry of water into living space.

This is to limit the probability of:

- negative effects on the air quality of indoor spaces,
- the inadequate thermal comfort of persons, and
- contact with moisture.

This is to limit the probability of harm to persons.

---

**Provision: 6.2.3.6.(1)**

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.1.8.9., which contains requirements regarding the installation of fire dampers.

---

**Provision: 6.2.3.7.(1)**

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.2.4.13., which contains requirements regarding the prevention of smoke circulation by way of air handling systems.

---

**Provision: 6.2.3.8.(1)**

**Objective**

OH1

**Attributions**

[F44-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that combined exhaust ducts of nonmechanical ventilating systems serving separate rooms or spaces will lead to the transfer of contaminants among spaces, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Provision: 6.2.3.8.(2)**

**Objective**

OH1

**Attributions**

[F44-OH1.1]

**Intent(s)**

*Intent 1.* To exempt ducts serving similar occupancies from the application of Sentence 6.2.3.8.(1) and allow ducts to be combined at a point where contaminants are immediately exhausted to the outdoors and are unlikely to enter the ventilated occupancies.

This is to limit the probability of harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 6.2.3.8.(3)**

---

#### **Objective**

OH1

#### **Attributions**

[F81-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that condensation will accumulate in exhaust ducts, which could lead to:

- the blockage of ducts by ice buildup when temperatures are below the freezing point, which could lead to inadequate ventilation, or
- the growth of mould and mildew in ducts.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

#### **Objective**

OH1

#### **Attributions**

[F81-OH1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that:

- condensation will accumulate in exhaust ducts when temperatures are above the freezing point, or
- accumulated condensation will freeze in exhaust ducts when temperatures are below the freezing point, which could lead to the buildup of ice in the ducts, which could lead to ducts being blocked, which could lead to inadequate ventilation.

This is to limit the probability of the inadequate control of relative humidity or indoor air temperatures, which could lead to the inadequate thermal comfort of persons, which could lead to harm to persons.

### **Provision: 6.2.3.8.(4)**

---

#### **Objective**

OH1

#### **Attributions**

[F81-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that, under windy conditions, exhausted contaminants will re-enter the building, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

#### **Objective**

OH1

#### **Attributions**

[F81-OH1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that air will infiltrate the building when exhaust fans are not in operation, which could lead to the inadequate control of indoor air temperatures, which could lead to the inadequate thermal comfort of persons, which could lead to harm to persons.

---

**Provision: 6.2.3.8.(5)****Objective**

OH1

**Attributions**

[F81-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that:

- pollutants or water vapour will not be removed from the building, or
- when an exhaust system is not in operation and conditions of positive wind or stack effect pressure exist, airborne contaminants (e.g. exhaust fumes from a parking garage) will enter the building.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Provision: 6.2.3.8.(6)****Objective**

OH1

**Attributions**

[F81-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that, when an exhaust system is not operating and under conditions of positive stack effect pressure, airborne contaminants (e.g. exhaust fumes from a parking garage) will enter the building, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

*Intent 2.* To exempt certain situations from the application of Sentence 6.2.3.8.(5), where there is little risk of airborne contaminants entering the building.

---

**Provision: 6.2.3.8.(7)****Objective**

OS1

**Attributions**

[F81-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the connection of exhaust ducts from laundry drying equipment to other exhaust ducts or an inability to clean them will lead to a buildup of lint in exhaust ducts in the building, which could lead to fire, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 6.2.3.8.(8)**

---

#### **Objective**

OH1

#### **Attributions**

[F52-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the inappropriate design of the ventilation system will lead to dampness, which could lead to the growth of mould and mildew, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

#### **Objective**

OS1

#### **Attributions**

[F01-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the connection of exhaust ducts from laundry-drying equipment to other exhaust ducts will lead to a buildup of lint in exhaust ducts in the building, which could lead to fire, which could lead to harm to persons.

---

#### **Objective**

OP1

#### **Attributions**

[F01-OP1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the connection of exhaust ducts from laundry-drying equipment to other exhaust ducts will lead to a buildup of lint in exhaust ducts in the building, which could lead to fire, which could lead to damage to the building.

### **Provision: 6.2.3.8.(9)**

---

#### **Objective**

OH1

#### **Attributions**

[F52-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that inappropriate venting will lead to dampness, which could lead to the growth of mould and mildew, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Provision: 6.2.3.8.(10)**

**Objective**

OH1

**Attributions**

[F81-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that exhaust air containing moisture or odorous bacteria will transfer to other parts of the building, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Provision: 6.2.3.8.(11)**

**Objective**

OH1

**Attributions**

[F81, F44-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that exhaust air containing grease or moisture will transfer to other parts of the building, which could lead to the contamination of other spaces, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

[F81, F44-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that exhaust air containing grease will transfer to other parts of the building, which could lead to fire, which could lead to harm to persons.

---

**Provision: 6.2.3.8.(12)**

**Objective**

OH1

**Attributions**

[F81, F44-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the interconnection or connection of exhaust ducts or shafts serving various areas of buildings will lead to the transfer of exhaust air containing grease or moisture to other parts of buildings, which could lead to the contamination of other spaces, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

*Intent 2.* To exempt certain exhaust systems from the application of Sentences 6.2.3.8.(10) and 6.2.3.8.(11), where safeguards are provided to avoid cross-contamination between the contents of various ducts.

---

## **Intent Statements: NBC 2010**

### **Provision: 6.2.3.8.(13)**

---

#### **Objective**

OH1

#### **Attributions**

[F81-OH1.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that exhaust ducts will have inadequate thermal resistance, which could lead to the excessive cooling of exhaust ducts, which could lead to:

- the accumulation of condensation in exhaust ducts when temperatures are above the freezing point, or
- the freezing of accumulated condensation in exhaust ducts when temperatures are below the freezing point, which could lead to the buildup of ice in the ducts, which could lead to ducts being blocked, which could lead to inadequate ventilation.

This is to limit the probability of the inadequate control of relative humidity or indoor air temperatures, which could lead to the inadequate thermal comfort of persons, which could lead to harm to persons.

---

#### **Objective**

OH1

#### **Attributions**

[F81, F44-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that exhaust ducts will have inadequate thermal resistance, which could lead to the excessive cooling of exhaust ducts, which could lead to the freezing of water vapour that condenses on the interior surface of exhaust ducts, which could lead to:

- the blockage of ducts by ice buildup when temperatures are below the freezing point, which could lead to inadequate ventilation, or
- the growth of mould and mildew in ducts.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

### **Provision: 6.2.3.8.(14)**

---

#### **Intent(s)**

*Intent 1.* To direct Code users to Article 3.2.6.6., which contains requirements regarding the use of exhaust duct systems for smoke removal from a fire floor in high buildings.

### **Provision: 6.2.3.8.(15)**

---

#### **Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.4.3., which contains requirements regarding exhaust duct systems in fire compartments that are interconnected with exhaust ducts in vertical service spaces.

**Provision: 6.2.3.9.(1)**

---

**Objective**

OS1

**Attributions**

[F44-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that fire or smoke from one suite of care or residential occupancy will be transferred to other suites or to public corridors, which could lead to harm to persons.

---

**Objective**

OH1

**Attributions**

[F40-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that contaminants or odours from one suite of care or residential occupancy will be transferred to other suites or to public corridors, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

**Provision: 6.2.3.9.(2)**

---

**Objective**

OH1

**Attributions**

[F81, F44-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the interconnection of ductwork between the garage and other parts of the building will lead to the entry of gases, such as exhaust fumes from vehicles or other contaminants, into other parts of the building, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Objective**

OS1

**Attributions**

[F81, F44-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the interconnection of ductwork between the garage and other parts of the building will lead to the spread of fire and products of combustion from the garage to other parts of the building, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F81, F44-OP1.1]

**Intent(s)**

---

## **Intent Statements: NBC 2010**

*Intent 1.* To limit the probability that the interconnection of ductwork between the garage and other parts of the building will lead to the spread of fire from the garage to other parts of the building, which could lead to damage to the building.

---

### **Provision: 6.2.3.9.(3)**

#### **Objective**

OH1

#### **Attributions**

[F81, F44-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that exhaust ducts serving rooms containing water closets, urinals, basins, showers or slop sinks that exhaust through an enclosed storage garage will lead to the transfer of exhaust air containing moisture or odour-carrying bacteria to other parts of the building, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

### **Provision: 6.2.3.10.(1)**

#### **Intent(s)**

*Intent 1.* To direct Code users to Article 3.4.4.4., which contains requirements regarding the integrity of exits.

---

### **Provision: 6.2.3.11.(1)**

#### **Objective**

OH1

#### **Attributions**

[F50, F81-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability of:

- a reduction in exhaust air volume, which could lead to inadequate ventilation, or
- the depressurization of occupied space from which air is being exhausted, which could lead to the entry of combustion products from fuel-fired appliances into the building.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

#### **Objective**

OS3

#### **Attributions**

[F44, F81-OS3.4]

#### **Intent(s)**

*Intent 1.* To limit the probability of the excessive depressurization of the building, which could lead to the entry of carbon monoxide gas from fuel-fired appliances into the building, which could lead to harm to persons.

**Provision: 6.2.3.11.(2)**

---

**Objective**

OH1

**Attributions**

[F81-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that exhaust systems will operate without the introduction of make-up air, which could lead to the depressurization of occupied space from which air is being exhausted, which could lead to:

- a reduction in exhaust air volume, which could lead to inadequate ventilation, or
- the entry of combustion products from fuel-fired appliances into the building.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

[F81, F44-OS3.4]

**Intent(s)**

*Intent 1.* To limit the probability that exhaust systems will operate without the introduction of make-up air, which could lead to the depressurization of occupied space from which air is being exhausted, which could lead to the entry of carbon monoxide gas from fuel-fired appliances into the building, which could lead to harm to persons.

**Provision: 6.2.3.11.(3)**

---

**Objective**

OH1

**Attributions**

[F81-OH1.2]

**Intent(s)**

*Intent 1.* To limit the probability that cold outdoor air will enter occupied parts of the building, which could lead to the inadequate control of relative humidity or indoor air temperatures, which could lead to the inadequate thermal comfort of persons, which could lead to harm to persons.

**Provision: 6.2.3.12.(1)**

---

**Objective**

OS3

**Attributions**

[F30-OS3.1]

**Intent(s)**

*Intent 1.* To limit the probability that persons will inadvertently introduce fingers into the equipment, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OH1

### **Attributions**

[F81-OH1.2]

### **Intent(s)**

*Intent 1.* To limit the probability that objects will be introduced into supply, return or exhaust air openings, which could lead to damage to the mechanical equipment, which could lead to the shutdown of equipment, which could lead to the inadequate thermal comfort of persons, which could lead to harm to persons.

---

### **Provision: 6.2.3.12.(2)**

---

### **Objective**

OH1

### **Attributions**

[F81-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the inappropriate design or location of outdoor air intakes or exhaust outlets at the exterior of buildings will lead to the introduction of contaminated outdoor air into buildings, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

### **Objective**

OS3

### **Attributions**

[F81, F44-OS3.4]

### **Intent(s)**

*Intent 1.* To limit the probability that the inappropriate design or location of outdoor air intakes or exhaust outlets at the exterior of buildings will lead to the introduction of pollutants, such as carbon monoxide gas, into buildings, which could lead to harm to persons.

---

### **Provision: 6.2.3.12.(3)**

---

### **Objective**

OH1

### **Attributions**

[F81-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that:

- a lack of shielding will lead to the entry of water from rain or melting snow into the system, or
- a lack of screens, or screen mesh that is too large, will lead to the entry of birds or animals into the building, which could lead to damage to equipment.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

**Provision: 6.2.3.12.(4)**

---

**Objective**

OH1

**Attributions**

[F82, F81-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability of an inability to clear blocked or damaged screens, which could lead to:

- a reduction in exhaust air volume, which could lead to inadequate ventilation, which could lead to the inadequate control of:
  - relative humidity, which could lead to condensation, which could lead to the growth of mould and mildew, or
  - airborne pollutants, or
- for outdoor air intakes, the depressurization of occupied space from which air is being exhausted, which could lead to the entry of combustion products from fuel-fired appliances into the building.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Objective**

OS3

**Attributions**

[F82-OS3.4]

**Intent(s)**

*Intent 1.* To limit the probability of an inability to clear blocked or damaged outdoor air intake screens, which could lead to the depressurization of occupied space from which air is being exhausted, which could lead to the entry of carbon monoxide gas from fuel-fired appliances into the building, which could lead to harm to persons.

**Provision: 6.2.3.12.(5)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.5.7., which contains requirements regarding combustibility.

**Provision: 6.2.3.13.(1)**

---

**Objective**

OS1

**Attributions**

[F80-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that performance, with respect to flammability and smoke development classification, will fall below expectations, which could lead to fire, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OP1

### **Attributions**

[F80-OP1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that performance, with respect to flammability, will fall below expectations, which could lead to fire, which could lead to damage to the building.

---

## **Provision: 6.2.3.13.(2)**

---

### **Objective**

OS3

### **Attributions**

[F30-OS3.3]

### **Intent(s)**

*Intent 1.* To limit the probability that electrostatic filters will remain energized during filter inspection or removal, which could lead to electric shock, which could lead to harm to persons.

---

### **Objective**

OH1

### **Attributions**

[F81, F43-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that electrostatic filters will remain energized after air flow has been stopped, which could lead to an electric discharge, which could lead to the creation of ozone gas, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

## **Provision: 6.2.3.13.(3)**

---

### **Objective**

OH1

### **Attributions**

[F82-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that dust will accumulate on the adsorbing surface, which could lead to the equipment losing its capacity to remove odours, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

**Provision: 6.2.3.13.(4)**

---

**Objective**

OH1

**Attributions**

[F82-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that dirty water will contaminate the filters when filters are washed in place, which could lead to an inability to remove contaminants or odours from the air stream, which could lead to negative effects on the air quality of indoor spaces, which could lead to harm to persons.

**Provision: 6.2.3.14.(1)**

---

**Objective**

OS1

**Attributions**

[F80, F81-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the use of inappropriate materials for filters or water evaporation media will lead to fire or smoke, which could lead to harm to persons.

**Objective**

OP1

**Attributions**

[F80, F81-OP1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the use of inappropriate materials for filters or water evaporation media will lead to fire or smoke, which could lead to damage to the building.

**Provision: 6.2.3.14.(2)**

---

**Objective**

OH1

**Attributions**

[F82-OH1.1]

**Intent(s)**

*Intent 1.* To limit the probability that inappropriate construction or installation will lead to an inability to flush or drain sumps for air washer and evaporative cooling sections, which could lead to the accumulation of moisture or dirt in the air stream, which could lead to the growth of mould, mildew or bacteria, which, if circulated in the air stream, could lead to negative effects on the air quality of indoor spaces.

This is to limit the probability of harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 6.2.3.14.(3)**

---

#### **Objective**

OS1

#### **Attributions**

[F01, F81-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that the performance of evaporative cooling sections or towers in a fire will fall significantly below expectations, which could lead to a fire hazard, which could lead to harm to persons.

### **Provision: 6.2.3.15.(1)**

---

#### **Objective**

OH1

#### **Attributions**

[F81, F44-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that an inappropriate location or installation of fans will lead to:

- zones of depressurization in the building, which could lead to the spillage of combustion products from fuel-fired appliances, and
- the distribution of contaminants that might be present in boiler or furnace rooms by entraining them in the air being circulated in ductwork serving the building.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

#### **Objective**

OS3

#### **Attributions**

[F81, F44-OS3.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that an inappropriate location or installation of fans will lead to zones of depressurization in buildings, which could lead to the spillage of carbon monoxide gas from fuel-fired appliances, which could lead to harm to persons.

### **Provision: 6.2.3.15.(2)**

---

#### **Objective**

OH1

#### **Attributions**

[F81-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that an inappropriate type of fan or associated air handling equipment will be unable to withstand expected weather conditions, which could lead to failure, which could lead to:

- an inability to maintain adequate indoor air temperature or to control relative humidity, which could lead to condensation, which could lead to the growth of mould and mildew, or
- the inadequate control of airborne pollutants.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

---

**Provision: 6.2.3.16.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.5.2., which contains requirements regarding vibration isolation connectors.

---

**Provision: 6.2.3.17.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.5.3., which contains requirements regarding the flame resistance of tape used for sealing joints in air ducts, plenums and other parts of air duct systems.

---

**Provision: 6.2.3.18.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.5.5., which contains requirements regarding insulation and coverings on pipes.

---

**Provision: 6.2.3.19.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.5.6., which contains requirements regarding clearances for ducts and plenums.

---

**Provision: 6.2.3.20.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.5.8., which contains requirements regarding return air systems.

---

**Provision: 6.2.3.20.(2)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Article 3.6.4.3., which contains requirements regarding ceiling spaces used as return-air plenums.

---

[F44-OS3.4]

**Intent(s)**

*Intent 1.* To limit the probability of carbon monoxide gas entering living space undetected, which could lead to the acute poisoning or asphyxiation of persons.

*Intent 2.* [Clause (a)] To limit the probability that the carbon monoxide alarming devices will not be loud enough to wake sleeping occupants, which could lead to carbon monoxide gas entering living space undetected, which could lead to the acute poisoning or asphyxiation of persons.

*Intent 3.* [Clause (b)] To limit the probability that carbon monoxide gas will not be detected at or near its source, which could lead to carbon monoxide gas entering living space undetected or with less than the maximum possible warning time for occupants, which could lead to the acute poisoning or asphyxiation of persons.

**Provision: 6.2.4.1.(5)**

---

**Objective**

OS3

**Attributions**

[F44-OS3.4]

**Intent(s)**

*Intent 1.* To limit the probability of carbon monoxide gas entering living space undetected, which could lead to the acute poisoning or asphyxiation of persons.

*Intent 2.* To limit the probability that carbon monoxide alarming devices will not be loud enough to wake sleeping occupants, which could lead to carbon monoxide gas entering living space undetected, which could lead to the acute poisoning or asphyxiation of persons.

**Provision: 6.2.5.1.(1)**

---

**Intent(s)**

*Intent 1.* To direct Code users to Section 3.6., which exempts fuel-fired appliances in dwelling units from being enclosed in a fire-separated service room.

**Provision: 6.2.5.2.(1)**

---

**Objective**

OP1

**Attributions**

[F81-OP1.1]

**Intent(s)**

*Intent 1.* To limit the probability that the installation of fuel-fired appliances that are not designed for the application will lead to the malfunction of such appliances, which could lead to fire, which could lead to damage to the building.

---

## **Intent Statements: NBC 2010**

---

### **Objective**

OH1

### **Attributions**

[F81-OH1.1]

### **Intent(s)**

*Intent 1.* To limit the probability that the installation of fuel-fired appliances that are not designed for the application will lead to:

- performance that is significantly below expectations, which could lead to:
  - an inadequate delivery of warm air, which could lead to an inability to maintain adequate indoor air temperatures, or
  - inadequate ventilation, which could lead to the inadequate control of:
    - airborne pollutants, or
    - relative humidity, which could lead to condensation, which could lead to the growth of mould and mildew, or
- blockage of vents by ice or snow, which could lead to an inability to vent combustion products, which could lead to the entry of combustion products into occupied space.

This is to limit the probability of negative effects on the air quality of indoor spaces, which could lead to harm to persons.

### **Provision: 6.2.9.1.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F20-OS3.2, OS3.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that piping in heating and cooling systems that are subjected to pressure or the temperature of the medium will rupture, which could lead to harm to persons.

### **Provision: 6.2.9.1.(2)**

---

#### **Objective**

OH1

#### **Attributions**

[F21-OH1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that an inadequate allowance for the expansion and contraction of pipes due to temperature changes under service conditions will lead to stress in pipes, which could lead to pipe or equipment failure, which could lead to the entry of refrigerant gases into occupied space, which could lead to negative effects on the air quality of indoor spaces.

This is to limit the probability of harm to persons.

### **Provision: 6.2.9.1.(3)**

---

#### **Objective**

OS2

#### **Attributions**

[F20-OS2.2]

#### **Intent(s)**

*Intent 1.* To limit the probability that, under gravity loads imposed by piping or under loads imposed by the expansion or contraction of piping, the building's structural elements will deflect or fail, which could lead to harm to persons.

### **Provision: 6.2.9.2.(1)**

---

#### **Objective**

OS3

#### **Attributions**

[F20, F30-OS3.2, OS3.4]

#### **Intent(s)**

*Intent 1.* To limit the probability that materials that are inappropriate for the application will have inadequate resistance to high temperatures or to mould or mildew, which could lead to the accelerated deterioration of the insulation and coverings on pipes, which could lead to hot or cold pipes being exposed, which could lead to harm to persons.

**Provision: 6.2.9.2.(2)**

---

**Objective**

OS3

**Attributions**

[F31-OS3.2]

**Intent(s)**

*Intent 1.* To limit the probability that the hot surface of the pipes will be exposed, which could lead to harm to persons.

**Provision: 6.2.9.3.(1)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that inadequate clearances will lead to the ignition of combustible materials by heat radiating from hot pipes, which could lead to harm to persons.

**Objective**

OP1

**Attributions**

[F01-OP1.1]

**Intent(s)**

*Intent 1.* To limit the probability that inadequate clearances will lead to the ignition of combustible materials by heat radiating from hot pipes, which could lead to damage to the building.

**Provision: 6.2.9.4.(1)**

---

**Objective**

OS3

**Attributions**

[F31-OS3.2]

**Intent(s)**

*Intent 1.* To limit the probability that radiators will have an exposed hot surface, which could lead to harm to persons.

**Provision: 6.2.9.5.(1)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.1]

**Intent(s)**

OP1

#### **Attributions**

[F01-OP1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that hot ash will get spilled, which could lead to the ignition of combustible materials, which could lead to damage to the building.

### **Provision: 6.2.12.1.(1)**

---

#### **Intent(s)**

*Intent 1.* To state the application of Subsection 6.2.12.

**Provision: 6.2.12.2.(1)**

---

**Objective**

OS1

**Attributions**

[F01-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that vapours and particles will accumulate to ignitable concentrations in areas where they can be in the presence of ignition sources, which could lead to a fire or explosion, which could lead to harm to persons.

---

**Objective**

OP1

**Attributions**

[F01-OP1.1]

**Intent(s)**

*Intent 1.* To limit the probability that vapours and particles will accumulate to ignitable concentrations in areas where they can be in the presence of ignition sources, which could lead to a fire or explosion, which could lead to damage to the building.

---

**Objective**

OP1

**Attributions**

[F02-OP1.2]

**Intent(s)**

*Intent 1.* To limit the probability that combustible or reactive deposits will accumulate, which could lead to an increase in the combustible content and fire severity, which could lead to the spread of a fire in the laboratory to other parts of the building, which could lead to damage to the building.

---

**Objective**

OS1

**Attributions**

[F02-OS1.2] [F81, F82-OS1.1]

**Intent(s)**

*Intent 1.* To limit the probability that combustible or reactive deposits will accumulate, which could lead to an increase in the combustible content and fire severity, which could lead to the spread of a fire in the laboratory to other parts of the building, which could lead to harm to persons.

*Intent 2.* To limit the probability that combustible or reactive deposits will accumulate, which could lead to obstruction of the ventilation system and reduction of its exhaust capacity, which could lead to an explosive atmosphere, which in the presence of a source of ignition could lead to a fire or explosion, which could lead to harm to persons.

*Intent 3.* To limit the probability that combustible or reactive deposits will accumulate on the blades of the exhaust fan, which could lead to its misalignment or improper operation, which could lead to the generation of sparks or heat and the ignition of deposits or explosive vapours or mists, which could lead to a fire or explosion, which could lead to harm to persons.

---

## **Intent Statements: NBC 2010**

### **Provision: 6.2.12.2.(2)**

---

#### **Objective**

OS1

#### **Attributions**

[F11, F81-OS1.1]

#### **Intent(s)**

*Intent 1.* To limit the probability that insufficient ventilation will lead to the accumulation of vapours and particles to ignitable concentrations or as combustible deposits in areas where they can be ignited, which could lead to a fire or explosion, which could lead to harm to persons.

### **Provision: 6.2.12.2.(3)**

---

#### **Intent(s)**

*Intent 1.* To direct Code users to Article 5.5.4.1. of Division B of the NFC for requirements regarding the maintenance of ventilation systems in laboratories.

### **Provision: 6.2.12.3.(1)**

---

#### **Objective**

OS1
